I have previously discussed how to get an email me.com free. Setting up iCloud on iOS and OS X is pretty simple because it's already integrated. What if we want to install it on Windows or even Android? Windows To make iCloud settings in Windows, Apple already provides the installation of the iCloud control panel. With this, you can set up mail, contacts, calendars, bookmarks and photo streams. For mail, contacts, and calendars, you need to set Outlook 2007 or later. For bookmarks, you must have Safari 5.1.1 or Internet Explorer 8 installed before the latest version. Download: iCloud Control Panel.AndroidApple doesn't support iCloud settings on Android, but you can still install iCloud Mail. Here are the settings steps: Open the default email app from the OS and go to new account settings, to fill in the no.me.com email address and select 'Manual Setup'For incoming mail server settings:Choose the IMAP's server field from 'p07-imap.mail.me.com'Port: 993Security Type: SSLFor Outgoing Mail Server Settings (SMTP): Fill the SMTP server box with 'smtp.me.com': 587Security: Type Fill in the username and password (the username Complete full email address) Follow the instructions on the next screen until iCloud Mail is used on your Android device. The above iCloud Mail settings can be applied to other IMAP-enabled devices. Also access MakeMac through MM Reader for iPhone How to access photos contained in iCloud for Android.tirto.id users - iCloud is a service for storing photos, videos, documents, music and other applications created for apple inc product devices. With iCloud, users can easily share photos, calendars, locations, and more. Even iCloud can also be used to find lost devices. To get started with iCloud, users must enter their Apple ID on their Mac and iOS or iPadsOS, Apple Watch, Apple TV and Windows computers. But if the user no longer uses Apple products, they can still access iCloud in other apps, such as Android. Here's how to access iCloud on Android reported from Life Wire according to the menu you want to access. How to access photos found in iCloud on Android First, log into a user account and touch photos so that the user can access all the photos and videos contained in iCloud. Another easy way if the user still has an iPhone is to download Google Photos found on iOS and then sync all the photos in Google Photos because by syncing on Google Photos Automatically, the photo will be on the user's android. 2. How to access iCloud Email on Android If to have an Apple email account @mac, @me or @iCloud, users can still use it in the Gmail app with steps below. First open Gmail and click the menu button located in the top left left click add account, then still Enter the iCloud email address and select the following password type and click the following Wait until Gmail completes the process before users with can access iCloud in Andorid 3. Using the iCloud Calendar and contacts on Android Unfortunately, this can only be done through your iPhone or iPad and computer before using it, log into your iCloud account for a faster process. Go to settings on your iPhone or iPad and tap your contacts and calendar. To access it with your computer, open the Internet and open the www.icloud.com then log in to the user account, and then follow the link below. In the left glass, click the shared data calendar button, which is next to the calendar that the user wants to export. On another page, select a shared calendar, then click on the copy link and select OK Open the new tab, then insert the copied URL Change webcal at the beginning of the URL to http and click enter. While you're waiting, save the file in your chosen name folder as the user wants. Open and enter the Google Calendar located in the web browser In the left glass of the Google calendar, click on the menu arrow to the right of the other calendar, click on the imported calendar Select calendar calendar, which will be exported, which was previously downloaded from iCloud Select import button to download the file If the import process is completed, the user must see the imported entry in the web calendar Of Google and on the user's android device. Although it can access iCloud via Android, users can't even use iCloud on Android, according to the Android Authority. Users can't access reminders and tagged on iCloud android. Read more: Source: Android Central If you switch to an Android device with an iPhone or iPad, there is a possibility that you have already set up and use an iCloud email address. Android devices require you to have a Google account (Gmail), but you can continue to use your iCloud account for email, and that's fine. Here's how to add your iCloud email address to your Android device. How to add an iCloud email address to Android Since Apple provides two-factor authentication (2FA) by default on your iCloud account, the easiest way to set up an iCloud email on your Android device is to first create a password for your iCloud email address. How to create a password for iCloud record Run a web browser on your computer. Go to appleid.apple.com and log in using an Apple ID. Click Create Password ... Security. Type Type name for the password. I used Android Email. Click Create. Notice the password that was created. You'll need it to set up iCloud email on your Android phone. Source: Android Central How to add your iCloud email address to your Android phone Swipe down from the top of the screen to reveal the shade of the notification. Click the settings button. This is the gear icon in the top right. Click the account (or variation that, depending on who made your phone). Click Add account below. Source: Android Central Tap Personal (IMAP). He should have the Gmail logo next to it. Enter your iCloud email address. Click on. Enter the password created in a web browser. Click on. Source: The Android Central Your iCloud email account will now appear on your account list and you will be able to access your iCloud inbox in the Gmail app. Our best hardware picks one of the best Android smartphone deals If you like getting a good bang-for-your-dollar, you'll love Moto G Power. It has robust performance, a large Full HD display with minimal framing, and clean Android 10 software. The icing on the cake is a 5000 mAh battery that allows up to three days of use on a single charge. Ben Stockton If you switch from iPhone to Android, you don't have to ditch iCloud services like iCloud Mail. While Apple doesn't make it easy to set up, you can log in and use your iCloud email address on Android. While we recommend Gmail, you should be able to add your iCloud email address to most email apps. Before you start creating an App-Specific password for iCloud, you need to set up an iCloud account. Apple's two-factor authentication usually makes it difficult to register third-party apps, but Apple allows you to create a separate password for specific apps for use on Android. First, sign up to your Apple account and scroll to the Security section. Under the Password button for specific apps, click create a password. If you don't see this section, you should set up two-factor authentication in your Apple account. To do this, you need a recent Mac, iPhone or iPad. ANSWER: How to set up two-factor authentication for your Apple ID Provide a short but memorable description of that password (like Android login in) and then click Create. Save the password that Apple generates for you; You'll need to use this instead of an Apple ID password to complete the login process. Set up iCloud Email Access for Gmail With a separate app password you're ready to sync iCloud email with Gmail - the default email app for most people who own Android. Remember that this process should also work for other email customers, however; we cover more about what's below. First, swipe down from the top of the device to access the notification shadow, and then tap the gear icon. In addition, you can Android settings from the app drawer. In the main settings menu, click Accounts. Depending on your device and the Android version it works for, it may have a slightly different name like Accounts and Backup. If you're using a Samsung device, click the Accounts again in the next menu. For other Android devices, you should be able to skip this step. You see a list of accounts synchronized with your device. Scroll down and click Add account. Choose Personal (IMAP) with the Gmail symbol next to it. The Gmail registration screen is displayed. Use your iCloud email address and then click next. Use the password you generate for you (not the Apple ID password) and then click next. If your email address and password are correct, Android (via Gmail) is in the head and starts syncing your iCloud email account with your device. You may need to confirm some additional settings, such as how often you want Gmail to sync your email. To see if the process is working, start the Gmail app and then click the menu button in the top left version. You should see your iCloud email account with others; click on it to switch to it in Gmail. You can now use your iCloud email address to send and receive emails. Use Microsoft Outlook or other email apps that you don't have to use the Gmail app to get iCloud email on Android. There are other alternatives, such as Microsoft Outlook. The customization process is similar, no matter which app you choose. In the Outlook app, for example, click on the burger menu and then tap the add account icon (an envelope with a plus sign in the corner). Here, click the iCloud email address and then click On. Outlook automatically detects that you're signing up with an iCloud account, so you don't have to do anything else. Enter the password and then tap the check mark in the upper right-right right to enter it. You should now be able to view and send emails from your iCloud email address. If you want to use another email app, look for an IMAP registration option when you sign up for your account or iCloud option. Use your generated password to complete the registration process and you should be able to use iCloud email as if you were on an iOS or Mac device. Device.
