First, for those wondering why all the reviews are 5 stars, it tries to get you to rate its 5 stars before using it. However you don't need to let you just go out that pop-up, but apparently a ton of people don't seem to realize that's why all 5 stars say I hope it works... and secondly, this app is rubbish. It literally randomly generates random numbers and letters and acts, how it generated them because of your Wi-Fi you're connected to and some educated assumption going on, but if you use this app you're probably not connected to Wi-Fi you want to get a password and I don't even have any Wi-Fi at all so the fact that it guessed that the password to Wi-Fi I'm connected to when I'm not connected to any just shows like a fake and a waste of time is an app. And there are tons in the shopping apps in order to give you more random codes, which is just a big scam. I'm not one easy to write off things as a scam, but this, my friends, is a scam and a scam and just flat out stupid and rude asking people to rate before using and the people who do it should all be kids who don't look at it up to the rankings. I mean, come on. This garbage app is simple and simple. WiFi WPS WPA Tester is an app that invites you to check your WiFi vulnerability by hacking it. The app was made to check the security of your password and connection. Download the WIFi WPS WPA Tester and improve your online security.
