On modern devices there are still voice recorders, already in the form of separate applications. Many manufacturers build such software into firmware, but no one prohibits the use of third-party solutions. Especially if you want to hide the fact of the record. We've put together the best hidden voice recording apps: Smart Recorder is a free and easy-to-use voice recorder for Android. Designed for continuous recording of high-quality sound, has a simple and clear interface. The silent pass function helps reduce recording time by omitting fragments of relative silence. This saves time listening to recordings with lots of audio pauses. For example, it allows you to catch a sleeper conversation by reducing the recording from 8 hours to 5-15 minutes. It can be used for small notes for your research. For a student, this app is irreplaceable! You can record the entire lecture and take notes later! Even when the phone is in your pocket and records a lecture, the sound is clear. And if you are you to hide the fact that you're recording, you can use the recording in the background function. This app is not designed directly to record phone calls. Some manufacturers block the caller from recording for privacy or legal reasons. Therefore, by default, the app stops recording during the call. This can be disabled in settings, but please check your local laws and make sure that this feature is not locked on your device. Key features: Automatic and manual sensitivity control for Silent Skip mode (beta). A real-time sound spectrum analyzer. Record in the background (even when the display is turned off). Lots of options to share/send a record. The microphone amplification calibration tool. Easy to use and reliable.
