Mist Alba (Banana Taste) - 100 mlBrunelLab2018-11-26T13:52:27:00 Overall name: magnesium sulfate (epsom salt) (epsoma salt) (nee mag ma. um SUL Fate) Brand Name: Epsom Salt Medically reviewed Drugs.com March 17, 2020 - Written by Cerner Multum What is magnesium sulfate? Magnesium is a natural mineral that is important for many systems in the body, especially muscles and nerves. Magnesium sulfate also increases the amount of water in the intestine. Magnesium sulfate is used as a laxative to relieve accidental constipation. Not all external uses of magnesium sulfate have been approved by the FDA. Epsom salt should not be used instead of medications prescribed for you by your doctor. Magnesium sulfate can also be used for purposes not listed in this medication guide. Never use a higher dose of magnesium sulfate than recommended on the packaging label, or as your doctor has sent. Using too much magnesium sulfate can cause serious, life-threatening side effects. Do not use magnesium sulfate as a laxative without medical advice if you have: severe abdominal pain, nausea, vomiting, perforated bowel, bowel obstruction, severe constipation, colitis, toxic megacolon, or a sudden change in bowel habits that lasted 2 weeks or longer. If you have rectal bleeding or if you do not have bowel movements after using magnesium sulfate as a laxative, stop using the medication and call your doctor immediately. These may be signs of a more serious condition. Do not use magnesium sulfate as a laxative without medical advice if you have: severe abdominal pain; nausea or vomiting; perforated intestine; bowel obstruction or severe constipation; colitis or toxic megacolon; or a sudden change in bowel habits lasting 2 weeks or longer. Ask your doctor or pharmacist if it is safe for you to take magnesium sulfate if you have: diabetes; Kidney disease; Eating disorder (anorexia or bulimia); If you have already used laxatives for more than 1 week; or if you're on a low-magnesium diet. It is not known whether magnesium sulfate will harm an unborn child. Tell your doctor if you are pregnant or planning to get pregnant if you use this medication. It is not known whether magnesium sulfate enters breast milk or whether it can harm the nursing. Tell your doctor if you are breastfeeding. Use exactly as indicated on the label, or in what is prescribed by the doctor. Never use a higher dose of magnesium sulfate than recommended on the packaging label, or as your doctor has sent. Using too much magnesium sulfate can cause serious, life-threatening side effects. Magnesium sulfate can be used orally (through the mouth) or in Soaking. Follow your doctor's instructions or instructions on the package. To take magnesium sulfate orally, dissolve one dose in 8 ounces of water. Stir this mixture and drink it all at once. You can add a small amount of lemon juice to improve the taste of this mixture. Oral magnesium sulfate should move the intestines for 30 minutes to 6 hours. Drink plenty of fluids while taking magnesium sulfate. If you have rectal bleeding or if you do not have bowel movements after using magnesium sulfate as a laxative, stop using the medication and call your doctor immediately. These may be signs of a more serious condition. To use magnesium sulfate as epsom salt, dissolve in plenty of water in a large bowl, bucket, foot bath, or bath. Follow the instructions on the product label on how much epsom salt to use per gallon of water. Store at room temperature away from moisture and heat. Since magnesium sulfate is used as needed, you are unlikely to miss a dose. Seek emergency medical attention or call 1-800-222-1222. An overdose of magnesium sulfate can be fatal Overdose Symptoms may include nausea, vomiting, flushing (heat, redness, or restive feeling), feeling very hot, slow pulse, extreme drowsiness, or fainting. Magnesium sulfate taken orally can make it more difficult for your body to absorb other medications that you take through your mouth, especially antibiotics. Avoid taking other medications for 2 hours before or after taking magnesium sulfate as a laxative. Get emergency medical care if you have any of these signs of an allergic reaction: hives; shortness of breath; swelling of the face, lips, tongue or throat. Common side effects may include diarrhea or indigestion. This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You can report FDA side effects at 1-800-FDA-1088. Other drugs may interact with magnesium sulfate, including prescription and over-the-counter medications, vitamins and plant foods. Tell each of your health care providers about all the medications you are using now and any medications you start or stop using. Remember to keep this and all other medications within reach of children, never share your medications with others, and use this medication only for the indication prescribed. Always consult your health care provider to make sure that the information on this page is relevant to your personal circumstances. Copyright 1996-2018 Cerner Multum, Inc. Page 3 Moko Mist Alba Solution works by reducing nerve impulses to the heart muscles and in the intestine, retaining water inside the colon to evacuate the intestines. Details related to the use of Moko Mist Alba Solution, composition, dosage, side effects and reviews are listed below. Drugs and Drugs Uses Side Effects Intervention Interaction Effects Overdose Images Uses Side Effects Interaction Interaction Effects Overdose Images Uses This drug is used for a short time to treat accidental constipation. It is a laxative (osmotic type) that is thought to work by bringing water into the intestines, an effect that helps trigger bowel movement. This medication is also used to treat symptoms caused by too much stomach acid, such as heartburn, indigestion, or indigestion. It is an antacid that works by reducing the amount of acid in the stomach. Take this product through your mouth as directed. For the chewing form, chew thoroughly before swallowing. For the liquid shape, shake the bottle well before each dose. Carefully measure the dose with a special measuring device/spoon. Do not use a family spoon because you can't get the right dose. If you are taking this constipation medication, drink a full glass of water (8 ounces or 240 milliliters) with each dose. Follow all the instructions on the product packaging, or use at the doctor's direction. If you have any questions, ask your doctor or pharmacist. The dosage is based on your health condition and reaction to treatment. Extended use or overuse of this medication for constipation may lead to dependence on laxatives and ongoing constipation. Excessive use can also cause permanent diarrhea, loss of large amounts of water in the body (dehydration) and mineral imbalances (e.g. high magnesium). Tell your doctor if your condition persists or worsens. For constipation problems, it can take 30 minutes to 6 hours to produce bowel movement. Tell your doctor if this product does not defecate, if you need to use this medication or other laxatives regularly for more than 1 week, or if rectal bleeding. For problems with stomach acid, do not take the maximum dose of this medication for more than 2 weeks, unless directed by a doctor. If you think you may have serious medical problems, seek medical attention immediately. Side effects of diarrhea can occur. If this effect persists or worsens, tell your doctor or pharmacist immediately. If your doctor has instructed you to use this medication, remember that he or she has judged that the benefit to you is greater than the risk of side effects. Many people using this medication do not have serious side effects. Tell your doctor right away if any of these unlikely but serious side effects occur: symptoms of high magnesium levels (e.g. muscle weakness, slow/irregular heartbeat, slow/small breathing, mental/mood changes such as confusion), symptoms of dehydration (e.g., reduced urination, dizziness, extreme thirst, very dry mouth), abdominal pain/belly, bloody stools, bloody stools. A very serious allergic reaction to this drug is rare. However, seek immediate medical attention if you notice any symptoms of a serious allergic reaction, including: rash, itching/swelling (especially the face/tongue/throat), severe dizziness, breathing problems. This is not a complete list of possible side effects. If you notice other effects not listed above, see your doctor or pharmacist. In the U.S. - Call your doctor for medical advice about side effects. You can report FDA side effects at 1-800-FDA-1088 or www.fda.gov/medwatch. In Canada - Call your doctor for medical advice on side effects. You can report side effects to Health Canada at 1-866-234-2345. Precautions Before taking magnesium hydroxide, tell your doctor or pharmacist if you are allergic to it; or if you have any other allergies. This product may contain inactive ingredients that may cause allergic reactions or other problems. Talk to your pharmacist for more information. Before using this medication, tell your doctor or pharmacist your medical history, especially: kidney disease, appendicitis or symptoms of appendicitis (e.g. abdominal/abdominal pain, nausea/vomiting), magnesium-limited diet, sudden change in bowel habits that lasts more than 2 weeks. During pregnancy, this medication should only be used when it is clearly necessary. Discuss the risks and benefits with your doctor. It is not known whether this drug gets into breast milk. Consult your doctor before breastfeeding. Drug Interactions Can Change How Your Drugs Work or Increase Your Risk Of Serious Effects. This document does not contain all possible interactions with drugs. Keep a list of all the products that you use (including prescription/over-the-counter drugs and herbal products) and share them with your doctor and pharmacist. Do not start, stop or change the dosage of any drugs without the approval of a doctor. Some products that may interact with The drug includes: raltegravir, sodium polystyrene sulfonate. Magnesium hydroxide can reduce the absorption of other drugs, such as dasatinib, delavirdine, atazanavir, gabapentin, digoxin, mycophenolate, phosphate supplements (e.g. potassium phosphate), tetracycline antibiotics (e.g. doxycycline, minocycline), some antifungals of azola (ketoxone, itraconol) and antibiotics quincocoon thus, separate the doses of these drugs. Ask your doctor or pharmacist about how long you should wait between doses and for help in finding a dosing schedule that will work with all your medications. Overdose If someone overdoses and has serious symptoms such as fainting or breathing problems, call 911. Otherwise, call the poison control center right away. U.S. residents can call the local poison control center at 1-800-222-1222. Canadians can call the provincial poison center. Symptoms of overdose may include: severe/constant diarrhea, muscle weakness, mental/mood changes (e.g. confusion), slow/irregular heartbeat, reduced urination, dizziness. Notes/Keep are all regular medical and laboratory appointments. Lifestyle changes such as regular exercise and diet changes (including drinking enough water, eating proper nutrition with fiber-rich foods such as bran, fresh fruit/vegetables) can prevent or ease constipation. Lifestyle changes such as stress reduction programs, smoking cessation, alcohol restriction, and diet changes (e.g. avoiding caffeine/some spices) can help reduce heartburn and other stomach acid problems. Talk to your doctor or pharmacist about lifestyle changes that may benefit you. Missed dose Not applicable. Storage/Store at room temperature away from light and moisture. If you have any questions about storage, ask your pharmacist. Don't store it in the bathroom. Keep all medications away from children and pets. Do not flush your medicine down the toilet or pour them down the drain unless they are instructed to do so. It is right to discard this product when it has expired or is no longer required. Consult your pharmacist or local waste disposal company for more information on how to safely opt out of your product. Information last revised May 2020. Copyright (c) 2020 First Data Bank, Inc.
