**Continue**

DateTime is a common utility in Android. These days, most of the project requires a date and time formatting in Android. So we build a fork and play solution. I hope every developer will keep this utility in their own mailbox to save goal time. In this tutorial we demonstrate the different date formatting and parsingSimpleDateFormat is a Java class that expands the DateFormat Java class. It is used to normalize, format and pars date in a sensitive way. SimpleDateFormat is used for the lower utility in AndroidFormatting - This allows you to format the text date in Android any given language. Review - You can disassemble any text in the date of the object using SimpleDateFormatatSome a specific letter used to represent the date or time of the component in Android. You can read The official Google website. FormattingHere we discuss some date format my intention is to cover each combination of the date format. DATE\_FORMAT\_1 h: mm exit will be -: 10:37 am DATE\_FORMAT\_2 and h: mm exit will be -: 10:37 am DATE\_FORMAT\_3 yy-mm-dd Exit will be -: 2018-12-05 DATE\_FORMAT\_4 y dd-MMMM-yyyy exit will be -: 05-December-2018 DATE\_FORMAT\_5 - dd MMMM yyyyyy Exit will be -: 05 December 2018 DATE\_FORMAT\_6 - dd MMMM yyyy zzzz Exit will be -: 05 December 2018 UTC DATE\_FORMAT\_7 'yy Exit will be -: Swich, December 5, '18 DATE\_FORMAT\_8 - yyyy-MM-dd HH:mm:ss Exit will be -: 2018-12-05 10:37 :43 DATE\_FORMAT\_9 and Am:mmd MMMM yyyy Exit will be -: 10:37am 05 December 2018 DATE\_FORMAT\_10 - K:mm a, z Exit will be -: 10:37 a.m., UTC DATE\_FORMAT\_11 hh 'o'clock'a, zzzz Exit will be -: 10 a.m. , UTC DATE\_FORMAT\_12 and yyyy-MM-ddTH:mm:ss. SSS's Exit will be -: 2018-12-05T10:37:43.937 DATE\_FORMAT\_13 e, dd MMM yyyy HH:mm:ss exit will -: Svi, 05 December 2018 10:37:43 UTC DATE\_FORMAT\_14 yyyyy. MM.dd G 'on' HH:mm:ss z Exit will be -: 2018.12.05 AD at 10:37:43 UTC DATE\_FORMAT\_15 and yyyyyyy. MMMMM.dd GGG hh:mm aaa Exit will be -: 02018.D.05 AD 10:37am DATE\_FORMAT\_16 EEE, d MMM yyyy HH:mm:ss: Exit will be -: St., 5 December 2018 10:37:43 0000 DATE\_FORMAT\_17 yyyy-MM-dd'HH:mm:ss. SSS' Exit will be -: 2018-12-05T10:37:43.946'0000 DATE\_FORMAT\_18 yyyy-MM-dd'T'HH:mm:ss. SSSXXX Exit will be -: 2018-12-05T10:37:43.949 DATE\_FORMAT\_19 - dd-MMM-yyyy exit will be -: 05-December-2018All combinations of the format of the above date. Now comes the utility class. Get the current DateExample 1/y default date format / public static final lines DATE\_FORMAT\_2 and dd-MMM-yyyy; public static line getDate () - SimpleDateFormat dateFormat - new SimpleDateFormat (DATE\_FORMAT\_1); dateFormat.setTimezone (Timezone.getTimezone (UTC)); Today's date is Calendar.getInstance. Return dateFormat.format (today); Get the current timeExample 2/ - format default / public static final line line hh:mm a; getCurrentTime public static line - SimpleDateFormat dateFormat - new SimpleDateFormat (DATE\_FORMAT\_1); dateFormat.setTimezone (Timezone.getTimezone (UTC)); Today's date is Calendar.getInstance. Return dateFormat.format (today); Get a date and time from TimestampExample 3 / - @param times in milliseconds (TimestFormamp) - @param mDateFormat SimpleDateFormat - @return - public static line getDateFromTimestamp (Long time, MDateFormat) - SimpleDateFormat dateFormat dateFormat.setTimezone (Timezone.getTimezone (UTC)); DateTime - new date (time); Return dateFormat.format (date); How to use it / Get an example of the current date 1 q/ String mCurrentDate - DateUtils.getCurrentDate (); / - Get an example of the current time 2 q/ String mCurrentTime - DateUtils.getCurrentTime (); An example of date format 3 / public static final string DATE\_FORMAT and dd-MMM-yyyy; mDateTime line - DateUtils.getDateFromTimestamp (System.currentTimeMillis, DATE\_FORMAT);D Ate Review in AndroidLet take a few examples of date parsingGete Timestamp from DateTime in AndroidExample 4 / Get Timestamp from date and @param time Time Date Row - @param mDateFormat Date Format No @return - @throws ParseException - Public Static Long GetTimeTampFromDTime (StringTime, String mDateFormat) throws ParseException - SimpleDateFormat dateFormat - new SimpleDateFormat (mDateFormat); dateFormat.setTimezone Date date - dateFormat.parse (mDateTime); Return date.getTime Get DateTime from Date Example 5/ Return Date Strings from Object Date - @param mDateFormat Date Format - @param Object Date, which you want to make out - @return Conversion DateTime String to another format DateTime StringIt is a very useful and confusing utility in AndroidExample 6 / Conversion of one date format line to another date format in Android - @param inputDateFormat InputFormat SimpleDate - @param outputDateFormat Output SimpleDateFormat - @param inputDate @throws input The line inputDate) throws ParseException - Date mParsedDate; MOutputDateString line; SimpleDateFormat mInputDateFormat - new SimpleDateFormat (inputdDateFormat, java.util.Locale.getDefault()); SimpleDateFormat mOutputDateFormat - new SimpleDateFormat (exitDateFormat, java.util.Locale.getDefault()); mParsedDate - mInputDateFormat.parse (inputDate); mOutputDateString - mOutputDateFormat.format (mParsedDate); return mOutputDateString; How to use / Date Format Example 4 / Public Static Final DATE\_FORMAT HH:mm:ss; Строка mDateTimeString - 2018-12-05 10:37:43; попробуйте - длинный mTimestamp - DateUtils.getTimeStampFromDateTime (mDateTimeString, DATE\_FORMAT); - улов (ParseException e) DATE\_FORMAT - e.printStackTrace (); Строка mDateTime - DateUtils.getDateFromDate (DATE\_FORMAT, Calendar.getInstance ().getTime ()); / - Пример 6 - Формат ввода DateTime - общедоступный статический финальный струнный DATE\_INPUT\_FORMAT - yyyy-MM-dd HH:mm:ss; /B - Формат выхода DateTime - публичный статический заключительный струнный DATE\_OUTPUT\_FORMAT - dd-MMM-yyyy; Строка mDateTimeString - 2018-12-05 10:37:43; Строка mDateTime - нулевой; попробовать - mDateTime - DateUtils.getDateFromDateString (DATE\_INPUT\_FORMAT, DATE\_OUTPUT\_FORMAT, mDateTimeString); Выход - 05-декабрь-2018; Полная утилита кажется нижеpackage com.android.wave.datetimetools.utils; импортировать android.text.format.DateFormat; импортировать java.text.ParseException; импортировать java.text.SimpleDateFormat; импортировать java.util.Calendar; импортировать java.util.Date; импортировать java.util.Timezone; публичный класс DateUtils - частная статическая финальная строка TAG - DateUtils; публичная статическая финальная строка DATE\_FORMAT\_1 - hh:mm a; публичная статическая финальная строка DATE\_FORMAT\_2 - h:mm a; публичная статическая финальная строка DATE\_FORMAT\_3 - yyyy-MM-dd; публичная статическая финальная строка DATE\_FORMAT\_4 - dd-MMMM-yy; публичная статическая финальная строка DATE\_FORMAT\_5 - dd MMMM yyyyy; публичная статическая финальная строка DATE\_FORMAT\_7 строка DATE\_FORMAT\_6 - dd MMMM yyyy zzzz; MMM d, "yy; публичная статическая финальная строка DATE\_FORMAT\_8 - yyyy-MM-dd HH:mm:ss; публичная статическая финальная строка DATE\_FORMAT\_9 - h:mm a dd MMMM yyyyy; публичная статическая финальная строка DATE\_FORMAT\_10 - K:mm a, z; публичная статическая строка DATE\_FORMAT\_11 , zzzz; публичный статический финальный струнный DATE\_FORMAT\_12 - yyyy-MM-dd'T'HH:mm:ss. CCC3; публичный статический финальный струнный DATE\_FORMAT\_13 E, dd MMM yyyy HH:mm:ss z; публичная статическая заключительная струнная DATE\_FORMAT\_14 и yyyy. MM.dd G 'at' HH:mm:ss z; публичная статическая заключительная струнная DATE\_FORMAT\_15 - yyyyy. MMMMM.dd GGG hh:mm aaa; публичный статический финальный струнный DATE\_FORMAT\_16 - EEE, d MMM yyyy HH:mm:ss; публичный статический финальный струнный DATE\_FORMAT\_17 yyyy-MM-dd'T'HH:mm:ss. CCC3; публичный статический финальный струнный DATE\_FORMAT\_18 yyyy-MM-dd'T'HH:mm:ss. SSSXXX; публичная статическая строка getCurrentDate () - SimpleDateFormat dateFormat - новый SimpleDateFormat (DATE\_FORMAT\_1); dateFormat.setTimezone (Timezone.getTimezone (UTC)); Дата сегодняшнего дня - Calendar.getInstance ().getTime (); дата возвращенияФормат.формат (сегодня); - публичная статическая строка getCurrentTime () - SimpleDateFormat dateFormat dateFormat.setTimezone (DATE\_FORMAT\_1); dateFormat.setTimezone (UTC)); Today's date is Calendar.getInstance. Return dateFormat.format (today); }/\*\* \* Timestamp - @param mDateFormat SimpleDateFormat - public static line getDateFromTimestamp (Long Time, String mDateFormat) - SimpleDateFormat dateFormat - new SimpleDateFormat (mDateFormat); dateFormat.setTimezone. DateTime - new date (time); Return dateFormat.format (date); - Get time stamp from date and time - @param mDateTime datetime String - @param mDateFormat Date Format - @throws ParseException - public static long getDateFromDateTime (String mDateTime, String mDateFormat) throws ParseException - SimpleDateFormat dateFormat.dateFormat.setTimezone (Timezone.getTimezone (UTC)); Date date - dateFormat.parse (mDateTime); Return date.getTime In /- Date date line from date object - date format @param mDateFormat date - date object @param you want to disassemble - public static format StringDateTimeFromDate (String mDateFormat, Date) - if (date) - return zero; - Conversion of one date line to another date line in Android - @param inputDateFormat Input SimpleDateFormat - @param outputDateFormat Output SimpleDateFormat - @param inputDate input Date String - @throws ParseException - public static StringDate format Line mOutputDateString; SimpleDateFormat mInputDateFormat - new SimpleDateFormat (inputdDateFormat, java.util.Locale.getDefault()); SimpleDateFormat mOutputDateFormat - new SimpleDateFormat (exitDateFormat, java.util.Locale.getDefault()); mParsedDate - mInputDateFormat.parse (inputDate); mOutputDateString - mOutputDateFormat.format (mParsedDate); return mOutputDateString; } } convert milliseconds to time android. how to get current time in milliseconds in android. convert time in milliseconds to date android. android format milliseconds to time. android time milliseconds to date. how to print time in milliseconds in android
