Although the Google Play Store has over a million apps that you can install on an Android device, the market sometimes removes popular software from its catalog such as Grooveshark Mobile and Adobe Flash Player. However, you don't have to download apps only from the official market; You can set up your device to download installation packages or APK files from elsewhere. To download a package from an email app and install it on Android, you need to download and use a third-party program. Open The Settings from the app screen or notification bar, and then tap Security. Scroll down to the device's administration and then check the Unknown Sources option. Download the attachment from your email app or mobile browser, and then open the Google Play Store from the Home or Apps screen. Search and then install Apk Installer Graphilos Studio from the Play Store. Open the app to complete the installation, and then review the folder containing the downloaded package. Select the APK file from the file manager, and then tap the Package Installer to start the setup. Follow the tips on the screen to install APK content on your smartphone. Open The Settings from the app screen or notification bar, and then tap Security. Scroll down to the device's administration and then check the Unknown Sources option. Download the attachment from your email app or mobile browser, and then open the Google Play Store from the Home or Apps screen. Search and then install Apk Installer by Array Infotech from the Play Store. Open the app when the installation is complete and then select the appropriate package from the list. Tap Set and then touch installing packages from a pop-up. Follow the APK on the device. The default source for Android 4.x apps is the Google Play Store, but Google restricts apps to certain phones based on location and known compatibility. In addition, some developers do not offer their apps in the Google Play Store and require you to manually download the Android Package (APK). Once the APK file is on your phone transfer it to your phone to manually install the app using the Android App App. Insert the smaller end of your Android's USB cable in port on your Android phone. Connect the other end of the USB charging cable to a standard USB port on your computer. Click Start and then click Windows Explorer. Double-click your Android phone from the Portable Devices section and then tap the SD Card button to access your phone's memory card. Drag and drop APK files anywhere on the SD map to move them. Click on the USB icon in the Windows 7 notification area and select Eject your android device before disabling the cable. If you don't see the USB icon, click on the small arrow to the left of the notification area. Microsoft announced its plans to bring Cortana a virtual assistant for Android a few months ago, and a beta version of the app was slated to launch sometime this month. An early copy of the app is leaked to the internet today and you can download it through the Google Drive link below. Just keep in mind that since this file does not come directly from Microsoft or anyone associated with the company, you need to download and install at your own risk. If you're even familiar with Cortana on Windows 10 or Windows Phone, you'll be right at home here. Once you run the app for the first time and enter a few pieces of information, you can start using Cortana just like you would Google Now or Siri. Microsoft's voice assistant can help you plan events, update you on local news, weather, sports, and more. This version of the app seems to be fairly stable, but it's still a beta, so there will be many more improvements coming over the next few weeks. As for the app itself, Cortana's home home screen is your feed, similar to what you'll see on Google Now. On the left side there is a slide menu with a notepad and reminders, as well as a settings menu. We'll go more in-depth with voice assistant later today, but for now, feel free to download THE APK and try it out for yourself! Download APK here (Google Drive) Tagged: MicrosoftVirtual Assistant APK tear-jerking latest update of Google's app has revealed some possible design changes. These changes affect the Google app itself and pixel launcher in Google Feed.Because they were found in demolition, these changes are not guaranteed to show in a future update. With Google remaining tight-lipped about its future design direction, APK teardowns might provide the best insight into what the search giant might have in store. 9to5Google completed one such demolition with google's 7.26 version and has gleaned some notable changes. The first change is the search bar, which floats and is saved when moving through the tape. The corners are more rounded than before, with the borders appearing lighter and lacking shady effects. The rounded search bar is also in search results, although we don't know if the bar also floats and is saved when scrolling. The Tape itself is also a facelift, with cards appearing already and having more space in between. As a result, shadows are more visible than in the current Google app. However, this may change shortly before the final release. Even the way you navigate looks different than it used to be. While the current Google app only has icons in the lower carousel, the future version of the app may include accompanying text, making it clearer which icons belong to those sections. Finally, the More tab contains new options to customize the widget and personal search. Currently, you can only access the Personal Search option through the app label. Moving on to Pixel Launcher, his Google Feed sees a more radical visual overhaul. The thicker the border and the extra space between the maps from the Google transfer app is more, although we also see a more matte background. Currently, The Google Feed Pixel Launcher is translucent. Images also get design changes, with image caption covering the entire width of the map. Currently, the images only go as widely as the accompanying text in the map. The final changes seen in the demolition include promotions currently on the service list and a new booking menu in the assistant's settings, as well as the lack of bubbles when chatting with Assistant.Keep in mind that all of these changes have been found in APK tear, so they are not guaranteed to show in the final release. Seeing that Google is at least working, perhaps some sort of ad on Google I/O 2018 would inform us of its future design philosophy. Cable is becoming less and less popular in households, while many of the latest TVs ship with smart features to view online content, you don't have to buy an expensive new TV just to get a better streaming experience. Many manufacturers have used Google's open source Android operating system to create a set-top box of all shapes and sizes. As a result, it has never been easier to access services like Netflix or Hulu or watch your own video content on the big screen. Products like Amazon Fire TV Stick 4K on Amazon simplify the process by easily connecting to your Amazon Prime account and other streaming services as well. While others, such as Nvidia Shield TV on Amazon, support gaming features. The best Android TV boxes will allow your TVs to be more versatile than ever before! way of streaming 4K HDR content on your fancy new tv, but don't need all the other bells and whistles of android TV Box? Amazon's Latest Fire TV Stick The bill is excellent. Connecting to the back of the TV, this budget device offers a lot on price. More than half a million TV episodes and movies are available on Netflix, Hulu, Prime Video and other sources, supported by 4K HDR 10 and Dolby Atmos Sound. Content sites such as Facebook, Reddit and YouTube are also available on Fire TV through their apps, and with a bit of work, you can browse other websites as well. Unsurprisingly, for amazon, Alexa's support is built in and allows you to search for content using your voice, as well as access to a large Alexa skills library. The small remote control has volume, navigation and other basic buttons, and can control connected accessories such as the sound panel. When it comes to premium Android TV boxes, there is one that stands out above the rest. Nvidia Shield TV is a high-quality device, with quality components that offer an unrivalled set of features. As well as streaming high-definition 4K HDR content from the likes of Netflix and Amazon Prime Video, the box supports Dolby Atmos and DTS-X surround audio passing to make your movies sound as good as they look. The fun doesn't stop just with watching your favorite movies and shows, however. The Shield TV also has a high-end computer graphics card that allows you to play many video games without having to connect your console or computer. A good Bluetooth controller comes in a box. Names such as Fortnite, Assassin's Creed and Grand Theft Auto are available via the Nvidia GeForce Now streaming platform, as well as various games for Android, Wii and Gamecube (the last two using an emulator). Nvidia Shield also has the full support of Cody and Plex, so you can play your own library of audio and video content just as easily as streaming it. To that end, you can also connect a USB stick or hard drive to the box to add extra storage. Many small manufacturers produce inexpensive Android TV boxes, and there often are not many differences between them. But this Easytone model has several features that lift it above the rest. Launching the latest version of Android (8.1), the box uses a quad-core RK3288 processor combined with 4GB of RAM to provide fast performance even when streaming 4K video. 32GB of built-in storage provides ample space for whichever set of Android apps you prefer. There is support for both Ethernet and 2.4Ghz Wi-Fi to connect to the home network and the internet, but no 5Ghz wireless support. In addition to the standard 1/8 Audio jack that connects the box with the TV, speakers or headphones, the Easytone device also has the ability to listen privately with Bluetooth headphones, or stream audio bluetooth speaker without worrying about dirty cables. There's also a remote control kit to control most of the features. With the best specifications and Than most Android TV boxes in this price range, Easytone is a solid value option. If you just want to add basic streaming features to an old TV and really don't want to spend a lot of money doing it, check out the Amazon Fire TV Stick. For just \$40, this is the easiest and cheapest way to get Netflix, Prime Video, and most other streaming content. Setting up is about as easy as it gets: just plug a stick into the HDMI port on the back of the TV, press the power button on the remote control, connect to the internet, and you're good to go. You can browse the web through Silk and Firefox browsers. Using a remote and on-screen keyboard to navigate and type text can be a bit cumbersome, but Alexa voice support is enabled. You can say something like running Netflix or Game of Thrones, and it will do just that. Don't want to miss your favorite shows just because you're away from home? Sure, you can just download the app for your phone or tablet, but if you know you'll have access to television, this little Pendoo X3 Mini is an inexpensive alternative. Measuring just 3.2 x 3.2 x 0.7 inches and weighing just 3.5 ounces, it's a small enough toss in your luggage or even a small night bag. Despite its small size, it's powerful enough to transmit HD video. Audio and video content can be sent either through the HDMI port or via Miracast and Airplay wireless technologies built into many state-of-the-art TVs or speakers. Other specs are standard for low-cost Android TV boxes like this, with a quad-core processor, 2GB of RAM, and 16GB of built-in memory. It has support for both Ethernet and 2.4Ghz Wi-Fi, and having a card reader and USB-A slots built into the device means you can expand the available storage with an SD card, memory flash drive or hard drive. The MXPro ticks all the usual boxes when it comes to entry-level Android TV Box-quad-core processor, 1GB of RAM, 8GB of memory, but it's the flexibility and speed that make it more interesting than similarly priced competitors. In addition to the unit, you get a remote control in the box to control all the standard features, and MX' media streams seamlessly with little delay or buffering. If you don't plan on transmitting everything you look online, you'll probably want to upgrade your built-in storage. Fortunately, this is easy to do with an SD reader card or one of the three USB-A ports. The connection is processed by either Ethernet or 2.4Ghz Wi-Fi, and the device comes preinstalled with several useful apps, including Cody, YouTube, Netflix, and others. You a little more for the Minix Neo U9-H, but it's not hard to see why. This high-quality Android TV box is positioning itself as the ultimate home theater experience. Unlike the creators of many cheaper boxes, the company regularly updates the firmware for its home theater devices. Combined with a solid build, the assembly and reliability, this means that you will probably be able to continue using U9-H for several years, which certainly justifies the higher initial cost. The box has support for both Ethernet and two-band Wi-Fi networks. On the audio-visual side, there is an HDMI 2.0 port, plus a SPDIF and a pair of 1/8 connectors. The three USB-A ports and the SD card reader allow you to expand the storage with a relatively paltry 16GB, and there is support for both 4k and HDR10 content. One of the best features of the MINIX NEO U9-H is the complete air mouse, a gyroscopic wireless remote control that lets you control the pointer on the screen just by moving it. The WERTY keyboard on the back of the remote allows you to easily type text when searching for content.
