It has a simple and easy settings interface, allowing you to quickly configure the application to your needs. The keyboard works very fast thanks to thoughtful optimization. But in fact, Smart Keyboard can do a lot. For example, a user can easily change skin to any other by selecting an extended set from a pre-installed standard or downloading an extended set from Google Play. Unlike competitors in the program implemented a full-fledged Russian localization, which distinguishes it among dozens of other keyboards. In addition to choosing a language, you can find gesture and voice input management, adjust sounds and vibrations in different usage scenarios, and back up data to synchronize between devices. In the extended settings you can choose the style of design, change the look of portrait mode, choose transparency and more. The more the user prints, the better the hints the program will offer. In general, it is a quick and high-quality replacement of the standard Google keyboard, which is deprived of such interesting opportunities in terms of customization. Page 2 Keyboard SwiftKey - a popular application on Android, which becomes an indispensable assistant almost immediately after installation. It can rightly be considered one of the best keyboards for smartphones and tablets, as the program is designed to make sure that a person has to print less without compromising convenience and meaning - it has a feature that predicts words for their insertion with one click. After specifying the language, the application downloads the required files and suggests moving on to the final setting, which is to choose the mode of operation. This is enough, and the first use is definitely worth trying both to understand which of them is more comfortable. The first option on speed is the main - activated automatic error correction and tap on the space substitutes the option that is offered as the most anticipated. When it is turned off, the mechanism of hints ceases to work - the processing of all the text is entirely on the author's conscience, as is the case with conventional keyboards. that the device knows in advance what kind of thought you want to express. The program analyzes the data on inputs to make a list of your words that are more logical to offer to you when creating another message or letter. To improve the quality of prediction, there is integration with social media accounts and mail, as it is within such services that users type most of the texts. On the basis of the collected data, a print map is also built, which will be useful for those who train blind printing or just want to improve the efficiency of the set. A great choice for those who do not want to waste time on monotonous actions. Page 3 Swype Keyboard improves the process of printing text messages on Android devices. Millions of users have already appreciated the convenience of this program, and their number is growing every day. The fact is that the program adjusts to a specific style of writing. The personal language model is a faithful assistant that predicts subsequent words when typing. This increases the convenience of the set. Now you can write words in two languages at the same time. If something goes wrong, then all if you don't want to type a message, you can always use the voice set. Speech recognition technology qualitatively transforms everything said into text, without making a single mistake. The multifunctional Swype Keyboard app will make your everyday life much easier. Especially if you have to enter a lot of information during the day. Page 4 Go Keyboard - android app from developers Go Launcher, which is designed to provide the most comfortable environment when you set texts on smartphones and tablets. The program differs relatively small size of the installation file, minimum requirements for the resources of the system, and of course very impressive functionality. With three simple hints, even the most inexperienced user will be able to activate the basic functionality immediately after launch. After that, you can simply use a standard set, which even then surpasses most custom keyboards. In addition to the classic method of input, there is an analogue of the Stroke Of SlideT, which allows you to significantly speed up the process of recruiting messages thanks to smart algorithms. All this goodness can be viewed in the Personal Settings section of the program menu. In addition to these, you can also change fonts and Set. In input settings, the user can choose a different language, personalize the display of the drop-down keyboard, change the volume of keystrokes and more. The application is no inferior to competitors in functionality and opportunities of fine customization, and in some moments and does surpass them. Their.
