Photo: Shutterstock Scammy Android app? No way. A relatively installed bit of malware known as the Joker - insert your favorite Heath Ledger meme here - penetrates a few more Android apps. And the interesting thing about this is that this Joker likes to sign you up for a subscription you don't want. As Check Point describes: The Joker, one of the most famous types of Android malware, continues to find its way into the official Google app market as a result of small changes in its code, allowing it to pass the Play Store's protection and barrier checks. This time, however, the malevolent actor behind the Joker took the old method out of the usual PC threat landscape and used it in the world of mobile applications to avoid detection Google. To realize the ability of users to subscribe to premium services without their knowledge or consent, the Joker used two main components - the Notification Listener Service, which is part of the original dex application, loaded with the C/C++ server to perform user registration. In an attempt to minimize the Joker's fingerprints, the actor behind him hid the dynamically downloaded dex file from his eyes while keeping what he was capable of downloading - a method that is well known to developers of Windows PC malware. This new option now hides a malicious dex file inside the app, like Base64 coded lines, ready to be decrypted and downloaded. I think it's important to know about how Google took time earlier this year to highlight its efforts to block apps that include Joker or Bread, as it's also known, from an appearance in the Google Play Store. As noted by representatives: Google Play Protect discovered and deleted 1.7 thousand. Unique Bread apps from the Play Store before ever downloaded by users. Readed apps originally performed by SMS scam, but largely abandoned this for WAP billing after the introduction of new Play policies restricting the use of SEND_SMS resolution and increasing the coverage of Google Play Protect. G/O Media can get commission. Mario Kart Live: Home Circuit. Joker, like Vanilla Ice, is back with a new edition, and it's not something that should be right now. There's no real way to prevent this malware from infecting your Android, except for the most important protection you have against apps like these: common sense. The kind of apps that try to suck you into installing this crap on your smartphone tend to look pretty crappy yourself. Screenshot: Check Point Research. In case it's not obvious using the screenshot above, let's walk through some basic warning signs that can help you malicious apps based on how they appear in the app store: It has no real purpose: There is no need to download a flower themed wallpaper app for your Android. Android. Download your favorite color images and make them your wallpaper. This fits the pattern: other app developer apps all sound like fraudulent copies of each other, too. Reviews are bad: For example, the app above has a low, 2.5-star rating through not many reviews. (I can only imagine what they said, there is no way to check now as Google has removed the app from the Play Store.) Screenshots are common: Honestly, I'd expect soft screenshots for an app like this, so it's not a red flag in itself, but something to keep in mind. It doesn't make much sense, does it? Also, your Android phone doesn't even have a 4K display. Simple, isn't it? Maybe for you, but less tech-savvy individuals can easily get tricked into installing apps like these. According to Ars Technica, 11 Joker-infected apps highlighted by Check Point have been downloaded a total of approximately 500,000 times. It's not a huge amount compared to the millions of downloads that other malware-loaded apps can get, but it's still not great. Speaking of if any of the apps on this list sounds like what you are currently on your Android, You can delete them and check the payment methods you associate with the android smartphone for any unexpected purchases: com.imagecompress.android.com.contact.withme.textscom.hmvoice.friendsmscom.relax.relaxation.androidsmscom.cheery.message .sendsmscom.peason.lovinglovemessagecom.file.recoverfilescom.LPlocker.lockappscom.remindme.alram The search for large wallpapers and backgrounds for your Android device is not all that difficult. There are a ton of applications that can do this task. In addition, a simple Google image search can also show you some unique options. The trick is to find apps that work best for you and find the kind of material you want to see. Let's take a quick look at the best backgrounds and wallpapers for Android apps! We also recommend NASA's official app for some excellent space wallpaper. AbstractRedditResplashSphaeraTapetPrice: Free/\$1.99Abstract is one of the new wallpaper apps on the list. This is Hampus Olsson, designer for all the wallpapers on OnePlus phones. It has different abstract wallpapers in different colors. There are about 300 backgrounds in total, and they are all in 4K resolution as well. We expect more to hit the app as time passes. It's also a great way to get all the wallpaper from OnePlus devices without buying one. The premium version goes for \$1.99. RedditPrice: Free/\$2.99 per month/\$29.99 per yearReddit is one of the surprisingly good wallpaper apps. There are subreddits with tons of decent wallpaper selection in multiple resolutions. The site also has a search for faster and simpler results. Most users post images on Imgur. This makes Imgur a decent wallpaper app as like it may take a bit to find good things. However, there are a lot of great things here. In addition, the main Reddit accounts are free. You can get more features with Reddit Gold. We recommend r/ultrahdwallpapers, r/wallpapers-wallpapers, r/wallpaper, and r/WQHD_Wallpaper for some really good things. It's also a great option for devices with certain screen styles like The Samsung Kick Hole. ResplashPrice: Free/up to \$10.99Resplash is one of the new wallpaper apps. It's a great source of wallpaper photography. The app boasts over 100,000 wallpapers with new wallpapers every day (or so they say). The user interface is decent and easy to use. Photos are more than high enough resolution for any phone screen. It even comes with some light settings features like dark mode and different layout options. There are some parts that could be better, but this is a very positive experience in general. It's also great for photography lovers. SphaeraPrice: \$0.99Sphaera is one of the most unique wallpaper apps. This allows you to take a segment of the map and paint it to fit your home screen. You can use maps mainly from anywhere in the world, including your hometown. In addition, the app has over 30 seats to choose from if you want something like this. Each wallpaper generates up to 4K resolution and you can change colors to match your style. Yes, it also includes AMOLED black as an option. Recent updates have also added a feature of live wallpaper if you want it. The app runs for \$0.99 up front, but has no other purchases in the app. TapetPrice: Free /Up to \$19.99Tapet is one of the most unique wallpaper apps. He doesn't come with a choice to choose from. Instead, you choose design and colors. The app makes wallpaper of your choice. It's a great way to get the good, minimal wallpaper in the colors you want. It also comes with Muzee support, download function and more. The app uses the screen resolution of your device to customize the quality. It helps to get guesses. Either way, it's really good. Vectorify da homePrice: FreeVectorify yes home is another unique wallpaper app. It uses vector graphics for clean, colorful wallpaper. Basically, you choose a style, choose a color scheme, and the app generates wallpaper. The wallpaper is high-resolution and there are some fun little designs. The process is also simple and there is a bit of customization as well. In addition, the app itself comes with a light and dark mode for your viewing pleasure. It's totally free and easily one of the best wallpaper apps. Wallpaper from GooglePrice: FreeWallpapers from Google is worthy For wallpaper. It has a small but decent selection of wallpapers. The app has other features, including a separate lock screen and home screen wallpaper, an automatic set feature for new wallpapers every day, and more. The app has a few mistakes. Also, his collection is not so great. However, it has some really high quality stuff. It's also completely free without advertising or in-app purchases. WalliPrice: Free with in-app purchasesWalli is another great wallpaper app. It has a bunch of unique works from various independent artists. You can find all kinds of things here. Some of the popular things include word backgrounds, abstract things, fantasy themes, and people. The app includes a simple layout, categories for easy viewing, and more. It is also a good place for artists to promote their benefits. You can find a lot of really unique things here that you just can't find elsewhere. You can also pay for things to support artists. WalpPrice: Free (with ads)Walp is a fun wallpaper app. It includes various stock wallpapers from a bunch of OEMs. It boasts collections from Samsung, Sony, Android shares, Oppo, and about two dozen other brands. You just open the app, surf through, and find the wallpaper you want. The app itself has a light and dark theme for your viewing preferences along with a blur filter, saturation filter, push notifications for new wallpaper and an automatic shifter if you want something different every day. It seems to have hit all the right notes and worked well in our testing. WalpyPrice: Free/\$1.99Walpy is another new wallpaper app on this list. It has a bunch of great wallpapers in pretty high resolution. However, this app also changes your wallpaper at different points in the day. It doesn't rely on timers like most. Instead, it waits for the phone to charge or on WiFi to change the background. There is a lot of variety. However, Walpy is mostly photography, so you won't find abstract stuff or anything like that here. It's a neat solution with some decent choices. Bonus: Google SearchPrice: FreePerhaps is the easiest wallpaper app Google Search. You're just looking for what you want. The plus is that you can get creative with searching and find basically everything you want. The downside is that you have to get creative to find good things at all. There is a lot of fluff when it comes to wallpaper and backgrounds and Google Search doesn't filter anything. Either way, we recommend you start with Google Search or finish with it if none of these other wallpaper apps do the trick. Bonus: WallPixPrice: FreeWallPix is a wallpaper app developer with several different wallpaper apps. Apps for specific devices and take into account things like blow a hole camera cut. One for the S20 line of devices, the other for the Note 20 device line, and one for the OnePlus 8. The wallpaper is just fine, but the vast majority of wallpapers use the phone to blow the camera hole as decoration or deftly hide it completely. We've contacted the developer's Google Play page so you can of them all. There is a fourth app, MinimalPix, which includes minimal wallpaper with AMOLED-friendly selection. There are other apps that cover a punch hole or notch on other devices as well as other developers if you want to go down that path. If we missed any of the best backgrounds and wallpaper apps, tell us about them in the comments! You can also click here to check out our latest Android app and game lists!
