Keep scrolling for a full honest review of Rosetta Japanese stone. ROSETTA Stone Discount Japanese Best Deal of the Year: All Languages now only \$189 with Rosetta Stone Lifetime Subscription! Go to my review deal from Rosetta Stone Japanese in a world where there's enough time and we're always going, Rosetta Stone has built a platform that makes it really easy to learn really anywhere so with this review I want to focus on the mobile app but I will also be touching on the desktop version as well. Over the course of a few months, I've been trying to learn Japanese that I quickly learned was very hard unlike how things were with The Rosetta Stone Mandarin Chinese. This time, I had no basic knowledge and starting from scratch and this is perhaps the best way to really judge how good Rosetta is Japanese stone. How hard is it to learn Japanese? There are many takes on this but like any language, most of it will depend on your ability to learn new languages, your original language, how much effort you put in, and the tools you use. Instinctively, Japanese looks just as hard as a language like Chinese and indeed on the same list of nine hardest languages for Englishmen, but it's a little deeper anxious, and there are plenty of reasons that at the same time make it easy and hard. Why Japanese is hard to use: it uses four alphabets, including Chinese-influenced Kanji (illustrated), two Adastik writing systems, and the Roman alphabet (Romanji). It's a proud language that means there are levels of politeness used when forms and grammar rules can be a little odd than what you used to be because it's so mixed and sometimes backwards why Japanese can be easier than you think : You probably already know a bunch of Japanese words like sushi, menga, kimono, emoji, etc. There are no tones in Japanese (unlike in Chinese) – hallelujah! How is the course structured? The whole course is broken down into 12 units that touch on the very practical things you need to know about the language: the language basics of hi-school work and school shopping travel past and future friends and social life dining and holiday home and health life and the world of everyday places and Within each of these units are lessons the size of an individual bite that focuses on very specific mechanics such as pronunciation, reading, writing, grammar, and vocabulary. Each of these lessons is very interactive, intuitive, and repetitive (in a good way). The format normally looks like this although the order changes. Each unit normally has 4 core lessons and then it breaks from there. The core lesson of pronunciation vocabulary grammar reading listen writing review lessons gradual progress foundation built on earlier and knowledge is often re-tested to help maintain knowledge. Rosetta Stone learning philosophy From the first unit and the first lesson of Rosetta Stone Japanese, it becomes apparent that the Rosetta Stone learning philosophy is one that focuses on a few core principles that make it so effective and fun to learn. Practical – This may seem counter-intuitive or slightly jarring at first but you literally start learning Japanese by learning how to say boy and girl, and then graduate to learn male and female. Learning is based on everyday practical things rather than delophones to grammar and vocabulary vomiting. Another focus of Thessta Stone is that it is more about talking and listening and not so much reading and writing. Progressive and compound learning - from the first thing you learn, everything is constantly thrown into the mix so you always include old knowledge with new knowledge. In language, repetition is key and so I find this particularly useful. You may not be getting asked at the first time something, but once they hit you with something for 20 times, something is bound to stick. Interactive – In contrast to reading a book or having to sit down to watch a video. The Dayta Stone idea is to make learning as interactive and attractive as possible. They almost gamified it in some respects because every lesson has a challenge and you are constantly elated that you get it right or kicking yourself to get something wrong. You get engaged because you always look at characters, images, listening to sounds and choosing from multiple choices. There is instant feedback so you just keep on it until you get it right. Just short enough to escape boredom – we all get very short attention spans with all our noise from all directions. The good thing about Rosetta Stone is that things bite to size and are easy to pick up to start and also easy to pause if you hang up. You will also see that every lesson is very short to go through so that you are always working towards the next to fill that progress bar. Most are only 10 minutes or less. Examples of lessons I won't be able to show you all the different types of questions you will be seeing in Rosetta Japanese stone but here's the choice To give you an idea of what to expect. Type 1: Matching phrases to images here, you have a read phrase for you and you should match it one of the images down below. This is probably the most common type of question. Type 2: Pronunciation in pronunciation lessons, you use your phone or desktop microphone to pronounce Hiragana/Katakana (Adastic). Type 3: Completing phrases in grammar-related lessons, you will be challenged to choose the appropriate avonotic type 4: talking full phrases these phrases are perfect and you need to talk to your microphone or phone carefully for each one. Type 5: Writing here, you are challenged to type A-sound sounds for each character based on previous lessons. Experience on the desktop for Rosetta Stone, this has always been the traditional way to access period materials and that's why it's so polished and the most complete when it comes to features. This is how I have access to lessons when I wanted to sit down and learn since I spent a lot of time on my computer and I favor having dual monitors at home. The beauty of the desktop version is that you have a lot of real estate to work with. None of the photos or text ever seem too archaic and it's quite easy to move around. Pros: Writing lessons are only available on the real estate desktop on the screen to display all the features compared to the mobile app, it's easier to navigate options and you don't have to worry about changing the eligible screen orientation for tutor lessons – when you're far enough away in the course, you can use live teacher lessons with Rosetta Stone Teachers Negative App: Using Flash is the friendlier for Mac users a little slower to sometimes always ask for access to the microphone even if you don't get it a license earlier can't use this go on the mobile app Rosetta Stone Japanese mobile app is very well done and in many ways feel more modern and polished than the desktop version that is still using clunky flash to render Everything. The program leverages your microphone and tap function so that it feels very fluid and natural to use. What you need to know is that the lesson is all done in horizontal format so you have your phone over. The app is very strong and well built and in most cases provides any feature that is desktop with a few small exceptions. That said, the mobile app has a number of additional features that the desktop doesn't have that makes it very useful and handy. Pros: By its nature, the mobile app allows you to learn to go offline with your smartphone functionality – unique to the app, this allows you to download the entire unit so you can use it when you're on a plane or in an area without WiFi or learning expansion data – there are additional features like Seek & Speak, Story, and Audio That's built into the phone for additional ways to learn Japanese negatives: writing lessons from the removal app is probably because the interaction required for the type of answer can't be replicated on mobile. They let you not know that this exists in the mobile app so you'd just notice if you're switching from desktop to mobile. You can't use mobile and desktop at the same time. You can only log in at one place at a time. Modes for different types of students are one of the features that are available both on the desktop and on the mobile app, the ability to switch between the type of characters to learn from it. There are four types for the Japanese: Kanji/Fiorigana – Kanji are Chinese characters used in Japanese. Furigana is reading help along with Kanji Kanji - Chinese characters used alongside Hiragana/Katagana in hiragana/Katagana language - Adastik Romaji letters system - using Latin scripts to write Japanese you can easily do this on desktop as you can toggle it anywhere. In the mobile app, you can go to the Settings menu and change the script system. It's quite a bit more cumbersome to achieve but at the same time it's a setting that you're likely to juggling on will be during your learning. One thing I was a little disappointed with is that there is no primer or guide to help you decide which one to choose from. By default, it is Set to Hiragana/Katagana which is the best place to start and go to the most useful as a beginner. That said, it never really tells you when it's time to switch to other modes. Unique features let's talk about some of the other dibbators that I found made to Rosetta Stone. This is an example of the live tutor session I did from my Mandarin course. Live Tutoring - Rosetta Stone has made it incredibly easy to actually have live sessions with a real instructor. During the 20-30 minute session, you were in a classroom with up to 60-70 other students although in my case it was just two of us and we went through the same course material, practicing primarily pronunciation, vocabulary, and asking each other questions. It was actually helpful and changed everything from doing this course by yourself and seeing how others are progressing. One thing is that there's not much time to ask any questions. Your trainer will go through the slides that all the shots are based on and when you're done, the lesson ends. There is quite easy time to plan for tutoring through Rosetta Stone as many availability. Learning Expansion – There is a feature on the desktop and in the mobile app called Learning Expansion and it's additional games and activities that can enhance your learning of the new language. The top image of the app is but the desktop version has a few other games where you Pair with another Japanese learner on the platform in a competitive manner. Audio Companion – This is part of the developed learning section but worth separating. Mobile audio is useful if you are looking for an alternative way to learn. Download these audio lessons on your phone and listen to them whether they have a data connection or not. Chat tool – This may not be too useful for some but it's a great way to connect with others learning Japanese from around the world that is also using Rosetta Stone. How much does the course cost? How Uptha Stone works is to work under the monthly subscription service model. You pay to access the app for a period of time. They sell their courses in an increase of 3 months, 6 months, 12 months or 24 months. Your choice largely depends on how long you think you need to complete the course as well as how long you'd keep it to continue practicing. The best value comes from the 24-month period where it only comes out to \$5.99 USD per month for a total of \$143.76 USD. Go through all the pricing options available. All your plans come with a 30-day money back guarantee so if you're finding out that it doesn't work for you, you can cancel your plan. This is probably the best way to really test whether you like Rosetta Japanese stone. Rosetta Stone Discount Best Deal of the Year: All languages now only have \$189 with rosetta stone lifetime subscription! Ends November 30. Also, if you are a student, Get The Dayta Stone for free for 3 months. Going into the deal is it easy to learn? I'll be the first to tell you that so far, learning Japanese especially when coming quite fresh has been really challenging. With Rosetta Japanese stone you jump right in and you find your head spinning a little try to remember everything along the way but that's why you have to keep practicing, re-doing lessons, and listening carefully. Where it can be improved - one thing that is a bit annoying for me is that there isn't much explanation because everything is exercise/question based. As I've been going along, I've been leveraging the sound forums and picking up a few keywords here and there to be able to answer things but I realized that when it came time to pronounce, I was completely lost. Maybe that's what everyone starts from early figures but I find myself stuck in some places. What I appreciate about this program though is that I learn things that apply a little more to life every day. For example, learn about food that I might potentially want to order, or objects that I see on the streets. It's been slow for me but everything starts to click. Immersion method - with the above said, one thing you need to know about Rosetta is the Japanese stone that is learning based The experiences and ideas are that you naturally progress from words and phrases to sentences and then conversations so some of my primary challenges have definitely been sorting yourself out similar to how it did for Mandarin. One thing I recommend that you do is have a notebook with you so that you can make notes. Conclusion I personally think Rosetta Stone has created a great product with the Japanese period. The software is intuitive and easy to use which means that anyone can pick it up and start learning right away. Through extensive courses, it covers a wide range of topics that hit the encounters of daily life and the business topics that you started. Rosetta Stone's strength for those who are short on time and requires a really fascinating crash course in the tongue without getting into the greasy details of the intentions about every aspect of the language. It's geared more towards the Japanese conversational aspect and less in reading and writing so make sure you have that in mind. While Japanese is a challenging language to learn, Rosetta Stone provides a structure to learn that it is interesting, engaging and practical that for most people is something you are looking for especially if you hope to interact with locals on your next trip to Japan.
