With Box, you can safely store files in the cloud. You can also access information wherever you are at any time. This intuitive app syncs information from your desktop and phone. It is a handy tool when you are in meetings or away from your desk. With Box, you can share the necessary files with your colleagues or update documents from your mobile device. There's also the ability to view different types of files and enjoy full-screen quality. When you install Box, you get 10GB of cloud storage for free. You can add extra security to more sensitive files with file-level security controls. You can access your information and folders offline for added convenience. You can view documents and stored files using a real-time search tool. There is also an easy way to share large files with friends and colleagues. This is done through the link-sharing method. All you have to do is copy the automatically generated link and you're good to go. It's a versatile cloud storage program because you can save photos and videos too. The download speed is slow at times, but in most cases it depends on your network connection. Box is a secure, fast, and user-friendly system to manage important files wherever you are. If you have a phone, you have access to all your important information and folders at the touch of a button. Where can you run this program? This app requires Android version 5.0 and up. Is there a better alternative? No. Box is a reliable cloud storage system for Android phone users. DropBox works in a similar way, but with less space. Switching to cloud storage makes it easier to access files. Box is a safe and secure place to store your information. It's an effective tool and a top-notch folder management option while you're out of the office at any time. Should you download it? Yes. If you find yourself away from your desk and need critical information on the go, this is an effective system to use. Remind is a communication platform for teachers and students to talk to each other. Web software also has several useful features, such as sharing files and translating messages. This platform is designed for both offline and online teachers. As a teacher, you can send schedules, photos, files or even quizzes through messages to all students. Remind acts as a social network for educational purposes. Professors can easily contact their students as well as their parents without having to request personal numbers or emails. The website can also tell you if all your students have received your message or if someone is missing it. Educators start by creating a class that can function as a group in certain social networks. This is where teachers message everyone in the classroom. The platform also allows you to send private messages to a student or his parents. Parents, makes educational resources such as Powerpoint lessons accessible to everyone. Parents can also see your messages. All documents, spreadsheets, and other files are available under the Files tab for everyone in the class to access. Integrated Platforms and Other Features Educational Platform also supports other resources to help you with class abilities. This includes a Google class that provide students with course jobs and their grades. You can also use a monkey quiz and review for exercise or after-school activities. Another way to recall can help you is the translation feature. You can translate any posts on the site into some of the most commonly used languages, such as Spanish, French and Korean. This can help you understand what your students can say. It also allows you to communicate with people who can only speak a particular language. Where can you run this program? The Remind website is available through any browser. You can also use a mobile phone app that is compatible with android 4.4 or better phones, as well as iOS 10.0 and up. Is there a better alternative? A good alternative to Remind is Twiducate. A social media app that provides a private platform for both teachers and students. The app is compatible with Google Docs and YouTube. Remind fulfills its goal of providing you and your students with a social media platform for effective messaging and sharing. It also goes beyond its function with integrating other websites and platforms such as Google Docs. You can also contact international students or teachers with Remind. The only limitation of the site is the 140-character limit, which is similar to Twitter, before it doubled the character limit. Should you download it? Yes, a free account provides teachers with the tools they need to communicate and provide resources to the class. Download Watch videos from the Internet from YouTube for Android. This is the official app that allows you to watch videos from the Internet directly on the Android device. YouTube works just like its web version: subscribe to channels, search videos, see recommended videos, share videos and that it also has voice search and instant search suggestions. You can also throw videos on tv, comment on videos, and also loved and disliked them and letting the world know how you feel about said video. Enjoy watching YouTube videos for Android. Check out Tom's Guide for more information android and Android Games. Also check out the forums for Android. Microsoft's download announced its plans to bring Cortana a virtual assistant for Android a few months ago, and a beta app was slated to launch sometime this month. An early copy of the app is leaked to the internet today and you can download it through the Google Drive link below. Just keep in mind that since this file does not come directly from Microsoft or anyone associated with the company, you need to download and install at your own risk. If you're even familiar with Cortana on Windows 10 or Windows Phone, you'll be right at home here. Once you run the app for the first time and enter a few pieces of information, you can start using Cortana just like you would Google Now or Siri. Microsoft's voice assistant can help you plan events, update you on local news, weather, sports, and more. This version of the app seems to be fairly stable, but it's still a beta, so there will be many more improvements coming over the next few weeks. As for the app itself, Cortana's home home screen is your feed, similar to what you'll see on Google Now. On the left side there is a slide menu with a notepad and reminders, as well as a settings menu. We'll go more in-depth with voice assistant later today, but for now, feel free to download THE APK and try it out for yourself! Download APK here (Google Drive) Tagged: Microsoft Virtual Assistant Update, October 14, 2019 (10:09 am ET): After first showing up on the South Korean version of the Google Play Store (via Android Police), the Nvidia GeForce app is now available from APK Mirror for all to download (via XDA developers). While anyone can install the app on almost any Android device, you'll need a GeForce Now beta account to actually use the service. XDA, however, if you have that access to the service works very well. We don't know which devices be supported or when they see the release of GeForce Now, but it's a good sign that this APK works on most Android phones and tablets. Original article, August 19, 2019 (12:31 PM ET): The cloud battle has warmed up again, with Nvidia announcing that GeForce Now will begin rolling out support for some Android devices later this year. The cloud gaming service has been in beta for PC, Mac and Nvidia Shield TV for several years, but now you can take the entire library of PC games with you on the go. Yes, you're reading it right. Unlike Google Stadia, GeForce Now lets you connect to a remote PC and install games you've already purchased on Steam, Uplay, Battle.net and other digital platforms. This makes it an attractive alternative for those who have extensive libraries and insufficient equipment. To make the service even more attractive, Nvidia announced that GeForce RTX servers are rolling out today in Germany, and very soon in Northern California. Additional servers will open in Japan and Korea later this year. This will bring incredible performance and advanced ray tracking technology to the cloud gaming service. Combined with low 5G network delays, Nvidia claims that this makes VR and AR possible on almost any device. Related: Google Stadia vs. GeForce Now: Which cloud gaming service is better? It is unclear which Android devices will be included in the beta version of GeForce Now. Only the flagship devices from Samsung and LG are mentioned in the release, but even then it is more than the original deployment of Google Stadia, which will be available only on Pixel devices. Many games won't support touchscreen controls, so you'll need a Bluetooth controller to play games on your Android device. GeForce Now already supports some of the most popular options, such as The SteelSeries Stratus Duo and Razer Raiju Mobile, as well as the controller for Nvidia Shield TV. The beta version of GeForce Now will end in a few months, so be sure to sign up now if you want to try the service before it is released to the public. Tagged: NVIDIA Cloud Gaming Games
