Opera, a browser that has been around for years but no one actually seems to use, has a minimalist version for Android phones. It claims to keep data, respect your privacy, offer smoother browsing, and even download files more intuitively, but so do all other mobile browsers. Does Opera Mini really offer something new? Smooth viewing with football focusOpera Mini is an internet browser for Android phones. It's a long-standing but less popular desktop browser, so how does it do when you use it on the go? The installation process is quick and simple. The app that opens is also very intuitive and seems more simple than the competitor-navigation options appear in the bottom line here and less than in other browsers. Even the settings seem more basic than other browsers - only the subsection of commonly used options pops up when you hit the cog icon and you have to go to another menu to see all the variety of options. This keeps the reduced mobile interface space clean and clear and highly valued. Obviously, you can edit the Opera Mini settings so it appears exactly the way you want it to, but the home screen is by default a bit of a mess. There is a default news selection that is presumably chosen by the algorithm. You can edit this in the settings, but no matter what you choose, the news feed looks cluttered and spammy. News sources mix with ads, and it's hard to say what's what. Presumably, this is where opera Mini's football focus comes in, but don't worry - the entire news area can be turned off in the settings, leaving you with an edited standard selection of the most used websites. The lower Bar Opera Mini offers a standard forward, backward, search (you can also use the address bar to search as usual), the tab manager and the minimum settings menu. The tab manager is easy to use and, at first glance, seems more intuitive than Chrome, for example, especially when you have multiple tabs open. Similarly, the download manager is also organized and easy to manage and was enjoyable to use. While the Settings menu on Opera Mini is minimalist and clean, it remains to be seen whether there are enough options for more demanding users. Compared to Firefox, for example, the number and width of the advanced settings offered by Opera Mini seems very limited. For some users, this approach to give way will be a welcome change, but others will feel deprived without specific control over every aspect of their browser. Where can you run this program? Opera Mini runs on Android phones and tablets running Android 4.1 Is there a better alternative? If you have Place for opera, opera mini will probably seem like a good option, especially if you want a lighter browser than a full fat opera for Android. For everyone else, however, it does not offer enough differentiation of factors people from the mobile browser big boys like Chrome and Firefox, especially if you have no interest in football and the news feed on the home screen is not a draw. Opera Mini has a lot of positives going for it, but there's just nothing special enough to really let it stand out. There are a number of features that are particularly well designed, and for a small number of users, they will actually provide a strong draw. For everyone else, however, there's not much difference in speed and organized download features, clean and clear settings, and multicolored options just aren't enough to entice anyone to make the jump if their current browser isn't causing a problem. Should you download it? If you're unhappy with the current browser, give it a whirlwind. With some tweaks to remove the annoying news feed (simple process), this is not a bad option at all. If what you're using now is good, then stick to it-opera mini just isn't different enough to justify the change. Earn money and get great dealsTeamwork and project management softwareA full version of the game for androidAn app for making home hunting breezePC and console game comes to mobile'uck and detailed standalone guide Star Walk 2 is a vastly refined starfall experience that takes ideas from all the other virtual planetarium apps out there and adds amazing visuals and a great soundtrack to enhance the atmosphere. But is it worth the relatively high asking price that doesn't even unlock all the features? For casual starships, perhaps the added atmosphere is a plus, but professionals and enthusiasts won't find anything here that other, more utilitarian apps don't do for free. More images Look into the sky with Star Walk 2 and stargaze with plenty of information in the palm of your hand. Star Walk 2 is a premium stargazing tool that takes you on a journey through the stars, allowing you to determine just what it is that you are looking at just by holding your smartphone to the sky. The app uses a huge database of celestial bodies, coordinates, built-in sensors of your phone and location data to show you what is in the sky. You can also search for objects, and the app will show you where to look. The app has amazing 3D models of various celestial bodies and phenomena ranging from planetary nebulae and comets to planets, missions and human-made satellites. It also comes with an atmospheric soundtrack and amazing art for constellations inspired by minimalist art styles. Download Android: Opera 5.1 left behind, and its final release is a significant alternative to Android. Along with caching a page outside the phone, making slower connections tolerable, the opera added semi-solid semi-solid and kinetic scrolling, plus speed improvement. As Adam pointed out in his iPhone-based mobile browser speed tests, the Opera Mini absolutely flies when it comes to downloading a web page, although it can be rough around the edges. One of the big improvements in The Opera 5.1 Finale is to improve the look of the image when the page is zoomed in, so it helps with the speed/appearance of the compromise, and Opera has also made the page navigation a little easier. The pinch zoom mechanism was a bit rough in my morning tests, but it's still probably preferable for most users about the hand-held magnifying glass buttons. This morning Apple surprised everyone by endorsing the Opera Mini web browser for the iPhone and ... Read moreOpera 5.1 Finale is a free download for Android phones, with the CD code offered on the link. Beta users should be able to upgrade from their app market at this time. Opera Mini (via Gizmodo) iPhone/iPod touch: Consider Opera's bluff. Apple's View of the Opera Mini browser maker in Apple's App Store was approved, giving iPhone OS users a browser that uses compression on the server side for slow connectivity, synchronization with the desktop opera and offers other perks. Our brother site Gizmodo tested the dexterity of the Opera on a weak EDGE connection in New York, and decided that it was actually kind of great. Opera's mini browser on the iPhone also offers a more faithful tab viewing experience than the built-in Safari, and can sync bookmarks, speed dial launch thumbs, and even your current status of browsing desktop browsers and other mobile devices. Why, you probably ask if I want another browser on my iPhone when Safari's mobile... MoreIf you often struggle with a slow connection, or just want to try something new on your iPhone, give Opera Mini a go. This is a free download for devices running iPhone OS. Opera Mini web browser iTunes App Store If you are a fan of the Opera web browser and would like the same functionality on your phone or mobile device, you have a choice between Opera Mobile and Opera Mini. Which one is right for you? Opera Mobile is designed for smartphones, tablets and PDAs. It is a strong browser with lots of features and supports secure websites. Opera Mini is a downward version of the Opera Mobile browser, but it has some advantages over Opera Mobile, and some users prefer it. Lifewire Opera Mini works by submitting a request to Opera Servers, which in turn loads the page, compresses it and sends it back to the browser. Because pages are compressed before they are transmitted, this can lead to increased performance, making some web pages load faster than in other web browsers. Along with compression Opera servers also optimize them for display on mobile screens. This means that some pages will look better in the Opera Mini browser than on Opera Mobile or other full-fledged web Opera Mobile makes navigating the web easy with an interface that has standards from desktop browsers like buttons to go back one site or forward one site and update button, although we wouldn't mind seeing the update button replaced by a favorite button. Favorites are available through the action menu, which also allows you to bookmark the page, go to the homepage, and go to the top of the current page. Opera Mobile also allows you to open multiple windows so you can flip back and forth between pages. When browsing a page, you can use the menu to increase the page to 200% or increase until the page is 25% of its original size, which is enough that most pages will match as much content on the mobile phone screen as they will on the desktop screen, although the text becomes unreadable in this size. While opera Mobile has room to scale, Opera Mini has a simpler interface. There are only two phases - regular and enlarged, but you can switch between them using a simple tap, making it much easier to use. Opera Mobile supports secure web pages, while Opera Mini is not the best browser for secure sites. The high-memory version of Opera Mini will support encrypted pages, but since all websites are downloaded through Opera servers, the page will be deciphered and then re-encrypted. Opera Mini will download encrypted pages, but they will be deciphered. Opera Mobile or Opera Mini? Ultimately, the choice comes down to preferences. Whether you go to secure sites on a regular basis or really enjoy being able to open multiple windows in your browser, Opera Mobile may be the best choice. On the other hand, opera Mini's simple scaling features make browsing non-mobile websites easy. If you don't need multiple windows and don't go to many secure websites, Opera Mini may be better for you. Finally, like many others, you may decide not to choose at all. Many people like to have Opera Mobile and Opera Mini browsers installed on their mobile device. Simply put, Opera Mobile is good for doing some tasks, while Opera Mini is good for others, so the best of both worlds is to install both.
