If you're a loyal fan of two cool devices, the Samsung Gear S2 and the Gear S3, you can't ignore the Facer app. This is one of the best apps for Android Wear, which is a free download with tons of attractive themes. Facer app is the most complete and popular face watch app on the market today. It offers dozens of the most attractive options from major brands around the world. And now, with Facer 4.0, the company is taking a step closer to high-end watches similar to Fossil. So, let's welcome the Watchmaker series. There is a new partnership between Facer and traditional watchmakers to create authentic digital watchmakers, including brands such as Maurice Lacroix, ArtyA, Snyder Watches, MVM, Manufaktur Waldhoff and VAER Watches. There are 16 watch faces from the above companies with more designs coming. Why spend money on buying expensive apps look face but not sure that once installed, they will satisfy your will? Google Play has a great Facer app for you to develop a watch interface to suit your preferences. Let's look at some of the features of this great tool before deciding to open your wallet to buy all the app available. The Facer Premium app provides 1000 facial look samples with very customizable features. This allows you to change the numbers displayed, add widgets, and customize colors to create a unique and impressive watch interface. According to statistics, up to 80% of users wear traditional watches for special formal reasons. And the idea behind Facer here is to be a bridge between traditional watch brands and the booming smartwatch era. This means that users will experience the luxurious digital facial design of the watch and experience the smart features that smartwatches bring to the same device. In addition, we have amazing utilities such as the upgrade control platform to be more friendly and easier to use by rotating your watch face in a circular way with various appealing images and videos. You can also view the watch face in full-screen format. Facer also lets you capture wallpaper as you watch faces right in the app. The smartwatch and Android Wear devices have one cool feature that you can change any person watch you like. We no longer have to look at the boring one to look at the face. Instead, you can install an electronic dial, analog watch, altimeter face, compass integration and so many other designs that you can't even imagine. In this section we'll guide you on how to install more watch faces for your Android Wear device with the Facer app. The app contains a huge amount of watch faces for you to choose from. Facial watch for Android Wear is also an app. But you install it from your phone rather than download and install directly on your watch. As before, you need to know how to access where to change your face first. We'll talk about how to set the face clock. The way most people often use it to use my Android Android Go to the Google Play Store, search with the phrase Android to wear to watch face. There are many results for you to pick up. If you want to install it, the installation is simple. Once the installation is complete, use the watch face change guide mentioned above to find and use a newly installed face. In addition, you must use Facer software to face the Android Wear device. This app will be installed on your phone. Its the main task for you is to choose the face of the watch as you like. The app will then switch the watch face to display on the smartwatch. You can install Facer on this link. This app costs only \$1 if you buy a premium version from an online store. But it supports many beautiful faces designed by the entire community that are not just a few simple faces facerepo.com. You can choose the right models for the device that you use easily. You should use your phone directly to access the links above to download pages faster and more conveniently. Otherwise, once you download it, extract it, and copy it to your phone. When you choose a design that you love, click the appropriate Download button on the website is considered. The phone will immediately ask if you want to download this watch person using the Chrome or Facer app. Choose Facer. The new watch face is instantly added to the Facer app. Tap on it and on the watch-shaped icon in the top right corner of the app to push this design to Android Wear devices. On Your Android Wear, use the instructions at the beginning of the article to switch to facer. Immediately you will see a new design on the wrist. We are about to enter an era where changing the look of your watch will be almost as natural as changing the wallpaper on your smartphone. Android Wear finally offers a platform that offers the right level of customization, and the first creative tools appear. For example, the Face for Wear app, which allows you to create and share your faces for hours. But in principle, it only allows you to combine unique items. Facer is much more resilient, powerful and functional. Facer allows us to handle our facial watches with the most flexibility. The difference between these two apps is the one that goes between the paint and Photoshop, which is the processing system. The designs that are achievable with Facer can be much more complex and detailed. But, inevitably, the app is also more difficult to use. You need to be familiar with graphic software to come up with something good. If it's none of your business, don't despair. Facer offers a small selection of ready-made watch faces that are available from the side Navigation. Unfortunately, the gallery is not very convenient to visit, as it lacks a few sorting options, filters and other convenient interactions. At least the app chooses watch faces based on our interests and hobbies. In addition, it can offer suitable faces for the shape of the watch. To make sure it doesn't have a simple system for sharing and downloading created themes, Facer offers an online gallery that already boasts an extensive database of watch faces. This won't make you regret it when making additional purchases for the Premium APK version. The procedure is painstaking. From Facer, select the Import button from the My Faces page. You only need to go to the folder where the file was downloaded by default, download an SD card or USB storage. Once imported, they can apply the theme to the smartwatch or change freely. Facer also provides the ability to register to save themes. They are the themes you like the most among your favorites. You can also comment on other people's work and upload your design. Using facer's export feature, please note that downloading themes doesn't require an account. Facer is a huge and inexhaustible source of customization for your smartwatch. It offers a powerful editor and is well stocked, organized, and an easy-to-navigate gallery full of free themes. In the past there was an app that allows you to replace the external watch face like King Watch. However, English and Chinese support and hard to use interfaces, paying fees for most beautiful watch faces make access to them annoying and time consuming. In this section, we explain why Facer is a broader alternative that is regularly updated with a much simpler user interface. Facer is an app that helps users develop their facial clocks. It was written and tested by programmers before being hosted in the Apple App Store. Programmers invite users to test this software with a public link as we have shared. The number of test participants is full. Thus, later participants can no longer register for testing. To create an opportunity for new entrants to participate in the test, developers manually delete accounts that took part in the previous test without upgrading to new versions 30 days after the update. So to continue testing the Facer app, we need to be constantly updated when the developer releases a new update. Facer is just a third-party app to display the face of the watch. This is not a default face replacement. You can use Facer to replace the annoying and battery-consuming face of the default watch. The Facer app is handled by users. So it's not possible to install it all the time (limited number of users). Overall, Facer Premium APK is the best Watch Face app for Samsung Galaxy Watch, Gear S2 and S3 models. Setting up to look face easy. Install the Facer app from this link and keep the home screen for a while to open the list of established watch faces. It will bring up a few watchful faces that you can choose from by swiping left or right. When you see your favorite favorite Touch it to change the look of the watch as you like. You can install multiple watch faces on Facer, from Star Trek Watch Face to Garfield Navigator. by ApkDrod 08.28.2019 Version: Android Version: Options with Device Size: 61.52 MB Remember: www.APKDrod.com Facer Watch Face 5.1.20'101361 Apk Premium Subscription Latest is Personalization Android App Download the latest version of Facer Face Apk Premium Subscription to Android With Direct Link Facer Faces Watch is a personalization Android app made by Little Labs, Inc., that you can install on your Android devices to enjoy!
