There are dozens of probably hundreds of Android phones on the market today. Some are exclusive to specific carriers, some are available worldwide, but few are at the head of their class. This week we wanted to know which Android phones you thought were the best available, not just because they round up a checklist of features or high-end hardware, but because you think they offer a great overall experience. Here's a look at the top five Android phones, based on your nominations. Earlier this week, we asked you which Android phones you thought were the best. There are many sites willing to tell you which phones are the best based on the chips inside, camera, storage, or Android version preinstalled, but these things don't always add up to a great user experience. We asked you which phones - past or present - you thought were the best, and over 300 nominations later, we came back to set aside the top five. Poll is closed, votes are counted! To find out which of the five contenders below took the top prize based on your votes, head over to our hive five follow-up posts to find out and discuss the winner! Looking for a decent Android phone? Of course, we know that the market will be completely different within read moreSamsung Galaxy NoteOften called phablet because of its included stylus and massive 5.3 Super AMOLED display, Samsung Galaxy Note (ATT, \$299 w/contract) is huge, but many of you praised it for mixing the handheld phone with some desperately needed tablets like real estate. The 8MP and 2MP rear and front cameras and 1.4GHz dual-core processor won't hurt matters either, and while it's definitely not the right size for everyone, those of you who love it and others are looking forward to releasing it on other carriers. Also, even if the Galaxy Note ships with Android 2.3 Gingerbread pre-installed, there are plenty of ROMs available to bring it to the Android 4.0 Ice Cream Sandwich, or simply replace the TouchWiz Samsung interface completely. The HTC One/SThe HTC One Series is HTC's latest attempt to recreate itself, not what the company really needs, most people who have used HTC devices love them, and the HTC One X and One S are no exception to this rule. One X (ATT, \$199 w/contract) is HTC's new flagship phone, sporting a 4.7 screen, a quad-core NVidia Tegra 3 (internationally) or a dual-core qualcomm Snapdragon processor (US/Canada), an Android 4.0 Ice Cream Sandwich (with HTC Sense UI on top), a built-in Beats Audio, and an 8MP rear camera with a 1.3MP rear camera. HTC One S (T-Mobile, \$189 w/contract), on the other hand, slightly less than 4.3 screen, 1.5Ghz dual-core processor, 8MP rear and VGA front cameras, Beats audio, and ice cream sandwich. Both devices are thin, devices designed to bring Android Android Focus on your select group of high-quality HTC devices, rather than a dozen-plus HTC devices released in the past. As long as it works. Samsung Galaxy S/S IIThe Samsung Galaxy S series devices are among the most popular smartphones in the world, and even though Samsung and Apple are embroiled in a patent lawsuit about how similar the Galaxy S is to the iPhone (and vice versa), that hasn't stopped the Galaxy S and Galaxy S II from selling millions of units worldwide. The Galaxy S was one of the first dual-core Android smartphones, and was certainly one of the first to show off the new (at the time) Samsung Super AMOLED display, offering bright and crisp colors even in bright light. It is still available for song depending on the carrier you pick it up from (in the US, it was sold under the name Vibrant (T-Mobile), Captivate (ATT), Fascinate (Verizon Wireless), and Epic (Sprint) in both 3G and 4G variants.) Story aside, The Samsung Galaxy S II is the company's current model and has a 4.3 Super AMOLED display, 1.2GHz dual-core processor, and while it comes with Android 2.3, most carriers have been slowly rolling out updates to bring the device to Android 4.0. Prices vary depending on the carrier and the option you take, but one thing is for sure: when it was launched, most people consider the Galaxy S II the best Android smartphone, if not the best smartphone-available on the market, making a furor about the upcoming Samsung Galaxy S III that much louder. The Motorola The Droid series from Motorola (Motorola Milestone, internationally) series was one of the earliest Android phones on the market to really bring Android to the masses, and is definitely the first Android phone available on Verizon Wireless at the time. It's been a tough call for a group of droids together, but it's worth noting that those of you who have assigned droid lines in large quantities specifically mentioned slider models rather than candy models like Droid Razr, Razr Maxx, or Bionic (although they all got strong nominations as well) - all available on Verizon Wireless in the US. The Motorola Droid 4 (VW, \$199 w/contract) is the current iteration of the phone, featuring a 4 qHD display, 1.2GHz dual-core processor, 8MP rear and 1.3 MP front-facing camera, and, above all, a slide-out backlit keyboard that allows the phone to be used in both portrait and landscape modes without compromising the real estate screen. The Droid line is still one of the few high-end Android devices with a physical keyboard, making it popular for both portability and people who prefer a physical keyboard screen. Droid 4 sports Android gingerbread, and rides Verizon Wireless' 4G network. Samsung Galaxy NexusThe Samsung Galaxy Nexus (VW, Sprint, \$199/w contract, \$399 unlocked) is the current official Google Starting start Android 4.0 Ice Cream Sandwich and currently serves as the flagship Android device. It sports a 4.6Super AMOLED display, curved contour screen, 1.2GHz dual-core processor, and 5MP and 1.3 MP rear and frontal cameras. This is a pure Google experience, i.e. a phone (largely) without viruses and other applications pre-installed by carriers and manufacturers, and in particular missing the Samsung TouchWiz custom layer in favor of a clean version of Ice Cream Sandwich. The phone is also sporting Google's NFC payment system, Google Wallet. The camera boasts zero shutter lag, and it was the first phone to run with Ice Cream Sandwich pre-installed, and it's still one of the few devices that you can get that already is there. If you want to make the most faithful and clean Android experience possible, or want an Android phone that is officially supported by Google, this is it. There you have, five Android phones, based on your nominations. Now it's time to vote for all of the champion. It was hard this week to run down the top five considering there are three Samsung devices in management, but some have received more nominations than some of the other contenders combined, so we can't ignore the fact that many of you have a strong opinion about these particular models. Is there anything to be said for the nominees you missed? Your favorite phone doesn't get enough nominations to be included? Remember that the top five are based on your most popular nominations from calling for applicants to thread from earlier in the week. Share your thoughts in the comments below. Hive Five is based on reader nominations. As with most Hive Five posts, if your favorite stayed away, it's not because we hate it, it's because he didn't get the nominations needed in calling for job applicants to make the top five. We understand that this is a bit of a popularity contest, but if you have a favorite, we want to hear about it. Is there an offer for Hive Five? Email us tips@hivefive@lifelifehack.com!Photo pittaya Srolong. There are three types of photo editors on Android. There are some that are trying to rival desktop photo editors in effect like Adobe Lightroom CC. The second type is an easier editor like Snapseed who does the basics and tries to do the job for you. Finally, we have social media filter photo editors who don't do much but add some fun effects. There are enough of all three of these options to make your head spin, so we've compiled a list of the best photo editors for Android. Please note, none of them have the power, something like Gimp, Lightroom, or Photoshop has. For more serious photo editing, you don't care computer and one of the best photo editors on these platforms as well! Photo Lab Photo EditorPicsArtPhoto Mate R3PixlrSnapseedTouchRetouchVimagePrice: Free / Up to \$52.99 a monthAube has released a plethora of editing tools over the past few Included are some of the best photo editor apps available. Some of the options include Adobe Photoshop Express, Adobe Photoshop Mix and Adobe Lightroom. Each of them has many features to help you do things. You'll be able to do simple things like removing red eyes to edit RAW files taken on your smartphone or DSLR camera. Adobe Lightroom is especially updated quite often with new features. The only potential caveat is that some of them require an Adobe Creative Cloud subscription in order to use all the features. Those who already use Adobe CC should definitely just get them because they are included with a CC subscription anyway. AirBrushPrice: Free/\$3.99 per month/\$19.99 per yearAirBrush is a great option for editing photos of people. It has many people oriented features such as removing pimple, smoothing the skin, removing red eyes, and teeth and eye brighter features. There is also a bokeh mode to turn any photo into one with a blurry background. In addition, the app comes with a separate camera feature that allows you to edit a photo before you take it. So you can get a framed selfie in the camera and then apply edits before you take the final product. There is a subscription to some of the more advanced features, but you get a 7-day free trial to try it out before you spend anything. Enlight PixaloopPrice: Free/\$3.99 per month/\$59.99 onceEnlight Pixaloop is a neat photography app with some pretty cool tricks. It turns static photos into style GIFs with simple swipes and taps. The effect works best with things like water or clouds, but there are many other examples of use as well. Some other features include adding items that haven't been there before, and overlays that can add to the photo atmosphere. It won't get a red eye or crop your photo. However, the ability to add some extra effects is kind of neat. The only real downside is Enlight is super expensive with a \$3.99 per month subscription or a single \$59.99 price tag. However, we appreciate that we can buy the app in full if we want to. Fotor Photo EditorPrice: Free with in-app purchasesFotor is a long time member of this list and there are many blogs and lists that list Fotor as should be able to. We agree. It has a lot more actual editing tools

than most and includes the ability to enhance photos with a single-click tool for your convenience. Some of the other instruments include harvest, turn, brightness, contrast, saturation, exposure, vignettes, shadow, glare, Shade, RGB, and if they don't work, there are over 100 filters for you to choose from. It's definitely worth a try. The only downside is that the app forces you to log in to use it, and it's one of the photo editor's most expensive apps. InShot Photo Editor ProPrice: Free/\$7.99 per yearInshot Photo Editor Pro is a pretty decent editor. Editor. It's a new style editor with tons of things like filters, stickers, and other similar effects. The app houses all these effects in a store-style layout and you can choose the ones you want to download. Of course, some of them are only available on pro subscription so get ready for this. Either way, it's actually editing some photos. You can do things like retouching photos, cut things out of images, and it covers other basics like pruning and the like. We believe that a \$7.99 per year subscription is relatively reasonable as long as you use the app consistently. In addition, the developer has a bunch of other photo and video editor apps in the Play Store.LightX Photo EditorPrice: Free / \$0.99LightX is one of the upcoming photo editor applications. It has had an inspiring success on iOS. There are quite a few decent features as well. It has a background change tool, splash color effects, and a number of slider tools like color balance, levels and curve. You can even combine photos together. There are also blur functions, photo collages, forms of manipulation, and stickers. It's still in beta. This means that there are errors. However, it should end up being in the top five or so photo editors out there. Photo Director Photo EditorPrice: Free/\$2.99 per month/\$17.99PhotoDirector is a new entrant (comparatively speaking) into the photo editing space on Android, and this one is pretty good. Like Fotor, this one focuses a lot more on manual enhancements rather than filters, and you have access to HSL sliders, RGB colored channels, white balance, and more to properly edit photos. There are also sliders for tone, brightness, darkness, exposure and contrast for more in-depth editing. It's more powerful than most, and should be good for those who want something other than filters. Photo Effects ProPrice: FreePhoto Effects Pro is definitely an editor for those who like to play with filters, effects, stickers, and the like. It boasts more than 40 filters and effects as well as the ability to add text, stickers and frames as well. The unusual feature of Photo Effects Pro has the ability to finger paint on a photo to make it something unique that you do. There is a small selection of photo editing tools, but you definitely get this for effects. It's free to download and use, making it great for those on a budget. Photo Lab Photo EditorPrice: Free/\$9.99Photo Lab is not one of the most popular photo editor apps. The app manages to do pretty well, though. It boasts over 640 filters, frames and effects for you to play, making it one of the largest collections available to consumers. Using You can create montages, lightly edit photos, stitch up effects to create some unique photos to share with friends. There is a free version with advertising and watermarks. You can try the free first before buying pro Mate R3Price: Free Trial / \$7.49Photo Mate R3 is the spiritual successor to Photo Mate R2, who was one of the best photo editors on the list. It's still fairly new, so expect it to develop and get better over time. At this point, you'll have access to a pretty strong set of editing tools, including all the basics. It also has native support for RAW files, which is great for photographers. The app also comes with a lens collection, so you can fix lens problems including vignetting, distortion, and chromatic aberration. This is about as pro as it gets on Android. The only downside is that other photo editors get similar features. PicsArtPrice: Free/\$5.99PicsArt has been around for a very long time and has amassed over 250 million downloads to date. Fortunately, the developers have done a decent job of updating the app to keep it up-to-date. You'll find many ordinary things, including light editing tools, as well as filters, text, stickers and collages. It boasts more than 100 editing tools as well as a community of creative people to share things with. It's a strong option with lots of features. There are also many other photo tools PicsArt.PixlrPrice: Free /\$1.99Pixlr by AutoDesk, also known as Pixlr Express, is a powerful photo editor and one that our readers have recommended to us over and over again. It has one of the best one-touch enhancement tools we've seen, and it also includes a ton of other features and tools that you can use. There are also filters, although it deftly masks them as linings, and also includes cosmetic editing tools like blemish removal and teeth whitening. This is one of the best photo editor apps with something for everyone. SnapseedPrice: FreeSnapseed is definitely one of the best photo editor apps. Google bought this a few years ago. The app has grown into a pretty powerful photo editor in this space. It has the support of RAW photography that will delight photographers greatly. You can also customize the image with a variety of sliders and with a single touch to improve the tools. There are also some filters as well if you're into it. It's deceptively lightweight and simple, how powerful it is. The app is also one of the rare free photo editor apps without advertising or in-app purchases. This is the one we recommend first and then Adobe apps and then everything else. However, this app has also not had an update since 2018, so we're not sure if it's there's more to active development. TouchRetouchPrice: \$1.99TouchRetouch is one of the most unique apps for photo editor. It doesn't do the usual things like smooth skin or remove redeye. Instead, it removes other items from the photo. You can do things like remove unsightly power lines from your shot, small objects that you don't want there, and in some cases, you you even remove people. The app either works insanely well or not at all. We don't recommend you expect miracles, but it does a pretty decent job most of the time. It works for a single purchase of \$1.99, so be sure to check it out before the return phase runs out. You can also use it for free with Google Play Pass if you have one. VimagePrice: Free/\$1.99 per month/\$11.99 per year/\$24.99 onceVimage is a new photo editor app with some decent features. It's very similar to the LG V40's cinemagraph feature. You can take photos without moving elements and add moving elements to them. You can do basic editing like brightness, blur, crop, rotate, saturation, and other things. You can then add any of the series of animations made to the photo to give it life. During our testing, I added steam to the food item and drop the flower pedal for a selfie (don't judge). This creates some unique animated photos that you just don't see every day. The app has several subscription options or one purchase price if you don't mind the cost. If we missed any of the best photo editor apps for Android, tell us about them in the comments! You can also click here to check out our latest Android app and game lists! Lists! best photo editor for android phones free download
