Markil Posts: 1 Joined: July 2004 Hello All. A young man who is part of my community is fighting the Hodgkins. It's going well. The outlook is great. While he was out of work, he was contemplating pursuing a hobby and making his career as a mechanic. He's an SS dropout. I encouraged him to get it ged and then maybe continue some technical school for some training. He was already looking into it. My question is - Can any of you offer any group that he can check that can help him with grants or school loans. He is 24 years old, his wife is 22 years old, children 2.3 and 4 years old. I am currently sifting through all the Google search results, which will take days. I was just hoping you'd help with the label. Thank you so much for your help. Without applying more specific criteria, the Network Certificate can cover local wired and wireless IP network design, connectivity, routing and administration, and mobile communication technologies such as LTE and Mobile WiMAX. In addition, this umbrella includes a network of data centers, as well as a network connection (WAN) and quality of service, as well as traditional long-haul technologies such as ethernet operator, optical fiber and so on. This survey whittled the list to basically up to the most popular local wired and wireless certification networks. Several certificates in this article overlap multiprotocol Label Switching (MPLS) and Mobility, but they are exceptions to the rule. The list also includes a combination of neutral suppliers and vendors of specific accounting sponsors, although suppliers are more widely represented. You'll see certificates from well-known technology providers such as Aruba Networks, Cisco, Extreme Networks, HP and Juniper Networks, as well as Juniper Networks BICSI, CompTIA and IPv6 Forum. If you are just starting a career online, we recommend that you continue to have one or more providers of neutral, entry-level credentials such as CompTIA Network, any of the CWNP certificates, and the IPv6 Forum Silver Certified Engineer. These credentials expose you to many different but very valuable networking technologies and products and will be helpful in finding a job online. The only free certification on the list is Hurricane Electric IPv6, which is actually multiple credentials on multiple levels. The program is very well developed and constantly expanding and it looks more than worth the time you will spend time learning for any of the exams. After receiving one or more neutral vendor credentials, consider certificates related to specific vendors that are relevant to your work. For example, if you work for a consulting firm that supports Cisco and HP technologies, you will hold applicable middle- or professional-grade certificates. Training costs for providers of specific certificates are usually higher than supplier-neutral, so be sure to find out if your employer will cover part or all of the training and certification fees. For those just starting a career online, here's a short list of available types of positions and networking jobs: Network Specialist Network Tech Network Administrator Network Manager Network Engineer Network Solutions Architect As you develop your networking career further, you can decide to specialize in one or more areas of networking. At this point, the networking jobs that you'd be applying for might include: Network Security Specialist Cloud Network Architect Network Research and Wireless Network Development Specialist Wireless Infrastructure Engineer and Mobility Solutions Architect VoIP Engineer Telecom Data Center Manager Network Specialist There are also many networking jobs in sales and consulting. So be sure to check out: Network Sales Specialist Network Account Manager Network Manager Network Manager Alcatel-Lucent Certification Alcatel-Lucent Network Routing Specialist (NRS I) Alcatel-Lucent Network Routing Specialist II (NRS II) Is at the level of the foundation certification in the Alcatel-Lucent Routing Certification Service (SRC) program. Identify mid-level network professionals who are experienced with IP and Ethernet technologies. NRS II certification recognizes advanced network/service offerings in IP/MPLS Ethernet technologies. Other SRC certificates include Mobile Routing Professional (MRP), Triple Play Routing Professional (3RP) and Service Routing Architect (SRA). Aruba Network Certification of Aruba Solution solutions (ACSP) I am not an Aruba Certified Mobility Associate (ACMA) Aruba Certified Mobility Professional (ACMP) Created program with seven certificates ranging from Level 1 (basic) to Level 3 (expert). Certificates define technical knowledge and skills, design, deployment, and management in challenging environments. BICSI Certification ITS Technician focused on supporting the Information Technology Systems (ITS Industry). BICSI is a professional association with more than 23,000 members in approximately 100 countries. Its Technician credentials are mid-level certifications targeting those with at least three years of industry experience, as well as familiarity with HEADS associated with ITS in the National Electrical Code (NFPA70) and ANSI/TIA telecommunication standards. The credentials identify professionals who understand and can apply installation information, guide installation teams, test and fix problems at copper and optical fiber installations, evaluate the use of ITS cable installations, make recommendations on codes and standards, and upgrade and upgrade existing infrastructures. Certification Partners Certified in Convergent Network Technology (CCNT) entry-level certification developed by certification partners and the Telecommunications Industry Association (TIA). The target audience includes technical sales, support engineers, network administrators, product managers and engineers. Content focuses on key concepts, skills and basic terms in convergence technologies, including basic telecommunications, core data communications, LANs, broadband and VoIP. Cisco Certification Cisco Certified Entry Network Technician (CCENT) Cisco Certified Design Associate (CCDA) Cisco Certified Network Associate Routing and Switching (CCNA) Cisco Certified Network Associate (CCNA Wireless) Cisco Certified Design Professional (CCDP) Cisco Certified Network Professional Routing and Switching (CCNP) Cisco Certified Network Professional Wireless (CCNP Wireless) Cisco Certified Internet Expert (CCIE) Routing and Switching Cisco Certified Internet Wireless Expert (CCIE Wireless) Cisco has a well known and highly developed certification portfolio. Certificates in this category are aimed at candidates interested in creating a career in wired and wireless networking techniques and technology, network design, or routing and switching technologies. Certification paths range from entry level to expert level. Certificates are designed for network professionals, administrators, support engineers and design engineers. CompTIA Certification CompTIA One of the most popular shared network certificates in the world. Designed for candidates looking for a career as network administrators, technicians or installers, as well as support technicians and cable IT installers. Recognized or or Ministry of Defense, Dell, HP, Ricoh, Sharp and Xerox, and required for membership in the Apple Consultants network. Certified Wireless Network Professional (CWNP) Certified Wireless Technology Specialist (CWTS) Certified Wireless Network Administrator (CWNA) Certified Wireless Design Professional (CWDP) Certified Wireless Analysis Professional (CWAP) Certified Wireless Network Expert (CWNE) Created Certification Program offering a full set of certificates ranging from entry level to professional career certification. Certification is focused on corporate Wi-Fi skills. CWNP also offers Certified Wireless Security Credentials (CWSP) and Instructor (CWNT). Association of Electronics Technicians (ETA) International Certification Certified Network Computer Technician (CNCT) Certified Network Systems Technician (CNST) Wireless Network Technician (WNT) ETA offers over 80 certificates that are targeted at electronics professionals. ETA is accredited by the International Certification Accreditation Council (ICAC). More than 125,000 certificates have been issued. Extreme Network Certification Extreme Networks Certified Specialist (ECS) Extreme Networks Certified Expert (ECE) Enterasys Certified Architect (ECA) Technical Certificates focused on practical practical training. Certification paths range from entry (specialist) to expert and architect. There are several concentrations at the specialist level. Expert designations include network, switch routing, wireless, network security, security information management, BYOD, and ENS. HP ExpertOne Network Certificates HP Accredited Integration Specialist (HP AIS) - HP Network Infrastructure Accredited Solutions Expert (HP ASE) - Network Architect HP Accredited Solutions Expert (HP ASE) - HP Network Infrastructure Accredited Solutions Expert (HP ASE) - Wireless Networks HP Master Executives Accredited Systems Engineer (HP Master ASE) - Implementer Mature Provider's Wireless Networks Of Specific Certificates range from entry-level network credentials to business and medium networks to certification of skills verification needed to implement complex, large-scale network solutions. The target audience includes IT staff of customers, system designers and engineers, as well as call center support engineers. Skills include network design, standards, cloud services, HP OpenFlow, BYOD and more. Hurricane Electric Online Certification Services Hurricane Electric IPv6 Certification Free Online Certification Project that tests skills in basic IPv6 concepts. Certification includes IP address format, reverse DNS, local hosting address, default routing, documentation set-top box, link-lock set-top box, multicast set-top box, tracing, IPv6 server setup, and more. IPv6 IPv6 Forum IPv6 Forum Silver Certified Engineer IPv6 Forum Golden Certified Engineer IPv6 Education Certification Logo Program promotes IPv6 education and helps candidates build skills to promote faster adoption of IPv6. The courses are practical and consist of both instructors under the guidance and practical laboratory instructions. Detailed programs for universities are planned; the future curriculum will include Diamond certification. Juniper Networks Certification Juniper Network Certified Specialist Enterprises Routing and Switching (JNCIS-ENT) Juniper Networks Certified Professional Enterprise Routing and Switching (JNCIP-ENT) Juniper Networks Certified Route and Switch Expert (JNCIE-ENT) Juniper Network Certified Wireless Specialist LAN (JNCIS-WLAN) JNCIS-ENT JNCIP-ENT specific to vendors that relate to the installation and support of LAN/WAN routers and switches in Juniper Networks technology networks. Credential holders have the skills they need to support large corporate environments. The JNCIS-WLAN certification tests knowledge and skills in Juniper Networks wireless LAN systems, including system concepts, technology, configuration, monitoring, troubleshooting, and network planning. Oracle Certification Oracle Certified Expert, Oracle Solaris 10 Network Administrator (OCE) Oracle has a well-overshadowed provider of specific certification programs. OCE is an advanced certification that confirms the technical skills of system administrators working with LANs and Oracle Solaris OS operating system. The credentials were previously certified by Sun Network Administrators (SCNA). Palo Alto Certifications Palo Alto Networks Certified Network Security Engineer (CNSE) holders have the knowledge and technical skills to install, customize, and implement Palo Alto Networks at an advanced engineering level. The credentials are for partners, system engineers, system integrators, support engineers, pre-sale systems engineers, support staff, or anyone using Palo Alto Network technology. The certification exam is tied to the release of .1 of each version of the Palo Alto Networks operating system, such as v5.1. Riverbed ProfessionalServices (RPS) Certificates Riverbed Certified Solutions Associate - Management Performance Network (RCSA-NPM) Riverbed Certified Solutions Professional - Network Performance Management (RCSP-NPM) Provider of specific credentials that recognize knowledge and skills with The Riverbed Cascade Product Kit (RCSA-NPM) and Riverbed Network Performance Management - NPM Products (NPM-NPM). Account seekers must have advanced knowledge, training and practical experience in deployment, troubleshooting, and maintaining Riverbed technology in small and large environments. SolarWinds Certification SolarWinds Certified Professional (SCP) Credentials Checks network management, network management planning, network management operations, network malfunctioning, performance, and Orion NPM administration. SCP is an accredited certification. Wireshark Certification Wireshark Certified Network Analyst (WCNA) Supplier specific credentials to professionals who use Wireshark to analyze network traffic and then use the information to troubleshoot, optimize and secure networks. Wireshark is considered a de facto standard industry open source product for network protocol analysis, with more than 500,000 downloads per month. The WCNA exam was certified by the U.S. Army in 2009 and covers Wireshark, TCP/IP network communications, network troubleshooting, and network security. Security.
