10 tablets with a coating of 180 mg. Indications: allergic rhinitis and hives. Dosage: once a day. Effect within 24 hours. Fast action on: sneezing, runny nose and itchy nose, eyes, throat and skin. Check out the animated flyer pack Check animated bull Allegra D tablet shown to relieve symptoms associated with congestive upper respiratory tract processes such as sneezing, runny nose, itchy nose and eyes and nasal obstruction common with allergic rhinitis. Dosage Tablets should be taken with liquid, orally. The recommended dose in adults and children over 12 years of age is 1 tablet, twice a day, avoiding taking along with foods high in fat. For people with reduced kidney function, the initial dose of 1 pill is recommended once a day. Side effects Of all adverse events that can occur when using Allegra D are headache, drowsiness, dizziness and nausea. In addition, the presence of pseudoephedrine in the drug may cause nervousness, excitability, agitation, dizziness, weakness, insomnia, loss of hunger, nausea or dry mouth. Allegra D is not suitable for people with known hypersensitivity to any component of the formula. In addition, pseudoephedrine is not suitable for people with severe hypertension, severe coronary heart disease, heart failure, people treated with monoamine oxidase inhibitors, or for 14 days after stopping such treatment, in people with glaucoma, prostate hypertrophy, hyperthyroidism or diabetes. This medicine is not suitable for children under the age of 12. For children under the age of 12 there is a children's Allegra in syrup. Warnings and precautions can produce stimulation of the central nervous system with cramps or cardiovascular collapse. Pseudoephedrine should be used with caution in cases of diabetes, high blood pressure, coronary heart disease, high intraocular pressure, hyperthyroidism, prostate hypertrophy, kidney disease and hyperreactivity to ephedrine. This medication should not be used in pregnant or lactating women. Action Mechanism Allegra D represents the 1600th layer of the tablet with a coating. One of these layers consists of a wax matrix that has hydrochloride inside the pseudoephedrine, which is released slowly. Since this matrix is insoluble, it is possible that it is completely released into the feces, although its contents have been completely absorbed. The other layer consists of fexofenadine hydrochloride, formulated for immediate release. Overdose In cases of overdose may occur dizziness, drowsiness and dry mouth. In high doses, the pseudoephedrine class can cause increased dizziness, headache, nausea, vomiting, sweat, dryness, tachycardia, heart pain, palpitations, hypertension, difficulty urinating, muscle weakness and tension, anxiety, agitation, indentation, illusion and hallucinations. Some may develop arrhythmia, circulatory collapse, convulsions, coma and respiratory failure. In the case of an overdose, standard measures are recommended to remove the non-absorbing drug from the body. Composition Each tablet contains: Fexofenadine hydrochloride in imediata 60 mg Pseudoephedrine release formulation in release formulation prolongada 120 mg Excipients q.s.p 1 tablets (Excipients: microcrystal cellulose, corn starch, sodium croscare, magnesium stearat, carnauba wax, stenoïd acid, colloidal acid, One of the side effects is drowsiness, so some people may feel drowsy during treatment. What to do when I forget to use this medicine? If the dose is forgotten, it should be given as soon as possible. However, if you are close to the next dose time, you should wait for this time, always respecting the interval determined by the dosage. Two doses should never be given at the same time. LamathioSaofi-SAC 0800-703 00 14 Legal statements: MS 1.1300.0262 Farms. Resp.: Antonia A. Oliveira - CRF-SP 5.854 Home / Allegra D 24 Hours OF GOLD This medicine is designed to relieve symptoms associated with seasonal allergic rhinitis in adults and children over 12 years of age. Symptoms effectively treated include sneezing, rhinorea (runny nose, itchy nose/palate/sky and/or throat, itching/rupture/ocular hyperemia (increased amount of circulating blood in the eyes) and nasal congestion. Allegra® D 24 hours is also indicated for temporary relief of nasal congestion (nose clogging) due to colds in patients with allergic rhinitis. How does The Allegra D work for 24 hours? Allegra® D 24-hour long-release oral tablet contains 180 mg of fexofenadine hydrochloride for immediate release and 240 mg of pseudoephedrine hydrochloride for long-term release. Fexofenadine hydrochloride is an antihistamine (a class of drugs used to relieve symptoms of allergic manifestations). Pseudoephedrine hydrochloride has a decongestant effect on the nasal mucosa. Pseudoephedrine hydrochloride is considered an effective means to relieve nasal congestion due to allergic rhinitis. Take tablets with liquid, orally, whole and without violation. Avoid the introduction of Allegra® D 24 hours along with foods high in fat. Allegra D 24 hours Use in adults and children over 12 years One tablet per day is given before meals. There are no studies of the impact of Allegra® D 24 hours in charge of discouraged routes. Therefore, to ensure the safety and effectiveness of this drug, the reception should only be oral, as recommended by the doctor. Special populations of Allegra® D 24 hours is not recommended in patients with renal failure. The safety and efficacy of Allegra® D 24 hours in children under the age of 12 is not established. In addition, doses of individual components of Allegra® D 24 hours exceed the individual doses recommended for children under 12 years of age. Allegra® D 24 hours is not recommended for children under the age of 12. It is not necessary to adjust doses in patients with reduced liver function and in elderly patients. What if I forgot to use the Allegra D 24 hours? If you forget administering the dose, administer it as soon as possible. However, if you are close to the next dose time, wait for this time, always respecting the dosing interval. Two doses should never be given at the same time. Allegra® D 24 hours should not be used in case you knew hypersensitivity (allergy or intolerance) to fexofenadine, pseudoephedrine or any component of the formula. Due to the presence of pseudoephedrine, Allegra® D 24 hours should not be used if you have an angle of closed glaucoma (increased intraocular pressure) or urine retention (failure of the bladder to empty, partially or completely) and if you receive monoamine oxidase inhibition therapy (MAO) (class of drugs used to treat depression) or within fourteen days of discontinuation of such treatment. It is also contraindicated if you have severe hypertension (high blood pressure), or severe coronary disease (a disease that affects the arteries of the heart, coronary arteries) and in those who have features (abnormal state of hypersensitivity) to its components, for adrenergic agents (those that stimulate the activity of adrenergic receptors) or another drug with a similar chemical structure. The manifestations of peculiar patients for adrenergic agents include: insomnia, dizziness, weakness, tremor, or arrhythmia (change of heart rhythm or rhythm). Pseudoephedrine hydrochloride can produce stimulation of the central nervous system with convulsions or cardiovascular collapse (heart attack) accompanied by low pressure. Pseudoephedrine hydrochloride should be used with caution if you have high blood pressure, diabetes, coronary heart disease (heart disease that stops receiving or receives a small amount of blood), high intraocular pressure, hyperthyroidism (elevated thyroid hormones), renal failure or prostate hypertrophy (enlarged prostate) and hyperreactivity (excessive reaction) to ephedrine. Allegra® D 24-hour tablets should usually be avoided if you have kidney failure. Do not exceed the recommended dose. If you experience nervousness, dizziness or insomnia, stop using it and seek medical attention. You will be advised not to use Allegra tablets at the same time® D 24 hours with other antihistamines and decongestants. Pregnancy and breastfeeding there are no adequate and well-controlled studies in pregnant women. Allegra® D 24 hours can only be used during pregnancy if the potential benefit justifies the potential risk to the fetus. It is not known whether fexofenadine is excreted in breast milk. Since many medications are excreted in breast milk, caution should be exercised when Allegra® D 24 hours is given to women who breastfeed. Pseudoephedrine hydrochloride is administered only spread in breast milk by nursing women. It should be decided to stop breastfeeding or discontinue the drug, taking into account the importance of the drug to the mother. Caution should be exercised when Allegra® D 24 hours is given to women who breastfeed. Other risk groups Allegra® D 24 hours should not be used by patients who are hypersensitive to any component of the formulation. Because of the pseudoephedrine component, Allegra® D 24 hours should not be used by patients with angular glaucoma, urine retention, or patients receiving a monoamine oxidase inhibitor (MAO) or within 14 days of discontinuing the use of the MAO inhibitor. It should also not be used by patients with severe hypertension or severe coronary heart disease. The safety and efficacy of Allegra® D 24 hours in children under the age of 12 is not established. In addition, individual doses of Allegra® D components 24 hours exceed the individual doses recommended for children under the age of 12. Allegra D 24h is not recommended for children under the age of 12. In a recorded clinical experiment, no differences in responses between elderly and young patients were more likely to have adverse reactions to pathological amines. The pseudoephedrine component of Allegra® 24-hour D is known to be substantially excreted by the kidneys, and the risk of toxic reactions to this drug may be increased in patients with impaired kidney function. Liver function (decreased liver function) Dose adjustment is not required in patients with reduced liver function. Renal failure (decreased kidney function) as Allegra® 24-hour D is a single dose. A fixed dose of a daily drug that cannot be separated and renal failure increases bioavailability (a measure used to ensure that the drug is absorbed and reaches the blood or the place of its action) and prolongs the semi-sissy (a measure used to denote elimination) fexofedine hydrochloride and pseudoephedrine hydrochloride. Allegra® D 24 hours should be avoided in patients with renal failure. (decreased kidney function). Fexofenadine hydrochloride 180 mg Pseudoephedrine hydrochloride 240 mg (equivalent to 167.8 mg fexofenadine). (Equivalent to 196.6 mg of pseudoephedrine). Emitted: microcrystal cellulose, sodium chloride, macrogol 4000, macrogol 400, povidon, magnesium stearat, silicon dioxide, cellulose acetate, talc, copovidon, titanium dioxide, bright blue aluminum lacquer dye, hypromezosis, sodium croscarmosis, triacetin/glycerol triacetate, purified water, black iron oxide, isopropil. Presentation Allegra D 24 Hours Long Release Coated Tablet Pack with 5. Most reports of an overdose of fexofenadine hydrochloride have limited information. However, dizziness, drowsiness and dry mouth have been reported. Pseudoephedrine In high doses, sympathizers (pseudoephedrine class) can cause dizziness, headache, nausea, vomiting, sweating, home, tachycardia, docord pain (chest pain), rapid heartbeat, hypertension, difficulty urinating, muscle weakness and tension, anxiety, anxiety, and insomnia. Many patients may present with toxic psychosis (neurological changes caused by drug overdose) with delirium and hallucinations. Some may develop cardiac arrhythmias, circulatory collapse, convulsions, coma and respiratory failure. Product Code: 88940 Brand: Allegra EAN: 789105802862 Type of Medicine: Reference Registration MS: 113002620085 Therapeutic Class: Systemic Drugs Nasal Active Ingredient: Pseudoephedrine Hydrochloride and Fexofedine Hydrochloride Your Assessment will be approved before it is published.
