TubeMate 3.3 recently released! Click to check the changes! Please follow our FB page for news and advice! Certified Sites (3.3.5.1245) Previous version (2.4.21.753) Previous version (1.05.59) Copyright (c) 2010 tubemate.net All rights reserved. TubeMate is a software app that allows users to upload and save their favorite videos from media hosts such as YouTube. This is due to a user-friendly interface, and this program is great for beginners. TubeMate is an absolutely safe app as long as it is downloaded from a reliable internet portal. It is best to avoid unknown vendors, as the authenticity and security of the software cannot always be verified. Users will not be required to pay any type of fee when downloading and installing TubeMate. However, additional data usage charges can be applied depending on third-party wireless carriers. This is why users should consult with their service contract to find out more. TubeMate will need about 7.23 megabytes of free operating space to function properly. However, there are times when a specific operating system may need a little more or less free hard drive space. The download process is extremely simple. First, the user will switch to the URL associated with the desired media content. The green arrow will appear on the display after the page is loaded. Clicking on this arrow will start downloading. The time it takes to complete the transmission will depend on the size of the file and its resolution. Developers recommend storing any media content on an external SD card. This is the best way to avoid the memory impact of the device itself. However, files can still be stored on the hard drive. This option can be changed by accessing the user preference menu. TubeMate has the ability to download 3D video in the same way as other media content. However, the user will still have a 3D-compatible player to watch such videos. Otherwise, they will appear incorrectly. You can always clear your search history. Once a character is entered into the search box, a clear search history option will appear at the top. Clicking on this area will automatically erase recent history. You can also clear the same story through a standard preference icon on your YouTube homepage. Users can choose the video resolution before the download process begins. Sometimes this may be necessary in order to take into account the performance and size of the mobile device display. Note that HD or UHD video will require more storage space in the operating system. While was primarily designed to upload videos from YouTube, other popular websites may be available. Examples include Vimeo, Dailymotion and Veoh.Editor's PicksRead moreArticleRead moreArticleRead more This is the perfect program to search and download videos for free on your Android smartphone.
