Sasktel Setting Up Step Process Go to android Home screen and open the Email or Gmail app (this setting can vary depending on the model and version). If you already have other email accounts in this app, go to the menu from the top 3 lines and click settings and click Add accounts. Tab Others in the Settings email section. Enter your sasktel.net email address and then click the Manual Settings button. Choose a POP account. Enter the following information on the in-coming server settings screen. Username: Your Username Password: Your POP server account password: mail.sasktel.net Security Type: No (uncontrolled ssl) Port: 110 Click The next button Enter the following information about outgoing server screen settings. SMTP: smtp.sasktel.net: 25 Security Type: No (uncontrolled ssl) Click Next Button Select email check frequency (preferably every 15 minutes). Name your account and click Finish. Congratulations, you can now send and receive sasktel.net email on your Android device. Android iPhone Outlook Tags: sasktel email settings sasktel email lookup sasktel smtp server sasktel imap server Use settings below when setting up email sasktel.net on any desktop email program, wireless phone, or tablet. Tip: You can use Lookup (support.apple.com) mail settings for Apple devices to find your email server settings. Incoming Server Information Field Setting Server type POP3 or IMAP, depending on your preferences (to find out the difference, see POP3 or IMAP (video) or what is the difference between POP3 and IMAP?) Tip: If you want to see e-mail messages in both the webmail sasktel.net and in the desktop email or mobile device, select IMAP. Server address mail.sasktel.net Port 993 for IMAP 995 for POP3 or POP Authenticate using clear text (or, select Login to use clear text authentication) username Logon youremail@sasktel.net (enter your full email address, not just the first Secure outlet layer or, make sure one of them is verified: Requires a secure connection (SSL) or requires a logo using secure password authentication (SPA) or This server requires a secure connection (SSL) Outgoing server information Field Setting Server address smtp.sasktel.net Port 587 Authentication Make sure that one of them is verified: Authentication required: Authentication required or My server requires authentication and in the appropriate settings, select Use the same settings as my incoming mail server Secure layer socket On or, make sure that one of them is checked: This server requires a secure connection (SSL) or requires secure password authentication (SPA) NOTE: If you see different settings on other websites (e.g. server ports 110 and 25), they may work but are not safe, but they are not safe, but they are not safe, but they are not safe. For more information and troubleshooting Wireless phones and tablets Email program (on desktop or laptop) Android is a trademark of Google, Apple, Apple TV, App Store, Apple Watch, AirPlay, Beats, FaceTime, HomePod, iCloud, iMessage, iPhone, iPad, iPod touch, iTunes, Mac Mail, Mac OS X and Safari are trademarks of Apple Inc. iOS is a trademark or registered trademark of Cisco in the U.S. and other countries. If you're already on the set up email sasktel.net on an Android device, see Better Email Security on your wireless phone or tablet and follow steps to change settings rather than take steps below. There are four steps in this process. Step 1 Step 2 Step 3 Step 4 Step 1 To set up your email account sasktel.net on any Android device: If you're setting up your email for the first time, tap the mail icon to get started. Tip: In some phones you may have to click apps to add an account. (If you already have an email account on this device, click The Mail's Menu and Add an account to the other (POP3/IMAP) or SaskTel.net if you see this option.) Enter your email sasktel.net and password and then click the setup guide. NOTE: If you click Next instead of manual settings (and complete the process without going back), your email account sasktel.net will be automatically configured with a security type: No and Server port: 143 that are not secure. For better security on your email account, follow these steps. Go to Step 2. Android is a trademark of Google, Inc. Step 1 Step 2 Step 3 Step 4 Step 2 Make sure the incoming settings look like this: TIP: You may only need to change the type of security from No to SSL, and then everything else should be correct. IMAP or POP Screen or POP Protocol we recommend IMAP for people who check their email in multiple places, such as phone, tablet and computer. (For more information see what is the difference between POP3 and IMAP?) Tip: With IMAP, you can see and use your personal folders created in sasktel.net mail. Email address sasktel.net email address Your email address is your email address sasktel.net Password Your sasktel.net password server (IMAP or POP) mail.sasktel.net Security Type SSL Server Port 993 for IMAP 995 for POP3 Click Next. Go to Step 3. Android is a trademark of Google, Inc. Step 1 Step 2 Step 3 Step 4 Step 3 Make sure the outgoing server settings look like The screen element/box sign setting required (or require entry) Yes (verified) the username of your email address sasktel.net Password Your sasktel.net password SMTP server smtp.sasktel.net Security Type TLS Server Port 587 Click Next. Go to Step 4. Android is a trademark of Google, Inc. Emailsfx Sasktel Email Sasktel.Net Email Settings Sasktel.Net is a well-known e-mail service provider that has been on the market since 1908.
