The GMAT exam is a key component of your business school application, and one of the best ways to start preparing for GMAT is to try out some GMAT sample questions. On this page you will see each type of questions that goes into your GMAT Total Score of 200-800 points. You will get the initial feeling of your loved ones. The least liked types of questions tend to be the sufficiency of the data, on the quant section, and reading understanding, on the verbal section, although the grammar involved in the issue of sentencng correction is challenging for some test takers. Just remember that any area of difficulty on the test is an area where you can carve out an advantage. What has to do with your GMAT score and your MBA application is not how easy or difficult the test feels, but how your relative performance is. For this reason, and because everyone has room to improve GMAT, don't try to evaluate yourself based only on these sample questions. If your GMAT ability can be evaluated in just 10 or 12 questions, GMAT will only be 10 or 12 questions long! GMAT Sample Issue: Problem solving works at the same constant speed, 6 identical machines can produce a total of 33 widgets per hour. At this rate, how many widgets can 14 of these machines produce in 3 hours? A) 66 B) 231 C) 462 D) 693 E) 909 As you can see from this sample question, GMAT Problem Solution issues test your skills in the traditional format. They always have five options for answers; one choice is objectively the best, while the rest objectively concede. These questions are most reminiscent of the math questions you've seen on other standardized tests. Problem-solving issues are one of two types of questions in the quantitative section of the test. Here are a few more issues related to problem solving. This is just a piece of the hundreds of free questions available to you on GMAT Free: GMAT Sample Issue: Data Adequacy Over a period, water enters a partially filled reservoir at a constant rate through the mountain stream. At the same time, the water is pumped out of the tank at a constant speed through the pipe socket. At what rate, in gallons per minute, the amount of water in the reservoir increases? (1) The amount of water originally in the reservoir is 1,800 gallons. (2) Water is pumped into the reservoir at 8 gallons per minute and out of the reservoir at a rate of 20 gallons every 3 minutes. A) Statement (1) ALONE is sufficient, but a statement (2) is not sufficient in itself. B) Statement (2) ALONE is sufficient, but a statement (1) is not sufficient in itself. C) Both statements together are sufficient, but NEVER a statement alone is sufficient. D) EACH statement ALONE is enough. (E) Statements (1) and (2) TOGETHER are not sufficient. Questions data are unique to GMAT. Data adequacy is a different type of issue in the GMAT GMAT quant section and it represents the leading test-taker opportunity to gain an advantage over the score of the competition (or suffer from a disadvantage). Data sufficiency questions always have two data statements marked (1) and (2), and the choice of answers is always identical to the choice of answers in these sample questions. The format isn't too complex once you're used to it, but there's plenty of room to test the strategy in this type of issue. A few more questions related to data adequacy: Item on the list of multiples of coefficients and evens of the company Teaching GMAT Sample Issue: The verdict of correctional research along the Solo River in Indonesia led some archaeologists to debunk the idea of an era in which Homous Erect still survived in the then Homo Sapiens' inhabited areas. A) in which Homo Erectus still survived in the areas that were then Homo Sapiens B), in which Homo Erectus still survived in the areas, inhabited by Homo Sapiens C), when Homo Erectus still survived, where there were areas inhabited by Homo Sapiens D), when Homo Erectus still survived in the current areas of Homo Sapiens E), when Homo Erectus still survived in the areas that were then Homo Sapiens' sentencng issues are the shortest in GMAT. Normally, you answer a question about correcting a sentence in less than a minute. Sentence correction questions are mixed with critical questions of reasoning and questions of understanding reading in the verbal section of the exam. As you can see in this question example, the first choice of answer contains a phrase identical to the underlined phrase in the question request. This is always true for these issues. The essence of the correction of the sentence is that you should know and apply the rules of English grammar and principles of style (effective communication). However, the goal is not just to withdraw and/or apply the rules; it's to use critical thinking. Here are further questions of sentencng sample: Keith Fox Farm's minister measures the rubber producers GMAT Example: Critical reasoning recently scientists have determined that great white sharks can live more than 70 years, much longer than previously thought. They made the discovery by studying the layers of different colors that have accumulated on the shark's teeth over the years. In the 1950s, atomic bomb tests produced an unusually large amount of carbon-14 that fell out of the atmosphere into the ocean and accumulated as a distinctive layer on the shark's teeth corresponding to a known period of time. It is puzzling that, although the great white sharks live longer than expected, some parties argue that, based on the new findings, great white sharks should be protected from overfishing. Which of the following, if true, best resolves the discrepancy, revealed above? A) Great white sharks must be protected from overfishing they die quickly from carbon poisoning-14. B) Great white sharks were determined to live longer than previously thought, based on the discovery of a carbon-rich layer in the teeth of old sharks. C) Great white sharks are obviously endangered and therefore need to be protected from overfishing. D) Some great white sharks may have rich layers of carbon-14 from other sources, depending on their migration patterns. E) The longer lifespan of large white sharks means that they mature more slowly and multiply more slowly than previously thought. This question, like all critical reasoning issues, is designed to test logical reasoning skills based on a brief quick, which is usually a logical argument or proposed action plan. Of the types of questions that appear in the Verbal section, a critical justification is a type of medium length, as questions about reading understanding require the entire passage to be digested before taking over the questions. Critical reasoning questions are an important area of practice for the GMAT exam, which is often underestimated. Many people feel for granted that they will have to brush up on math skills, but they think of verbal skills as innate and not subject to improvement. It's not that! As you practice more critical reasoning, you will find your speed and accuracy improving. More critical reasoning questions: Pirating Losses Text Passwords Orcanian Health GMAT Sample Issues: Reading Understanding Understanding is best viewed in a realistic interface with pass and question side by side, so for these practical questions we'll get to know you right inside the GMAT Free Course (no registration required, you can click on through). In order not to hurry, you want to set aside 10 or 15 minutes per pass. In practice, you usually digest a reading passage in about 4 minutes and then spend 1-2 minutes on a question. GMAT Reading Understanding excerpts are often one paragraph, although excerpts from three to four paragraphs are also common. Reading Understanding represents the GMAT test area that is most difficult to improve quickly, since reading skills are acquired throughout life and do not improve overnight. However, improving this type of issue is possible, and many of the techniques that we will cover for critical reasoning can also be applied to reading understanding. What's next Don't despair if these samples are daunting - and, for that matter, don't think you've done your GMAT training if you nailed them. A moderate level of trust is ok if you are serious about applying in a business school. From here, a good next step is to introduce yourself to the GMAT exam. And now that you've seen these GMAT sample questions, we encourage you to register free of charge in the course to have access to it's a question of history. Welcome to our GMAT Sample Questions practice test, complete with answer key and explanations. Keep in mind that this GMAT allows you to choose the order of the test sections, so feel free to start with the section quant or verbal. And for more practice issues of equally high quality, consider signing up for Magoosh GMAT! You can register at the end of this post. You can also view the help we offer through this quick video tour of Magoosh GMAT. Free GMAT Example Magoosh GMAT Case Practice Test Answers and Explanations After completing each section of this GMAT practice test, you will see answers and explanations. The correct choice of answers will appear right on the screen in this post, and there will be a clickable link to the answer explanation page for each question. And once you have taken the test, this thorough answer key will still be available for consideration. This will be one click on our GMAT practice test response page. And I have some particularly good news about these explanations of the answer: you get a text explanation and a video explanation for each question! Consideration of both explanations is particularly useful because text and video explanations often explain the test in two different ways. It's a great way to explore and discover your own best learning style. Adaptability: The key difference between this GMAT hands-on test and the real exam in this Magoosh GMAT sample, an example of GMAT issues that you see, are not adaptive. But on a real test, they are. What is an adaptive GMAT test? In a nutshell, the real GMAT test is adaptive. What does that mean? Well, there's no fixed, predetermined set of questions on the exam itself. Instead, you get a computer adaptive test in which GMAT questions that appear on the test screen will have a different level of difficulty, depending on how you did on previous questions. So if you're good at a few consistent issues, real GMAT then start making your level issues harder. But if you don't work a few questions in a row on the day of testing, the exam will adapt and give you simpler questions. Why we did this test is not adaptive Having a fixed set of questions allows us to give you a combination of questions that reflect the combination of topics the average GMAT test-taker sees on a real exam. In the adaptive GMAT practical test, you can get a disproportionate number of simpler topics, especially if you're just starting GMAT research. How to take an adaptive GMAT hands-on test from Magoosh Flaw, of course, is that this GMAT test sample can't help you predict your GMAT score with accurate accuracy. The actual GMAT score is based on adaptive testing, with more points for complex questions and fewer points for the simpler ones. As you get further into your test preparation and build more skills, you will want to start taking adaptive GMAT practice tests. Magoosh Magoosh The subscription includes adaptive GMAT practice exams as well as additional practical questions with text and video explanations, just like those you saw in this GMAT practice test. You can sign up today, or try out what we offer with a free 1-week trial. How to get a rough assessment of your score based on this non-adaptive GMAT exam the real GMAT score report takes into account the percentage of questions you got right and then slightly adjusts the point of each individual question based on its complexity. Point weight can have a very significant impact on your score. But you can get a very approximate approximate score by calculating the interest on your own. Both the quant and the verbal sections have their own separate subcores. These subcores have a scalable score range from 0 to 60. So if you get, say, 70% of your quant questions right on this test, your very rough calculated subcor for quant will be 70% of the range of 60 tochi (0.7 x 60 and 42). Using your verbal and quantitative percentages, you can also make this kind of imperfect but useful estimate for your entire composite score on this practical GMAT test. How, you ask? Well, Magoosh actually has a chart for that! Finish the GMAT score chart in Sharat's blog post How to calculate GMAT scores. What to expect from this GMAT practice exam This practical GMAT test consists of the bulk of the GMAT exam: quantitative and verbal sections. To learn more about how these sections are marked and how they contribute to your overall score, see our article What is a good GMAT score? With that in mind, let's take a closer look at the quant and verbal sections of GMAT. The quantum part of the GMAT quantitative reasoning practice section has two multiple selections of question formats: Data Adequacy (DS) Problem Solution (PS) Details about the GMAT quant section of DS questions give you mathematical problems and two statements that give you additional information. From there, you should find out if one or both statements offer sufficient data for you to solve the problem. But interestingly, you don't have to actually calculate the solution. Problem-solving issues, on the other hand, require you to solve a mathematical problem at hand (hence the name!). P.S. issues vary greatly, from geometry numbers, word problems, algebraic equations and more. In both PS and DS, expect to use fairly similar skills and knowledge. Since GMAT quant is a non-calculator test, you want to build strong skills in mental math shortcuts and scores. In addition, you should be familiar with all the most common mathematical topics in the quantitative reasoning section: problems with words, properties of integer - arithmetic, interest/odds/fractions, geometry and others. I discuss these topics in more detail in my breakdown of GMAT quant concepts concepts As you prepare, remember that data adequacy is unique and has its own set of strategies; See Mike GMAT's data sufficiency tips. In terms of structure, the GMAT section of the quant has 31 questions. About 13 of them will be data sufficiency, and the rest will be problem-solving. You are given 62 minutes to complete the test, or a maximum of two minutes to question. Since you can't go back and see the issues you've already completed, it makes sense to use as much time as you need. The verbal part of the GMAT test there are three common type of questions in GMAT Verbal: Reading Understanding (RC) Critical Justification (CR) Correction Proposal (SC) More on the GMAT Verbal section Normally, RC passages are 2-4 paragraphs long, but sometimes they can consist of one large item. After each passage, you will answer 3-4 questions about the passage. You will need to correctly identify the facts from the passage, draw conclusions, understand the intentions or attitudes of the author, and so on. CR readings are much shorter. Most CR passages are 100 words or less; all logical arguments follow one question that asks you about logic. Last but of course, not least, SC questions will show you several different versions of the long, academic offering and ask you to choose a version that has the best style of grammar and writing. The skills tested in GMAT Verbal are varied and nuanced. For GMAT Reading Understanding, you need to be adept at active reading skills, and you should also be good at mental paraphrasing, drawing conclusions, and thinking as a writer how you appreciate the author's attitude and intentions. Critical reasoning, on the other hand, practically requires you to think like a lawyer, carefully choosing logical arguments to find flaws or hidden reasoning. SC, like RC, and CR is a plural choice, but is focused on writing skills rather than the ability to read. To prepare for SC, develop a keen sense of formal writing grammar and cultivate a good psychic ear for which phrase twists sound best in your mind. Finally, let's take a look at the structure of the GMAT Verbal section. In terms of breakdown, there are 36 questions in total, all multiple options. About 11 of them will be critical reasoning, about 13 will be a sentencng correction, and the rest will be Reading Understanding. The time frame for this section is 65 minutes. This means a maximum average of 1 minute and 48 seconds per question. As is the case with quant, it's good to take as much as the maximum average as you need, since you can't go back to dealing with previous issues. For Verbal, in particular, the average time per question will vary greatly depending on the type of question. Be sure to read Pete's Breakdown to walk on RC vs. CR vs. SC. Where to Find GMAT Sample Issues for IR and AWA IR and GMAT AWA sections are not included in this test because these are these of the GMAT that scored separately from the rest of the exam is usually not so important on your business school application. If you want some GMAT sample questions for IR, you can check out our GMAT Comprehensive Reasoning Practice post. And for AWA practice, I recommend going straight to the source. The official creators of the test offer a PDF of each GMAT AWA question, which you can see on the day of testing. Official GMAT Practical Tests: Another important resource I have in the team that writes Magoosh GMAT practice issues, and I can tell you that a lot of research goes into making sure they resemble the real thing as close as possible. But in terms of quality, did you know that even better than a carefully researched imitation of the real thing? The real thing! Because of this, I always encourage students to use official GMAT practice tests along with their Magoosh materials. In terms of quality, official GMAT training is simply the best place to take a full practice length test. Preparing GMAT in-store MBA.com includes the most authentic adaptive GMAT practice tests you can take! And their offerings include two full downloadable free GMAT hands-on tests, as well as four additional formal practical tests that cost money. All of these official trial tests are complete tests that include the IR and AWA sections. In addition to the free tests of the old version, the creators of the real GMAT exam offer several other good free resources. I've already told you about their full collection of GMAT AWA questions. But did you know that they also have 8 issue GMAT mini quizzes? This quiz is a powerful quick hit aid study as you start GMAT training, as it covers all the main types of questions in just 8 questions. If you need even more resources, we've covered you. Magoosh students receive 40% of the official GMAT practice exams here. Get discounted official practice materials for GMAC Planning the rest of your GMAT Prep course, there's a lot more to prepare for the day test, then just going through GMAT practice sets or taking the GMAT hands-on test. You also want a good roadmap for training activities. Magoosh lays out quite a few different GMAT study timelines. We have training plans of different lengths that emphasize different learning needs, so there's really something for everyone! Our training plans are designed to be adjustable and changeable, so you can treat them simply as an example of how you could build your own learning schedule.
