Harvest, adjust color and tone, and apply presets to photos using Adobe Photoshop Lightroom on your mobile device anywhere you find yourself. Observa'o: Synchronization with Lightroom on desktop and online requires Lightroom trial or paid Adobe Creative Cloud membership. Screenshots in this tutorial show Lightroom on the iPhone. The user interface can vary between iPhone, iPad and Android devices. Lightroom's editing mode on a mobile device provides a complete set of tools to improve your photos. Click to open a photo from the library or from the album and choose the editing mode: Harvest and straighten the photos to improve their composition. Tap Crop and select a fixed side ratio from the menu, or drag the handles to use the custom ratio. You can also use the rotated dial to straighten the image. Click on the tick to accept the change. Use presets to apply a unique look or filter effect to your photos. Select presets from the adjustment menu. Choose one of the Preset categories, such as Creative, Color, or B'W, and then select the preset. Click on the tick to apply preset. Usually you want to improve the light on the photo. Tap the light and then adjust the exposure and contrast sliders to make your photos pop. Increase the glare and darken the shadows to create more contrast in the bright and dark parts of the image. If the color in the photo does not reflect the brightness of the original scene, press the color and adjust the temperature slider to create a warmer or cooler image. Use the Saturation slider to increase or reduce the intensity of the colors in the photo. Be careful not to oversaturate your image - colors can easily become too intense. An alternative is to use the Vibrance slider to focus on increasing the intensity of the more muted colors in the photo. Photos contain a lot of details that are worth raising. Tap the effects and then experiment with a clarity slider to add (or remove) the contrast from the middle of your photo. Often this reveals details in the textures of your image. The Vignette slider darkens or eases the edges of your photo. Slide it to the left to darken the edges and put a subtle emphasis on the theme in the center of the photo. Photo editing is an experimental process. To undo the changes you've made to the image, click the undoing icon. Tap and hold to reveal the redo icon. To completely reset the image to its original state, click Reset at the end of the adjustment menu. Click and hold in front of the icon to compare the before and after version of the photo while editing. Anytime you want to stop and sync your edits, you can touch the cloud icon. All the edits you make in Lightroom on your mobile device are reflected in Lightroom on your desktop and online. Any changes made to the desktop or web version are also synchronized with the mobile version. After applying pre-installed in the adobe Photoshop Lightroom cc app, but you you confirmed his address. Using their high quality freebies, bundles, fonts, graphics, layout windows, clip art, crafts and many other design resources!
