This series of video tutorials will give you a look at the new features and enhancements in Pinnacle Studio 20, a video editing software for professional results. Learn how to edit and convert 360 videos, how to adjust track transparency, and more. Enjoy short step-by-step writing guides to the most common video editing tasks. Page 2 Most of the videos are shot in HD - 1080p. But as camera technology evolves, 4K video footage (four times the size and quality of HD) is becoming more common. Although the 4K video editing mechanics are the same as HD video editing, larger files can be more penalized on older computers. 4K video will also give you more options in editing due to the increasing number of details that the camera lifts. If you want to edit a selection of 4K videos, read the guide below to find out the best way to like it. To install Pinnacle Studio video editing software on your computer, download and run the installation file above. Continue to follow the instructions on the screen to complete the customization process. Import 4k videos into a folder in your library. We edit 4k videos like we would every other video. Drag and drop the video on the timeline as you want them to show up. Once your assets are on the timeline, you can view and trim the video clips, spread your media as you want it and more. To open the finishing point, place the Timeline scrubber next to the incision, which will be trimmed, and press the Trim mode button. Click on it again to close the finishing mode. Click Create a Name to open the editor-in-chief. Add text to text settings. Adjust fonts, font sizes, and styles from there. You can also change your look, background settings, and stereoscopic settings. You can also switch to movements to change the textual rationale and flow. You can choose from a wide range of effects by editing the effects. Just select the effect from and it will apply on the media timeline. Go to the Transition In or The Transition Out editor for access to the transitions. When you find the one you want, drag it to one end or the other of the clip timeline. Click Create a Song (Ctrl-7) to open ScoreFilter. In ScoreFilter, select a category, a song, and a version from Provided. Enter the name of the clip in the Name box and adjust its duration with the Duration counter if you wish. When you've made your choice, click Add to the Movie. When you're done editing the project, open the exporter by clicking on the Export tab at the top of the screen. The exporter will use the original higher-resolution files. Because of the larger file size, video rendering can take a little longer. Check out some of the other video editing features available at Pinnacle Studio, such as how to censor videos, how to add video effects, how to add video filters and more! It's easier than ever to create high-quality movies and videos. Take the video to the next level with Pinnacle Studio How to Reverse Video How to Speed Up Video How to Add Video Transitions How to Zoom in on Video Needs to Edit 4k Video? Pinnacle Studios' powerful video editing features allow you to do basic edits and advanced manipulations for your 4k videos.
