Today we want to introduce you to the SCISHION V88 review. The SCISHION V88 is one of the cheapest TV boxes on the market equipped with soc rockchip RK3229. In this review we want to give you the features and impressions of using the SCISHION V88 TV Box and answer questions: how the V88 TV Box works in normal use, which copes with video playback at 4K, and that we stumbled upon some problems. Together, we follow the standard phases of our review. We invite you to read. I would like to say thank you to Chinavasion for sending us a SCISHION V88 for review. Now the SCISHION V88 Android TV Box is available at Chinavasion store for \$19.99 (18.85€), nice!. You will agree with us that the price is really very, very attractive. Advertising SCISHION V88 TV Box specifications: CPU - Rockchip RK3229 quad core ARM Cortex A7 processor @ 1.5GHzGPU - ARM Mali-400MPMemory - 1GB DDR3Storage - 8GB NAND flash + SD card slot up to 16GBVideo Output - HDMI 2.0 up to 4K2K @ 60 fps, and 3.5mm AV output (composite)Audio output - HDMI, AV and coaxial S/PDIFConnectivity - 100 Mbps Ethernet, 802.11 b/g/n WiFiUSB - 4x USB 2.0 host portsInterfaces - HDMI port, RJ45 port, SPDIF port, 4x USB host, SD card slot, AV Out, DC jack. Power supply - 5V/2ADimensions - 11.60 x 11.60 x 2.50 cmWeight - 145 gWhat we find in the box? The box included everything you need to get started:SCISHION V88 Android TV BoxHDMI cable Power adapter 5V/2A (EU)Remote control (without AAA batteries)User ManualSkriSHION V88 TV Box and Acces (Click to Enlarge)The following video from our YouTube channel where you can take a look at more SCISHION V88 TV Box and bundled accessories. First impressions, settings, overview of featuresSEMØNSEN V88 TV Box is well and solidly made of good quality plastic in black. Top housing is a matte, while the sides of the unit are shiny. As we wrote at the beginning of his heart is Rockchip RK3229 quad core ARM Cortex A7 processor @ 1.5 GHz, which supports video decoding 4K2K 10-bit H.265 @ 60 fps (Up to 200 Mbps), 4K 10-bit H... 264 @30 fps (Up to 250 Mbps) and 4K 8-bit VP9 @30 fps (Up to 200 Mbps), 1080p H.264 and VP8 video codes and HD Audio (7.1CH) passthrough. The device runs on Android 5.1 KitKat. The front panel has IR receiver and power LED. On the one hand, there are three USB 2.0 ports and SD card slots. On the rear panel are: another USB 2.0 port, Optical S/PDIF port, AV port, HDMI 2.0 port, RJ45 Ethernet port and 5V/2A DC connector. Click to enlargeClick to EnlargeClick to EnlargeClick to enlargeSEKISHION V88 has hot air discharge holes. Below also remote control. Click to EnlargeBooting Android for start screen takes about 00:42:08 seconds. The start screen launcher V88 looks very simple and is easy to use. Click to enlargeFover remote I used a standard keyboard and mouse, VENZ air must with keyboard. Unfortunately I could not use my favorite Xiaomi gamepad because the SCISHION V88 does not have bluetooth. But for testing, I bought on Geekbuying Gamepad GameSir G3s, which has a wireless receiver for TV boxes without bluetooth. The gamepad also has bluetooth, USB cables to connect via wire and smartphone holder. GameSir G3s supports iOS, Android, Windows and PS3. Gamepad works great! Launcher includes icons of different sizes that enable the most important features, such as: Online Video, My Recommendation, My Apps, Local, Music, Settings. Below you can access favorite programs simply use + and add your favorite program. As you can see in the image added by default CHIPTRIP MC (based on Kodi 16.1) app and Music app. The device worked in the resolution of FHD 1920x1080 (1080p 60Hz), but you can also set the automatic mode. The A95X TV Box also has DLNA and Miracast I had no problem with ethernet and WiFi connection to my router and to the internet. Below screenshot from SPEEDTEST. The remote control and VENZ VZ-RK-1 work smoothly. Remote control looks and works fine and also well in the hand. Everything worked out stable, but the TV Box with 2GB of RAM probably worked faster. In the specification, you can see that the V88 has 8GB of internal memory, but the total space is 5.56GB. Big plus, Netflix works smoothly. Below other screenshots. V88 TV Box we received with the installed program CHIPTRIP MC (based on Kodi 16.1). To test also installed Kodi 16.1 Jarvis from Google Play. On the SCISHION V88 you can play in simple games, just connect the gamepad with wireless receiver (because the TV box does not have a bluetooth), or air mouse (we used VENZ VZ-RK-1) and keyboard. Gamepad GameSir G3s works with TV Box without any problems. You can easily play in Beach Buggy Racing. Very nice to play in Fruit Ninja via VENZ VZ-RK-1. Operating system and components SCISHION V88 TV Box runs on Android 5.1 Lollipop, namely version 5.1.1 and Linux Kernel version 3.10.0. Received device has firmware build number rk322x_box-userdebug 5.1.1 LMY49F eng.wanghy.20160708.153240 test keys. TV Box is equipped with a SoC Rockchip RK3229 quad core ARM Cortex A7 processor @1.5GHz processor and GPU ARM Mali-400MP2. CPU speed between 408 MHz and 1.5GHz. On the following screens you can see exactly the components used and their specifications (information taken from the CPU-Z app). Click to enlarge After using DRM info (app) we know that V88 TV Box is not supported Google Widevine Moudlar DRM, Microsoft Playready DRM, Marlin DRM and Verimatrix VCAS. Click to enlargePerformance testing and benchmarksFor testing I use The AnTuTu Video Tester 3.0 app and AnTuTu Benchmark 6.1.4. The result 633. Nexbox A95X (result 906) HiMedia Q5Pro (result 952), Q-BOX (result923), HiMedia Q10 930), NEXBOX N9 (result 544), Z68 TV Box (result 442), MemoBox MX MAX (result 913), MXV+ (result903), PROBOX2 Z (result 910), MX Plus (result 892). Other MRX (result 906), T95 (result 906), Minix Neo U1 (result 899), K1 Plus TV Box (result 886) and Beelink Mini MX (result 920). Unfortunately the V88 compared to the previous TV boxes worst managed test video as they watch as many as 7 failed plays, video samples. Detailed information below. Video playback of CHIPTRIP MC and Kodi 16.1 Jarvis does not run smoothly. In fact, tests video of antutu, gave reflected in the test video samples. Video examples from MX Player to work properly. The SCISHION V88 easily seems playing movies with the resolution of 480p, 720p and 1080p (24fps, 30fps, 60fps) with various codecs video such as H.264,H.265, MPEG2, MPEG4, RMVB and audio - DTS and AC3. Dolby Digital 5.1 passthrough worked fine via HDMI. Also I tested several video formats - AVI, MKV, MP4 (typical formats where it holds most movies) also videos were played fine. However, the V88 can't handle 4K playback, playback wasn't smooth. The following video sample table tested for Kodi. TV Box Also does well with playing the video on YouTube. Videos play at 720p. Typical 1080pKODIMPEG2 / MP2 2.0 - 6.6MbpsOKMPEG4 / MP3 2.0 - 7.6MbpsOKH264 / AAC 2.0 - 7.2MbpsOKVC1 / WMA3 2.0 - 25MbpsOKVP8 / VORBIS 2.0 - 7.8MbpsOK - 4K VideoSintel - H264 / AAC 2.0 - 24fpsNot smoothBBB Sunflower -H264 - 60fpsNot smoothHoney Bees - 96fpsOKSkyfall - H264 / AAC 2.0 - 10MbpsOKPuppies Bath - h264/AAC 2.0OKCinemartin H265/HEVCNot smoothTears of steel - 60fpsNot smoothHD Club Chimei - H264 / AAC 2.0 - 60MbpsNot smoothJellyfish 4k uhd HEVC 10bit - 140MbpsNot smoothJellyfish 4k uhd HEVC 10bit - 200/250/300/400MbpsBlack screenLG Demo - Istanbul 3840x2160 MP4H264 8bit - 116MbpsNot smoothSony 4K - Camp HDR MP4/HEVC 10bit - 75.8MbpsNot smoothDemo Samsung 2014 - USA Road Trip TS/HEVC 10bit - 51.4MbpsNot smoothDemo Samsung 2014 TS/HEVC 10bit - 51.4MbpsNot smoothH.265/VP9 VideoTears of steel - H265-HVEC / AAC 2.0 - 15MbpsNot smoothYoutube - VP9 / 720pOKSCISHION V88 BenchmarksThe SCISHION V88 scored 20985 (NEXBOX A95X - 36588, Q5 Pro - 41942, Q10 Pro - 38133, N9 - 21336, Z68 - 27053, MX MAX - 35024, MXV+ - 34208, PROBOX2 Z - 35996, MX Plus - 35808, MRX- 35466, Sunvell T95 - 28731, MINIX Neo U1 - 37564, Beelink Mini MX -34123, K1 Plus - 29252, PROBOX2 EX+ - 34332, ZIDOO X6 Pro - 30158) at AnTu BenchmarkTu v6.1.4. Below screenshots. SCISHION V88 scored 1946 (NEXBOX A95X - 4153, VENZ V10 - 4246, Sunvell Q-BOX - 4335, NEXBOX N9 - 2203, Z68 - 3319, MX Max - 4349, MXV+ - 4218, PROBOX 2 Z - 4333, MX T95 - 4300, MINIX Neo U1 - 4326, Beelink Mini MX - 4282, K1 PLUS - 4299, PROBOX2 EX+ - 5834, ZIDOO X6 Pro - 4431) on Ice Storm Extreme. 2922 scored on Ice Storm Unlimited. Below the screen with the results in Vellamo and GPUbench. V88 TV Box has the internal memory benchmarks: Read 50.47MB/s - Type 5.95MB/s. RAM copy speed was 1366.75MB/s. Conclusions SCISHION V88 is a TV box equipped with a Rockchip RK3229 processor. Typically plays video content at 1080p and performs well with the 4K video (also with 60fps) of the MX Player. Unfortunately, 4K video playback via Kodi doesn't work smoothly. Device firmware needs to be updated (optimization, fix minor errors, video playback via kodi). The SCISHION V88 has a simple and easy-to-use user interface that provides quick and intuitive access to important features. V88 has potential but needs support firmware. Unfortunately, the SCISHION V88 does not have bluetooth, so if you want to play games you need to buy a gamepad with USB wireless receiver. The device has 4 USB ports (big PLUS) easily connect accessories without using a USB hub. The main advantage of the SCISHION V88 is its price - \$19.99. Therefore, if you have a very limited budget and don't want to pay for the TV Box, which will be used occasionally, the V88 TV Box is for you. In addition, you need to be patient because we currently have no information about a new firmware update. However, if you hesitate or would like to buy a better TV Box, but also at an attractive price, we recommend you to invest an extra \$19 and buy TV Box, for example with amlogic S905 nad better performing 4K video and have frequent firmware updates. We encourage you to read our reviews, I'm sure everyone will find something for themselves. Once again I would like to say thank you to chinavasion store for sending us a SCISHION V88 sample. V88 test.
