Whether you want to see travel photos, your favorite series or present a presentation, big screens are always appreciated. You can use the cable to connect the device to the display and then enjoy the big screen. Just make sure your cable is enough to join the entrance or weekend devices. However, a longer wire means more hassle processing and transporting it. Also, imagine dealing with tangled wires every time you need a big screen. In short, the wire is an option, but apparently not the most convenient, at least nothing more than a wireless adapter. A network adapter is a compact plus easy-to-use device that works without long-term wiring. Here are seven of the best wireless adapter displays that you should consider for this job. Microsoft Display Microsoft's display adapter is one of the solutions for all your devices and apps. The adapter does not restrict technology to specific content or streaming options. In addition, this compact device is certified by Miracast technology. It can provide a reliable connection with up to 23 feet range under normal conditions, which can decrease slightly in the case of walls and obstacles. Microsoft's display adapter is very similar to the drive handle with the HDMI port in front and the wire with the USB ending on the back. The men's HDMI port delivers the signals to the display screen, while the men's USB cables serve as a power cable.
