Sat subject tests are all one hour long and all multiple options. However, they differ in characteristics, format and time pressure, which you will feel depending on where your academic strengths and weaknesses lie. Let's discuss the differences between the subject of the test and how you can beat the pressure of time. First, let's look at the unique features of the test. Unique features there are 21 different subject tests (I count E biology and M biology as two separate tests). Of these tests, language, biology, math and chemistry tests have some features, as explained below. Language subject tests Some language tests include a listening component. Audition tests are always given in the first hour of the day of testing, so you can only take one audition test on the test date. French, German and Spanish do not listen and listen to the options. Chinese, Korean and Japanese can only be accepted as listening tests. Language subject tests are also the only subject of the test with four options for answering the question. All other subject tests have five options for answering the question. Biological subject tests If you decide to take a biology subject test, you have the possibility of E biology or biology M. Although they share 60 basic questions, each of them has an additional 20 questions with an environmental or molecular focus. Learn more about the concentration that makes sense to you by looking at some practical questions. Mathematics test There are two math test subjects, Level 1 and Level 2. Level 1 requires two years of algebra and one year of geometry. Level 2 requires the same plus some understanding of trigonometry and pre-calculus. Level 2 also requires wider use (and comfort with) a graphic calculator. The Chemistry Theme Chemistry Test has a separate section on the bubble sheet for you to answer 5 special questions. These questions will ask you to compare the two statements by balancing equations or making predictions about chemical reactions. Other tests are relatively simple in their format. Since they're all one hour, the better question than: How long does SAT subject tests take? How many questions on SAT subject tests? That's where the answer gets a little tricky. How many questions do you ask on each test subject? Subject issues Literature No.60 History USA 90 World History 95 Mathematics Level 1'2 50 Bio E/M 80 Chemistry 85 Physics 75 French and German 85 (No85 with audition, 35% listen) Spanish 85 (No 85 with listening, 40% listen to Hebrew 85 Italian 80-85 Latin 70-75 Chinese with listening 85 (33% listen) Japanese and Korean with listening 80 (35% listen) There is not a huge number of changes in the number of questions in the SAT subject test The test is one that stands out as having significantly fewer issues. Don't think it means it's easier though! Teh Teh The test involves close reading excerpts that takes some of your valuable 60 minutes of test time. Now that you know how many questions are on each test, how can you use this information to maximize time management in these strict deadlines? Tips on the time time yourself when you cook As you can see on the chart above, almost all tests have more questions than minutes. This means that you have to spend less than a minute on each question. The best way to master the material and improve your pace in practice in simulated time conditions. Sit for exactly one hour with a practical test, and do not give yourself extra time. Record how you do and see if you can beat your score every time you practice. You will almost certainly see an improvement as you get more familiar with the test. Use questions from the real College Board tests to offer useful practical stuff here. You can find out about the content of each individual test and practice with questions taken from real tests conducted in the past. Using high-quality, appropriate preparatory materials is the only way to effectively prepare for the real thing. Moving quickly and efficiently The strict time of these tests does not allow room for long-term consideration or discussion. If the issue completely stumps you, don't waste precious time on it. Mark it off, skip it, and return to it at the end with fresh eyes, or just make an assumption and fill the letter on a bubble sheet. You can get lucky and get a point! If you miss questions, leave a small amount of time at the end to go back to them or fill the bubble sheet with guesses. Understand your ideal testing style will take three tests in one morning to step up or exhaust you? Will you be able to focus on two or three subjects in one sitting, or will fatigue prevent you from working out well? Tests of the subject begin between 8:30 and 9:00 a.m. You will get a five-minute break between each test. Some students get a rush of adrenaline jumping from one test subject to another. Others may have trouble switching gears between actors. Again, practicing in simulated conditions can help you figure out your testing style and whether you should take multiple subject tests on one date or space of them. Not only will the timing itself help create the conditions of a real test, but finding friends and peers in practice will also resemble the experience of testing alongside others. Guessing the sat Subject Tests strategy Unlike the overall SAT, for SAT Subject Tests, you lose a portion of the point for each question you answer incorrectly. Here's how scoring works for subject tests (all subject tests, except for tests in a foreign language, have options for answers. Foreign language tests have four answers: You get 1 point for each correct answer. Share point deducted for incorrect answers: 1/4 point point for five-choice questions. 1/3 of the item is deducted for four options. 1/2 of the paragraph is deducted for three options. Points are not deducted for questions left blank. If your final score is a fraction, it is rounded to the nearest whole number - 1/2 or more rounded; less than 1/2 rounded down. What does this mean for you? Too many random guesses can knock down your score, so you have to be smart about when to guess the question (and risk the point of deduction) and when to leave the issue blank (without any change in getting it right). Here are a few strategies to follow: If you can't eliminate any choice of answers, if you're really stumped by a question with multiple options and can't eliminate any of the options, don't guess yet. Skip the question at this point and go back to it after you have finished the rest of the exam. What if you still can't eliminate any answer choices? Then leave the question blank. Do not blindly guess without eliminating any answers. Without eliminating any of your answer options, you have a high chance of losing points by choosing the wrong answer. Here's the math: when asked with five answers, you have a 20% chance of choosing the right answer by guessing blindly. If you guess on five questions, chances are you get four questions wrong and one right, or zero points in total! That's why there's the wrong penalty response on the SAT Subject Tests - it makes blind guessing pointless (literally). But because of how randomness works, you may end up guessing incorrectly more questions than expected, leaving you with a net negative number of points. If you can eliminate only one choice of answer it may make sense to guess here. Cross the choice of answer that you know is wrong, and take a look at the rest of the answer options to see if you can narrow down your options further. In this situation, you will probably get more points than you lose by guessing. If you accidentally guess 16 questions where you can eliminate one choice of answers for each (with five answers to start), you get a full point on average (4 - (.25 x 12) and 1). It's not huge, but compared to leaving all these issues empty and getting nothing, it's a very good deal. But remember that this advice involves purely random guesses, which is rare. A definite answer may be appealing to you for any reason, so you will go for that choice rather than take really random guesses. Test manufacturers often try to make wrong answers more attractive so that students are more likely to cheat and choose them. Taking these factors into account, your chance of guessing correctly after eliminating one answer selection is actually less than 25 percent. In the example above, if got even three questions correctly, not four and 13 wrong, not 12 you'd lose a quarter of a point (3 - (.25 x 13) - 0.25). If you do do guess in this situation, choose the answer as much at random as possible, rather than mired in the wording of each choice. For example, you can always choose A for the questions you are guessing at (if it is a choice that you have eliminated) to make your guesswork as random as possible. If you can eliminate two or more answer options now we're talking! Even with the tricky wording of SAT questions, your chances of choosing the right answer are high enough here that it might be appropriate to guess. Let's say you have a set of 15 questions where you'll guess after eliminating two options (leaving you with three options to answer the question). With random guessing, it gives you a net total of 2.5 points (five questions correctly, 10 wrong; 5 - (0.25 x 10) and 2.5). Even if you don't do so well and end up getting another question wrong and one less right, that still gives you 4 - (0.25 x 11) and 1.25 points earned. From the answers you left in this scenario, try to guess randomly. It can still be risky to guess here, because we assume that all the response options you have eliminated are definitely wrong. However, if you've done your homework on the SAT and are familiar with strategies to eliminate the wrong answers, you should be good to go. Additional note: If you take a hands-on test, I would recommend noting all the questions you guessed, so you can later assess the success of your guessing strategies. It will also prevent you from simply ignoring the issues that you got right by accident, which you should still return if you don't understand the material. Summary Although these tests seem to have a lot of questions in a short amount of time, you will definitely be able to get to all of them if you are studying effectively. Prepare with high quality materials and train yourself in time management and walking, just like you would as an athlete. Taking two or three subject tests in one day may seem tough, but many students actually get into a highly focused area and feed on the energy challenge. Be strategic about how you schedule tests, but remember that you can always take subject tests again if necessary, most colleges will take your high scores. Click here to find out when you should take SAT subject tests in and around the general SAT and all your other tests and finals. What's next? Now that you are familiar with the length of subject tests, how can you decide which subject tests to take? This article will help you choose which subject test is best for you. Do you also take the SAT? Just like with the subject, it's important to know the format and timing of the SAT. Click here to learn about the SAT and how you can manage your time during this long test. Except Check out our famous guide to how you can score the perfect SAT score. Are you more interested in the ACT? Read about how long it's been and and You can pace yourself in all the different sections. Then read about what a good ACT score is for you. Want to improve your SAT score by 160 points or your ACT score by 4 points? We have written a guide for each test about the 5 best strategies you should use to have a chance at improving your score.
