Take advantage of the most adapted, highly customizable, lightning-fast, securely secured, and private email experience was last updated on 10/09/20 There have been 3 updates in the last 6 months the current version has flagged on Total Virus show Thunderbird reviews is a mail client for the desktop, an alternative to Microsoft Outlook, from Firefox developers. Thunderbird is an award-winning Mozilla and a free solution to manage your mail more efficiently. There are many benefits to turn to as well. Unlike mail, for example, it can process virtual identities and create addresses on the fly, and is widely considered to contain one of the best spam filters. Recently it has been updated with a simplified tabula interface to make email management easier. The fact that, like Firefox, Mozilla Thunderbird can be reinforced by all sorts of plugins, making it a very competitive email customer. Now it is faster and faster than before, due to the Gecko 5 engine. Getting going mozilla Thunderbird training is painless. You can quickly import email and contacts from outlook or email account and set up POP3, IMAP, or SMTP accounts in an instant. To stay well organized, Mozilla Thunderbird offers filters to deliver mail in separate folders and mailboxes. Of course, there is an inline spelling check to make sure your posts are professionally prepared. What makes Mozilla Thunderbird a little more unusual is the fact that it comes with a built-in RSS reader. Nowadays, it's a bit old because many people use a separate app - or even Firefox itself - to follow RSS feeds, but it can be useful if you just want to send and follow email at the same time while creating messages. Searching in your mail thunderbird search tool is excellent and is searched in real time when typing. Search results appear in a separate tab. Tabs are usually considered a big part of Thunderbird, like Firefox, and you can open multiple messages in tabs Individual. This is a great feature of Thunderbird, although it attracts you to open a lot of messages at once. Archiving is also another useful feature for those who don't want to delete messages but want to clear a place in the mailbox. What about security? You may think that an open source client would initially be less secure than a paid device, but Thunderbird is surprisingly safe with a bulletproof spam filter. The reason for this is that Thunderbird is regularly updated and formulated by volunteers who are primarily interested in producing a better product rather than benefiting from the finished product. Regular but small security updates don't slow Thunderbird. Exchange support and one of Mozilla Thunderbird's biggest selling points is that it offers support for Microsoft Exchange, which means that it will appeal to Office users who have already made a discount. On the other hand, the application lacks some accuracy in some areas. Thunderbird still doesn't have conversation-style email views like gmail (although you can download the add-on to do it separately), and there aren't many options for managing attachments and images. There is no calendar either, but then again, it can be downloaded separately in the form of Lightning. Overall, Thunderbird is a great free alternative to Microsoft Outlook. Want to check out more apps and programs? Find out about the best business email customers on the Solutions page. Security fixes have now fixed a problem that caused accidental damage in local folders after filtering (815012) a problem that has now been fixed, which caused the removal of projects stored in IMAP folders while setting up Offline (805666) Yes. Over there Absolutely free to download and install this program on the current operating system. The master setup will guide you through this process and it usually takes no more than a few minutes. Because Thunderbird is an open source program, it is usually updated on a somewhat regular basis. However, please note that these updates will not occur as often as those associated with the Mozilla Firefox browser. Programmers regularly check this software for malicious threats such as malware, spyware, and similar types of viruses. Thunderbird is just as secure as comparable email servers on the market today. Thunderbird is currently available for installation on all Android-based mobile devices. However, we should note that it is not designed to work with Apple operating systems. This is due to the restrictions that Apple imposes on the types of browsers and JavaScript codes that are allowed to use. First, you need to go to the official Mozilla download page. After scrolling down to the appropriate section, select Set Thunderbird. A separate window will appear, and this should guide you through the rest of the installation process. Note that Thunderbird is not an internet browser. So it wasn't designed with pop-up locks in mind. However, the chances of encountering pop-up ads on a mail server are extremely rare. If they occur, it makes sense to check the operating system for potential viruses. The current maximum memory capacity associated with Thunderbird is a total of 4 gigabytes. The user can create as many separate folders as he or she requires. Once this limit is reached, specific files must be removed in order to download additional information. In addition to being incompatible with iOS devices, Thunderbird can work in conjunction with all major operating systems. Please note that this includes Windows 10. If you're having compatibility issues, it makes sense to go to the official site and go to the latest version. Thunderbird is associated with 256-bit AES encryption. This essentially means that all messages will remain extremely secure. For added security, this email server allows two users to use the PGP key. This key offers an extra layer of privacy when needed. First you need to switch to Tools before clicking on Options and then Security. In this tab, highlight the Saved Passwords option. Once this is activated, select the Show Passwords box. This section will show usernames, account details, and related passwords. You can delete the password from this section. Mozilla Thunderbird, Portable Edition can work from a cloud folder, external drive, or local folder without being installed in Windows. It's even better with a platform PortableApps.com for easy lightweight and automatic updates. Also available: Mozilla Thunderbird, Portable Edition Beta, Mozilla Thunderbird, Portable Edition Legacy 68 Mozilla Thunderbird is a safe, fast mail customer that is easy to use. It has many great features including quick message search, customizable views, IMAP/POP support, RSS support and more. Also, the portable version leaves no personal information on the machine you run it, so you can take your email and book address with you wherever you go. Avoid support fraud. We will never ask you to call or write a phone number or share personal information. Please report suspicious activity with the Report of Abuse option. More This thread has been archived. Please ask a new question if you need help. Hi, could you let me know where I can find a download link: Thunderbird App for Android 4.4 (Alcatel OneTouch Phone). Thank you and regards, Paula Anderson Hello, Could you let me know where I can find a download link: Thunderbird App for Android 4.4 (Alcatel OneTouch Phone). Thank you and regards, Paula Anderson There is no mobile version of Thunderbird for any mobile OS including iOS and Android. Because of the more limited resources of the Thunderbird community compared to Mozilla, there is little chance of an Android version in the near future. Thunderbird is only available for Windows, Mac OSX 10.9 and Linux. Read this answer in the context of ☺ 7 There is no mobile version of Thunderbird for any mobile OS including iOS and Android. Because of the more limited resources of the Thunderbird community compared to Mozilla, there is little chance of an Android version in the near future. Thunderbird is only available for Windows, Mac OSX 10.9 and Linux. There is no mobile version of Thunderbird for any mobile OS including iOS and Android. Because of the more limited resources of the Thunderbird community compared to Mozilla, there is little chance of an Android version in the near future. Thunderbird is only available for Windows, Mac OSX 10.9 and Linux.
