new tab. Swap incognito mode. The menu was previously unlockable, fiddling with browser flags settings, but is now available by default to all users. However, you need to upgrade to Chrome 78 for Android to use the new menu shortcut-check the Chrome app page in the Google Play Store to see if you need to install a new update. The Internet is rich in all sorts of content that often needs access to personal information, and Chrome is built so that you can take advantage of almost all of it. Does this mean allowing the microphone to have chatter or allowing Home Depot to see your location so they can show you what is being sold, deciding what type of information you share and what happens when you download a web page should be under your control. The chrome developers agree, and they made it easy to see what can and can't happen when you visit a website. There is a simple tool to access all these switches in one place. Everything you need to know about what a page is doing or trying to do when you visit one click. In Omnibar, a multi-purpose Chrome address bar and search box, you'll see an icon to the left of any website address. These icons are also a clickable button of sorts both on your Chromebook and in your desktop Chrome browser. Here's everything you need to know about those icons. When you click on the icon, you will see a dialog window underneath it. It is there for each page and will show the individual settings you have in place for that particular if you have changed any by default. Most of all listed are pretty self-evident. We all know what images are, and if there are any pages on the internet that we don't want to download them automatically. The same can be said about Flash and pop-ups. The defaults are Chrome and are designed to offer a rich web experience while keeping things that are most often associated with security risks in check. Pop-ups will be blocked, Javascript and background synchronization page will be allowed, and everything else will be set to ask for explicit permission before this happens. A web page will never be able to your location or turn on the camera without asking you if you haven't changed the default settings that you can find in Chrome settings. Advanced Settings . Content. You can change everything you see see On the fly. Click the combo box to make a new choice, and when you've done all you have to do is reboot the page you're browsing. None of the changes you make here affect any other sites and you can't constantly break anything messing around with them. Having a page setting up a menu like this is a pretty powerful privacy tool and we suggest anyone who uses Chrome take a look at what's going on on the websites they visit. Any changes you make will persist until you change them back, and the worst that can happen is the page is not loaded correctly - which can be fixed by changing things back as they were. If you find yourself typing the same email address, phrase or sentence over and over again, stop - there's an easier way! By adding a quick text label to your Android phone's personal dictionary, you can enter the full offer in just a few letters. You may not be able to think about some things that you enter repeatedly, but if you pay a little attention, you will definitely find some models. Text labels can be super useful in a variety of situations: Email Email Names/Addresses/Phone Numbers Common Phrases: I'll call you in a second, Where are you?, Lunch today? Complex characters or emoticons (like ☺) Sound good? Here's how to do it. To get started, you first need to go to the phone settings menu. Pull down the notification shade and tap the cog icon, or open the app drawer and find Settings. From there, scroll down until you see languages and inputs (or something like that). In the Languages and Input menu, select the Personal Dictionary option. Here you can add custom bits of text by clicking the plus sign in the top right corner. Use the Shortcut box to add a shortcut to the words of the text. Boom, that's it! Now that you enter the shortcut, the text version you typed will be revealed as a sentence - it won't automatically replace the text in most cases, so you'll have to click on the offer. It's worth noting that, depending on which keyboard you use as the default keyboard, this setup may or may not actually work the way you want. For example, Google Keyboard will refer to this option, so any shortcuts you add will appear. But if you use something like SwiftKey, it won't work. Bummer. quietbits/Shutterstock Google Chrome and Mozilla Firefox on Android allow you to link to websites and web apps you access most often. Here's how to create a shortcut and add it to your device. Add the website to your home screen with the Chrome Open Chrome app on your phone and go to the website you make in a home screen shortcut. After downloading the website, open the Chrome Settings menu by clicking on the three vertical dots found in the top right corner. Next, select add to your home screen. A A a screen that will allow you to place the icon automatically or choose where to place it. On this Add to the home screen you'll see a preview of the label icon. Click Add automatically to place a new icon on the home screen of an Android device, wherever space is available. If you want to place the icon somewhere else on the home screen, tap and hold the icon and drag it to the right place. Add a website to your home screen with Firefox Open app Mozilla Firefox and go to the website you want to turn into a home screen shortcut to your Android device. Tap and hold the website URL in the address bar until a pop-up menu appears. Choose add a page shortcut. A new window opens and you'll see a preview of the 1x1 icon. Click Add automatically to add an icon to the device's home screen. To set the exact location where the label is on the home screen, tap and hold the icon, and drag it to the right place. Android devices are very customizable and multi-amable, but some of the best time-saving shortcuts in Android are hidden. Here's how to find these features to make quick photos, send texts, and call without fumbling on the list of apps. You'll also find tips to make your Android experience effective with Google Assistant and voice commands. The directions below should apply no matter who made your Android phone: Samsung, Google, Huawei, Xiaomi, etc. If you only have a fraction of a second to run your smartphone camera and capture a photo, there is a shortcut that will quickly open the camera. On many Android smartphones, double-click the Power or Home button. This label should work on most new Android devices. To launch the camera on many Motorola smartphones, turn on the gestures on your phone and then twist your wrist. Lifewire If your smartphone is running Android Marshmallow or later, run the camera with a lock screen. Tap, hold and swipe the camera icon and attach the photo without unlocking the phone. When the camera app is closed, the phone displays the lock screen. No one sees your personal information or compromises your device. When you're comfortable at home or at work or anywhere you don't feel the need to lock, use Google Smart Lock. With Smart Lock, the device can be unlocked when it's in a safe place, paired with a reliable device such as a smart watch, or recognizes your voice. You can also use this feature to save passwords. Android has several gesture control options that vary depending on the device and operating system. In the Android warehouse, which includes all Pixel and Nexus devices and Third-party flagship smartphones, use one finger to swipe down to see notifications, and then swipe down a second time to view quick settings such as Wi-Fi, Bluetooth and airplane mode. If your phone's working Nougat (7.0) or later, quickly switch between the two apps using the Review button, which is next to the Home and Back buttons. Click the Review button once to show your open apps. Tap the Review button twice to see the previous app you used; this makes it easy to switch between two apps. If you need more multitasking, click and hold the Review button to use split-screen mode. Lifewire Android 9.0 Pie introduces a setting that removes the Review button in favor of a swipe gesture that displays all open apps. You can also swipe up twice to open the app drawer. Phones with Android 7.1 or later displaying app shortcuts in the same way that a right tap on a PC displays a menu of options. Click and hold an app that supports this feature to display a list of shortcuts. For example, the Gmail app shows a list of accounts connected to the device, a compilation button, and a widget menu. Devices that run Marshmallow and then search function in the app drawer. On earlier versions of Android, double-click the box icon to start searching for apps. The box icon is at the bottom of the screen, above the Home button. To update a website, social media page, or other content, pull down on the screen. There's also a gesture to find information about any app, such as the amount of storage and data it uses, app notification settings, and permissions. Go to the app drawer, click and hold the app icon, and then click the App Info button to open the settings page for the app. The widgets add a shortcut function to Android. For example, use built-in widgets to create widgets and contact widgets for your favorite people. To create a widget, tap and hold the home screen, and then select the widgets. You'll find widgets that automate routine and frequent tasks: The Contacts widget automatically dials the call of the chosen contact. The Chrome widget places a window on the screen that contains a list of Chrome bookmarks. The Gmail app shows the selected Gmail email folder in the window with a changing size. Android also has accessibility features. To set up these settings, go to the phone set settings and select the answers and call ending. Then click the Power button to disable the call and click Home to answer the call. Most new Android smartphones support Google Assistant. To Google Assistant OK Google commands on any screen, open the Google search app, select settings and then choose the voice. On the Voice screen, select GOOGLE OK and turn on Google Assistant. You have the ability to use Google Assistant when the screen on and when the phone is locked. Use Google Assistant to search the web for information and answer your questions. Use voice commands to send a text message to a friend, set up a reminder or appointment, make a phone call, or find directions on Google Maps. Team voice commands When you need a loud solution while driving, but it's also handy when you don't feel like typing. Input.
