Quantum physics, or quantum mechanics, physics on a microscopic scale. The quantum theory seeks to describe matter and energy at atomic and subatomic levels, where classical physics is not always applied due to the duality of wave particles and the principle of uncertainty. Online courses in quantum physics and mechanics and the ProgramGet introduction to quantum physics with online courses from major universities and institutions around the world. Edx offers both individual courses and advanced programs designed to help you learn about quantum physics in an attractive and effective online learning environment complete with video tutorials, quizzes and more. In addition, edX offers the opportunity to conduct proven certificates on courses of quantum physics. The certificate lists edX and the name of the university or institution offering the course and can be uploaded to your LinkedIn profile. This is proof to employers and others that you have successfully completed the course. Start working in quantum physics with one of the following courses or programs. If you're new to the world of quantum mechanics, get an introduction from Georgetown's self-driving course, quantum mechanics for all. This 4-week course requires little mathematical calculation and will teach you about quantum particles, the basics of probability theory, what quantum mystery is and more. This is the perfect introduction to the study of ultra-small. For more advanced topics in quantum physics, consider two courses from the Massachusetts Institute of Technology. The first, quantum mechanics: quantum physics in 1D potentials, covers the Schrodinger equation. Learn how to solve it for one-dimensional potentials, including a square well and a harmonic oscillator and understand the algebraic solution of the harmonic oscillator. The second course, quantum mechanics: 1D scattering and central potentials, covers scattering in one-dimensional potentials, angular momentum, central potentials and hydrogen atom. Learn about phase change, time delay, Levinson's theorem, and more. The courses are 5 weeks each and are expected to take 12 or more hours per week.
