Built for business but comfortable enough for everyone, the Lenovo 12.5-inch ThinkPad X250 offers a full HD display, fast keyboard, epic lifespan And a full set of ports in a sturdy chassis you can take anywhere. You Are You Find laptops that are a little thinner or lighter, but Lenovo's long-term ultraportable (\$1,407 as a test, \$755 to start) is great for serious work, and allows you to leave the keys and power of a brick at home. The DesignThe ThinkPad X250 features a lenovo simple but stylish ThinkPad aesthetic, with a raven-black cover, deck, side and bottom. The red TrackPoint pointing stick and silver ThinkPad logos on the deck and cover provide a splash of color. At 12.03 x 8.21 x 0.8 inches, the Lenovo 12-inch ultraportable isn't the thinnest laptop on the market, but its girth allows it to provide a strong battery life and all you ports need is worth a compromise. During my testing, the X250 slipped in my bag easily and felt very comfortable in my hand as I carried it around the office. Amazon Prime Day Deals: See all the best deals right now! Lenovo has posted a starting weight for the X250 is 2.88 pounds, but the touchscreen has added a few extra ounces to our test configuration, which clocked in 3.2 pounds with the default battery and 3.66 pounds with an extended unit. The EliteBook Folio 1020 (2.68 pounds) and MacBook (2.03 pounds) are a little lighter, but the latitude of the E7250 (3.4 pounds) is a little heavier. The ThinkPad X250 offers a better typing experience than most laptops on the market. Longevity and securityLike other ThinkPads, the X250 is designed to withstand some punishment. Its carbon fiber-enhanced plastic cover and fiberglass-enhanced plastic bottom allow it to pass 11 MIL-SPEC durability tests, including extreme temperatures, pressure, vibrations and dust. Large companies will appreciate the security features of the laptop. Lenovo's 12-inch ultraportable comes standard with fingerprint scanner for biometric logins. Two of its storage options, the 180GB SSD and 256GB SSD, are Opal 2.0 compatible, which means they can hardware encryption themselves. The KeyboardThe ThinkPad X250 offers a better typing experience than most laptops on the market, with a good tactile feel and a slightly curved key shape. Because of the quick feedback, I typed 95 words per minute on the 10fastfingers.com, which is my typical speed. The keys have a solid 1.8mm journey and require 56 grams of force activation, which is excellent. However, the 14-inch ThinkPad T450s keyboard is even faster, providing 1.9mm travel and 63 grams of power activation. The keyboard is both spill resistant and backlit, so you can see your keys well enough to not drop soda on them in the dark, but you won't break your computer if you do it anyway. Both backlight settings are more than bright enough to view in low light. TrackPoint and TouchpadLike Other ThinkPads, ThinkPad X250 offers TrackPoint pointing stick and traditional touchpad. Although it's not for everyone, I prefer TrackPoint because it provides extremely accurate navigation and allows me to keep my my on the home row. While some business laptops from Dell, HP and Toshiba also have pointing sticks, competitors' nous is simply not as comfortable and accurate as Lenovo's TrackPoints. X250's TrackPoint has its own trio of mouse buttons, which is a big improvement over the X240, which built these buttons at the top of the touchpad. The 3.4 x 2.1-inch buttonless touchpad provides accurate navigation around the desktop, with no hint of jitter. He accurately registered several multitouch gestures, including a pinch to the zoom, two fingers to turn, three thumbs of swipes to change between the photos in the gallery and four thumb napkins to show the task menu. Windows 8 gestures, such as swipes on the right for the Charms menu, have also worked consistently. MORE: Laptop Buying GuideDisplay and AudioThe ThinkPad X250 has four different screen options: 1366 x 768; 1366 x 768 with IPS; 1920 x 1080 nontouch (also IPS); and 1920 x 1080 with a touch, but less brightness. Our review unit 1920 x 1080 IPS touchscreen offered sharp images and lots of screen real estate, but boring colors and medium viewing angles. According to our color, the X250 screen can only display 64.3 percent of colors in the sRGB range, well below the ultraportable laptop average (78.7 percent), the 12-inch Apple MacBook (102 percent) and the HP Elite Folio 1020 (95 percent). When I watched the trailer for Avengers: Age of Ultron, the red in Iron Man's armor and the blue in Ultron's eyes seemed flat and lifeless. Lenovo's own ThinkPad T450s covers 100.8 percent of the sRGB range on the touchscreen. The ThinkPad X250 has some of the best endurance on the market, provided you opt for an extended, six-cell battery. However, the X250 display is quite bright. Measuring 387 nits on our light meter, it is well above the average category (272) and even slightly higher than the MacBook (353) and Dell Latitude E7250 (360). However, the light continued to bounce off the screen in the solar room, and even when not in direct light, the colors disappeared when I moved further than 45 degrees left or right. Netach 1920 x 1080 display, which costs \$200 less, probably fare better. The touchscreen was very responsive to all my taps and gestures. It also supports 10-point interactions as I was able to draw in Windows Paint with all my fingers at once. The speakers of the laptop were loud enough to fill the office, but I didn't like listening to music on them. When I played bass-heavy Forget Me Nuts, drum-laden Uptown Funk and guitar-centric Holy Diver, the sound was tin, flat and utterly unpleasant. The included Dolby Digital Plus software allowed me to choose from different sound profiles, such as movies or music. Included by default, it some depth to the audio as the music sounded even worse when I turned off Dolby. Ports and webcamThe ThinkPad X250 has ports that will be required by the employee on the go. The right side of the home headphone jack, USB 3.0 port, Ethernet and 4-in-1 card reader, is something you don't get on the ThinkPad X1 carbon. Left side hosts powerport, VGA out, mini DisplayPort and second USB 3.0 connector. A 720p webcam captured detailed, colorful images of my face. However, when I photographed in the dim light of my living room, the image appeared a little washed out. PerformanceWith its 2.3GHz Intel Core i5-5300U processor, 8GB of RAM and 180GB of SSD, our ThinkPad X250 configuration has provided great performance for performance and multitasking. The laptop scored a solid 5,259 on The Geekbench 3, a synthetic benchmark that measures overall performance. It's conveniently above average (4,253), Core i5-5300U powered Dell Latitude E7250 (4,866), Core M-5Y71 powered by HP EliteBook Folio 1020 (3,814) and Core M-5Y31 powered MacBook (4,631). ThinkPad X1 Carbon, which was also configured with the Core i5-5300U processor, scored a little more (6110). The X250's 180GB Intel SSD is much faster than the hard drive, but slower than many other hard-to-drive drives. It took the laptop a modest 47 seconds to complete the laptop file transfer test, which involves copying 4.97GB of mixed media files. This is 108.3 IBP, well below the category average (183.5 IBP), MacBook (254.5 IBP) and Folio 1020 (182 IBP). It took the X250 a reasonable 5 minutes and 7 seconds to complete our Macro table test, which matches 20,000 names with their addresses in OpenOffice Calc. This time is 60 percent faster than the category average (8:33) and comfortably ahead of the Folio 1020 (6:36), but slightly slower than the MacBook (4:33), Latitude E7250 (4:42) and X1 Carbon (4:47). GraphicsYou can play video, edit photos or make casual games with the Intel HD Graphics 5500 X2500 chip, and even play some basic low-resolution games. When we lit up World of Warcraft with a resolution of 1366 x 768 with automatic detection settings, the game was played at a smooth 42 frames per second. However, this rate decreased to non-robberable 26 fps at 1,920 x 1080. Both are roughly the same as the category average (37/27 fps) and slightly ahead of the Dell Latitude E7250 (32/24 fps). The ultra-exportable Lenovo scored a solid 50906 on the 3DMark Ice Storm Unlimited, a synthetic benchmark that measures graphics performance. This is comfortably higher than the average for the category (50,906) and the Folio 1020 (33,802). We recommend customizing the X250 with a no-touch 1,920 x 1080 display, a \$130 option. The HeatThe ThinkPad X250 remained relatively cool throughout our tests, although the bottom became a little warm during the extended video playback. After 15 minutes of streaming, the touchpad measured 84.5 Fahrenheit, while the keyboard clocked at 88.5 degrees, as much lower A 95-degree comfort threshold. However, the bottom was much warmer than 102 degrees. The LifeThe ThinkPad X250 battery has some of the best endurance on the market, provided you opt for an extended battery of six items. With a larger battery on board, the ultraportable Lenovo lasted 15 hours and 12 minutes on a test battery laptop that includes continuous surfing over Wi-Fi at 100 nits of brightness. This is almost double the category average (8:04) and well ahead of the MacBook (8:43), the E7250 latitude (9:18), the Elitebook Folio 1020 (6:49) and the Lenovo's own X1 Carbon (8:00). MORE: The 10 laptops with the longest LifeHowever battery, with a three-cell battery, the ThinkPad X250 lasted below average 7 hours and 39 minutes. The ThinkPad T450s, which uses the same batteries, lasted almost identical to the 7:31 and 15:26 with its three- and six-cell units, respectively. Since touchscreens use significantly more power than conventional displays, the net-ax version of the X250 will no doubt last longer with any battery. No matter which battery you choose, the X250 lets you change it without even turning off your computer, thanks to a second, three-cell battery that runs down after the outside unit. Lenovo calls this power bridge technology, and it's also available on the 14-inch ThinkPad T450s.Configuration OptionsIns reconfiguration Lenovo ThinkPad X250 has MSRP \$1407. For this price, you get a laptop with a touchscreen of 1,920 x 1080, a Core i5-5200U processor, 8GB of RAM, an SSD 180GB and an extended battery. The basic model costs just \$755, but comes with a 1,366 x 768 netach display, a Core i3-5010U processor, 4GB of RAM and a 500GB hard drive. You can customize the X250 with processors up to the Core i7, various hard drives and SSDs, Windows 8.1 or 7, and 1366 x 768 or 1920 x 1080 display in contact or no touch variety. You can also choose between a conventional and extended battery that costs just \$5 more but doubles the stamina. We recommend customizing the X250 with a neta 1920 x 1080 display, a \$130 option, because the touch version adds weight, sucks more energy and costs \$330. Choosing an extended battery adds 0.4 pounds in weight, but it's not the brain. The software and warranty of Lenovo is preloaded thinkPad X250 with several useful utilities and a minimum number of viruses. Lenovo Settings is a state-of-the-art custom app that lets you customize your touchpad, power plan, webcam, audio, and other features. The Fingerprint Manager Pro sets up a fingerprint scanner so you can use the numbers, not the password to log in to Windows. Lenovo Solution Center performs hardware scanning and helps keep drivers up to date. Lenovo Reachit helps you manage data on multiple devices and platforms cloud storage. Shareit syncs files directly between phones, tablets and PCs.Like almost every laptop, the X250 comes with a free fee we could do without. The Pokki Start menu looks like a replacement for the Start menu for Windows 8.1, but it doesn't really replace the Start button. However, this points you to the Pokki app store. Users who want a replacement Start menu can download free, such as Classic Shell, which is not trying to sell you apps. There's also a free trial of McAfee LiveSafe security software. However, you can just as easily download free security software or other trial on your own. Lenovo supports the ThinkPad X250 with a standard annual warranty for parts and manpower. You can extend the warranty to four years or add additional services such as accidental damage protection and on-site maintenance at prices from \$39 to \$320.Bottom LineIf you are looking for an unstopped business ultraportable with a focus on performance, the ThinkPad X250 is an excellent choice. With more than 15 hours of battery life (using a six-cell battery), a quick input experience, a high-end display and full-size Ethernet and SD Card readers on board, this 12.5-inch laptop lets you work on the go with confidence. If you're willing to carry a larger laptop and want an even better keyboard and screen, the Lenovo 14-inch T450s is worth considering. However, if you want a laptop that is small enough to fit on the tightest desk tray, powerful enough to use for critical work and long enough to make it through international flight, the ThinkPad X250 is the best lenovo x250 specifications pdf. lenovo thinkpad x250 specifications. lenovo x250 laptop specifications. lenovo x250 ram specifications. lenovo x250 technical specifications. lenovo x250 detailed specifications. lenovo thinkpad x250 technical specifications
