This article instructs you how to update your HERO3 camera software. You can update your camera with a web gopro.com or use the GoPro app for a wireless update. If you want to use the GoPro app, check out this page. Continue reading you want to download from the website. You will use this process if you are updating to a new version of the camera software or if you are re-updating to an existing version already on your camera. Some of the reasons you want to manually update your camera software will be (1) if your camera hangs on the video camera icon right when you turn it on, (2) the GoPro App does not connect to the camera or showing a live preview, or (3) you want to change the Wi-Fi name of your camera and password. Here's how to manually update the HERO3 camera software. Go to the HERO3 software update page and click the Update camera manually. Fill in all the information on the front page, including the serial number, name and email address. Next, choose what type of update you want to do. You have the following options: Wi-Fi and a Software Update Wi-Fi update OnlySoftware update just if you're not sure which one you need, it's best to choose Wi-Fi and a software update. The rest of the instructions will assume that you are using the Wi-Fi Software Update option. If you use one of the other options, your procedure will be only part of the steps listed below. Once you've chosen the upgrade type, click Next Step.Step 1 - Set up WirelessNote: If you've only chosen the software update option, you won't go through that step. This is the step on which you create the name of the camera and the Wi-Fi password. If your camera has had problems connecting to the GoPro App in the past, renaming the camera and resetting your password can clear up the problem. Here are the password requirements: Your password must be at least 8 characters. It can contain the following characters: Lower and top letter cases, numbers 0-9, on the symbol |, dash - and emphasize J. Step 2 - Download the FolderThis update is a step where you upload updates to your computer. Just click the Download update file and your update will be downloaded. Step 3 - Insert MicroSD Card At this stage you will need to insert your camera's microSD card into your computer either using a microSD card adapter or a microSD card USB reader. Step 4 - Move the update file to MicroSD CardIt's a step where you put a camera update on your microSD card. We'll walk up the steps.1 Find the UPDATE.zip folder you just downloaded, depending on the operating system, you'll find the UPDATE.zip file in different places. If you're not sure where it is, you can just search the file to find it. UPDATE.zipThis is important. The update won't work if you put this entire zipper folder on the MicroSD map. Once you unpack it it will create an UPDATE.3 folder. Place the software update folder on the SD card. Now you need to put the entire UPDATE folder on the root level of your SD card. To do this, you need to open a microSD card on your computer using a microSD card adapter or a microSD USB card reader. Find an SD card in your computer window if you're in Windows or in the Finder window, if you're on a Mac. Your SD card will be called something like a removable disk (E:), NO NAME or UNTITLED. Open the SD card twice clicking on it. and you should see them in the window. It's safe to remove the SD card. To do this, find an SD card in the Computer window if you are on your computer or in the Finder window, if you are on a Mac. Right, click on the SD card and click the Eject button. If the camera is connected to your computer, physically disconnect the camera from your computer and make sure the camera is powered off. Final step: Update the cameraIf it's not yet true, insert the microSD card into the camera while it runs off and is disconnected from the computer. Next, the power on camera with it is still disconnected from the computer. The update will start automatically. Allow the camera to go through the update, and search for a message on the screen that reads the update is complete. The camera will power the loop several times during the upgrade and eventually on as soon as the update is completed. How do you do that? This article instructs you how to update the HERO3 camera software. You will use this process if you are updating to a new version of the camera software or if you are re-updating to an existing version already on your camera. Some of the reasons you want to manually update your camera software will be (1) if your camera hangs on the video camera icon right when you turn it on, (2) the GoPro App does not connect to the camera or showing a live preview, or (3) you want to change the Wi-Fi name of your camera and password. Here's how to update the HERO3 camera software: Go to the HERO3 software update page and click the Update camera manually. Fill in all the information on the front page, including the serial number, name and email address. Next, choose what type of update you want to do. You have the following options: Wi-Fi and a Software Update Wi-Fi update OnlySoftware update just if you're not sure which one you need, it's best to choose Wi-Fi and a software update. The rest of the instructions will assume that you are using the Wi-Fi Software Update option. You use one of the other options, your procedure procedure be part of the steps listed below. Once you've chosen the upgrade type, click Next Step.Step 1 - Prepare your camera: To prepare the camera for the update, please do the following: Insert a blank MicroSD card. To make sure it's empty, don't forget to reformat your SD card either into a camera or on a computer with a card reader. Power at HERO3Check battery levels. The battery level indicator must show at least 2 bars. Connect the camera to your computer. Step 2 - Set up WirelessNote: If you've only chosen the software update option, you won't go through this step. This is the step on which you create the name of the camera and the Wi-Fi password. If your camera has had problems connecting to the GoPro App in the past, renaming the camera and resetting your password can clear up the problem. Here are the password requirements: Your password must be at least 8 characters. It can contain the following characters: Lower and top letter cases, numbers 0-9, on the symbol |, dash - and emphasize J. Step 3 - Download the FolderThis update is a step where you upload updates to your computer. Just click the Download update file and your update will be downloaded. Step 4 - Move the update file to MicroSD Card This is a step where you will place the update files on your SD card and update your camera. We'll walk up the steps.1 Find the UPDATE.zip folder you just downloaded, depending on the operating system, you'll find the UPDATE.zip file in different places. If you're not sure where it is, you can just search the file to find it. Unzip UPDATE.zipThis is essential. The update won't work if you put this entire zipper folder on the MicroSD map. Once this file is unpacked, it will create an UPDATE.3 folder. Find the update filesIn the UPDATE folder you will see the update files. Don't click twice on any of these files. Check that you have the right files for the camera: Once you've unpacked the Update.zip folder on your Mac or Windows, you'll see a new window open with software update files in it. There will be 4 files if you set your camera name and Wi-Fi password in Step 2 - Set up wirelessly. If you decide to perform a software update is the only option, there will be 3 files. Here's a list of the files you'll see for your camera. Remember; don't click twice on any of these files. HERO3: White edition:HD3.01-firmware.binWF3.01-app.binupdate.cmdsettings.in (Note - You won't have this file, if you did a software update only download)HERO3: Silver edition:HD3.02-firmware.binWF3.02-app.binupdate.cmdsettings.in (Note - You won't have this file if you did a software update only download)HERO3: Black edition:HD3.03-firmware.binWF3.03-app.binupdate.cmdsettings.in (Note - Note - won't have this file if you've done a software update just Place the software update files on the root level of your SD card. To do this, you need to open the SD card on your computer using a card reader or camera. To open an SD card on a computer using a camera, power the camera with an SD card is inserted and then connect the camera to the computer. Next, find an SD card in the Computer window if you are on Windows or your Finder box if you are on a Mac. Your SD card will be called something like a Removable Drive (E:), NO NAME or UNTITLED. Open the SD card by clicking on it twice. A window will open that shows the contents of your SD card. Then drag all 4 software update files that we listed above into the empty space in the middle of the SD card window. If you see MISC and DCIM folders in the SD card window, place the files next to the two folders, not inside them. The files will be copied and you should see them in the window. It's safe to extract an SD card: To do this, find your SD card in your computer window if you're on your computer or in the Finder window, if you're on a Mac. Click the right button on the SD card and click the Eject button. If the camera is connected to your computer, physically disconnect the camera from your computer and make sure the camera is powered off. Final step: Update the cameraIf it's not yet so, insert the SD card into the camera while it's running off and off from the computer. Next, the power on camera with it is still disconnected from the computer. The update will start automatically. Once the camera honks and turns itself off, power it back by pressing the power button once. You should see 00 on the file counter, indicating that your camera's software update has been successful and your camera is ready to use. Use. gopro hero 3+ manual update not working. gopro hero 3 silver manual update. gopro hero 3 plus manual update
