Solar planes don't have much on board. They are ridiculously flat and thin, inviting the wind to lift them rather than knocking them around. The body is strong and light, often made of carbon fiber tubes for the frame, with a strong fabric like Kevlar stretched through it. Somewhere in the structure, you'll see an X or V that prevents the plane from rolling. Most aircraft are battery-powered at night, although some have used fuel cells. The batteries are light and energetic and are usually arranged in a sheet. The solar plane of zivethi, which holds the current endurance record, runs on a sheet of lithium-sulfur batteries (source: Bush). The batteries are connected to engines that rotate the propellers. Advertising You can not miss the solar panels that are the skin and heart of the aircraft. They don't look like rigid, bulky solar panels on satellites or a solar house. These millimetre panels are thick, flexible enough to roll, and are incredibly efficient and expensive source: Bush, USO. Solar panels are also connected to the propeller. Light, voltage and wind sensors will be installed on board the aircraft, as well as the method of transmitting this information to the pilot. If you're wondering where the wheels are - there's no need to worry. Some solar planes basically land the landing gear in flight because you're not going to need them. The aircraft can land on skids or emergency landing. Engineers get rid of every bit of weight you can imagine, says John Del Frate, an engineer at NASA's Dryden Mission Research Center. Some solar aircraft are true UAVs, or unmanned aerial vehicles. In addition to takeoff and landing, autopilot flies on the plane. Pilots use on-board systems to track the aircraft and control its engines from the ground. Unmanned aircraft include NASA's Dead Helios, Marshmallow, and Aurora Flight Sciences' Odyssey and SunLight Eagle. Other solar aircraft can support the pilot. Examples of manned solar aircraft include NASA and AeroVironment's retired Gossamer Penguin and Solar Challenger, and another Solar Impulse group that aims to circumcing the globe. Not sure how to reserve seats for family members at the wedding ceremony? We've got your back. Your parents, immediate family, relatives, Grandparents deserve a seat in the front row to your I Dos, and while it's always a good idea to appoint bailiffs to help cope with reserved seating, it's also thoughtful to take the extra step in making reserved lines or chair signs. If someone unknowingly sits in a reserved row or seat, it is a little inconvenient for the bailiff to ask him or her to move, but you can avoid this sticky situation altogether by planning forward and clearly reserved seating signs to let other guests know that these seats are being accepted. And while there are so many cute and smart ways to designate these special ceremony venues, we've put together a few of our favorite ideas to help inspire your own holiday. Lauren Peel Photography The easiest way to reserve rows of seats during the ceremony with a sign is to very clearly signal to other guests that the line is taken. You can choose something simple, like signs made from heavy card stock and strung with tape in the color scheme of your wedding; Or, you can choose something unique like these hand-painted wooden signs. Hang them on chairs along the aisle so they are in full view of all the guests. Caroline Tran If you plan to reserve specific seats for VIP family members, then assign each guest's chair by hanging a handmade letter board sign from each seat. It also makes for such a wonderful photo op, doesn't it? Katherine Leonard Photography Alternatively, instead of board signs, you can print out fewer reserved signs for VIP family members and tie them to the back of each guest's chair with twine or thin ribbon. Jake Thomas Photography These adorable heart-shaped plaque signs are an easy way to assign specific locations to the ceremony- just write the names of the guests and clip them on the back of each chair. De Jaureguis If saving specific seats is not necessary at your ceremony, then assign a common reserved seat by placing a simple reserved sign on each chair cushion. We love the elegant look of this calligraphic delivery tag - it's also tied to a small bunch of fresh, fragrant lavender. You can always replace reserved tags with individual name tags if specific locations are important. Jen HuangG In True MOD VIP, you can skip the signs altogether and assign reserved seating, draping long length tapes through saved strings. Katie Grant Photography Assign reserved seating, draping garlands of greenery or flowers over these chairs. They will easily stand out enough to report that they are a little different from the rest while still adding to the overall decor of the aisle and space. The Day Collective chances are guests that these special seats are reserved for also sit very close to your heart. Let them know you value your relationship with them by writing every single one heartfelt thanks to the note and placing it in their place for them to read just before you walk down the aisle. Bonus tip: Add a photo of you together or even a photo from your wedding day to really up the ante. Jennifer Young Studio there are three different wedding moments that cause guests to shed more tears: warm-warm speeches, first or parent-child dances, and almost every aspect of the ceremony. Assign your VIP seats with a thoughtful souvenir that can also double as a wedding favor. Custom embroidered handkerchiefs with your guest's name or initials and wedding date- even a sentimental message if you want and leave it on the designated chair to save space and catch any happy tears that may come. Forming Design Getting quality with a closed eye while sitting on a plane is almost impossible. No matter how many times you move, a comfortable position just never seems within reach. And those neck pillows? Pointless. Formation Design, a product development firm based in Atlanta, is looking to change that, although finally bringing comfort to the air travel experience. According to the Daily Mail, Formation has proposed a new aircraft design with 8 Super Throne suites that will allow first class passengers to sleep completely receding above more traditional seats. Each pod like the suite will also feature a high-definition TV, dedicated storage space, and light to read. Formation Design And while this is not the first aircraft design to show luxury-inspired seats, the enhanced design will allow for more first class and business class seats than other aircraft currently offering. The Daily Mail also notes that while the idea for Formation Design is not yet slated for production, it has been shortlisted for the 2016 Crystal Cabin Award, which recognises excellence in aircraft interior innovation. Fingers crossed that recognition helps Super Throne become a reality. In the meantime, though, you can always visit the world's quirky airport lounge for your luxury travel fix. You may be able to find more information about this and similar content on piano.io This is an existential question for designers: Do businesses take design seriously enough, and designers have given voice in making the strategic decisions they deserve? Or in more colloquial terms - does design really have a place at the table today? As design has grown over the past decade and proven its value to companies, the industry has achieved a much greater status in the business world. Companies such as Airbnb, Nike and Pinterest Time is proud of the design led, with designers in the upper echelons guiding each business. other businesses, recognizing that some of the Most innovative companies intentionally put design first, continue to build their own design teams. At Co.Design earlier this year, Kate Aronowitz of Google Ventures said that many designers take the coveted seat at the table we have long dreamed of. We make key strategic decisions and help shape the direction of companies. We got here because we proved design can solve big problems in a way that others can't. But is the emphasis on design really more than just words and savvy marketing? AIGA's annual design census, which tries to present a portrait of the current state of design, suggests that some designers themselves have their own doubts. One of the many themes of the census highlights the biggest challenges facing design as an industry today. Thirteen thousand designers were surveyed for the census, and the number one critical industry issue they have brought is that design still doesn't have that place at the table. This may be because the design has not been adopted in many business environments, even if it has brought value to the large companies that have adopted it. Design thinking, a love of hate buzzword in the industry, has turned design into a core business practice, but that doesn't mean that its results are really recognized, let alone implemented. Companies can put thousands of employees through Bootcamp's design thinking, but it's hard to say whether this is affecting real long-term change, especially in large, bureaucratic institutions. Co.Design wants to hear from you. Have you ever sat at a table and participated in business decisions? Did you work for a company where design wasn't a priority? What should designers do to ensure that they play a role in shaping the company's strategy? We created a survey so you can tell us how you really feel. You can answer it right here or fill it up above. We will only quote answers in future stories if you give us explicit permission to do so. Any questions? Send CoDTips@fastcompany.com.
