In this Tutorial Krita Animation for Beginners we learn how to download Krita, how to draw in it, how to live up, and how to export videos so you can upload it to YouTube! - You'll start your own animation at any time, even if you've never drawn before! Check out my Krita Animation Beginners tutorial here: [How to Spice Up in Crete for Beginners - FREE SOFTWARE! DOWNLOAD CRIT FREE: how to get started with animation?](#) The way animation works is a giant stack of drawings. Each drawing with a character or object is slightly different from the picture in front of it. Many drawings end up similar to other drawings. When this stack of drawings is played consistently at a certain speed, usually 24 frames per second, it will look as if it is moving! One of my old flipbooks. Age: 11 I wish I'd already had a survival animator's kit as a kid! It's an invaluable resource to have on your desk a link constantly while solving problems in animation that the internet can't replace. Animator's Survival Kit Goes Over Everything: How to Revitalize Your Mouth, How to Spice Up Walk Cycles 12 Principles of Animation How to Spice Up 4 Legged Walk Cycles... And more! I seriously can't recommend this book enough. Go check it out!! How to live up on a computer? While you can use the mouse to draw, it's not recommended. Not only is it difficult, but it can damage your wrist and cause carpal tunnel syndrome. Instead, I would recommend drawing pills to learn how to spice up in Crete. Here's a cheap but good, drawing pill I'd recommend! What if I want to draw on the screen and see where I draw? Good moment! If you can afford it, drawing on the screen will be much easier to learn than a tablet because you can see where you are drawing. With regular pills, it took me about 3 months to get used to hand-hand coordination. Wacom Cintiqs are a good alternative. With a drawing monitor, you can draw on it like paper! Most professionals and animation studios use Wacom Cintiqs as paint monitors because they are high-quality, have a few extra features and have the most supported tablet drivers for a variety of programs... But, they come with a huge price tag! So what if I can't afford Cintiq? Fortunately, there are a lot cheaper, but still good, drawing monitors out there! Here are some drawing monitors tablets I would recommend: Huion GT-190 (\$399.95) One thing to note with these off-brand tablets, compatibility can be a challenge, and installing a driver can be a pain, but once you customize it, these cheap drawing monitors will offer basically the same functionality and drawing ability of Wacom Cintiq for a fraction of the cost! I my out-of-brand Yinyouva MSP19U for 2 years no problem and loved it! Here's what I'm currently using my job: What kind of program should I use? This is a very common question. The truth is, it doesn't matter. No animation program is perfect. I personally use the Toon Boom Harmony Premium 14, but it's very expensive because it's a professional animation program. For beginners, I would recommend Crete. I believe this is the most budding free animation program. OpenToonz is another great free alternative, but can be challenging to learn! Consider checking out my blog to see other great free animation programs! Free resources for your cartoons such as free music, free textures and free sound effects: Try different programs, most paid programs have free trials or educational versions, so you can try them before you buy! See what works for you! How to draw in Krita Create a new file by clicking on the new file. Give this file the size you'd like. To draw around, I would do in 2000 x 2000 square. When you press well, Crete will start you with a blank canvas. Navigate To pan around the canvas, hold the space, click and drag to move around. Zoom in by clicking Ctrl and Zoom by clicking Ctrl - To undo, click Ctrl - To re-make, tap Ctrl and Shift - Layers You can think of layers like stacks of paper. Whatever is on the bottom layer will be behind, and what is on the top layer will be ahead! To add a new layer, click the New Layer button. To remove the layer, select the layer and click the Trash button. Brush the tool to select the tool brush, click on its icon, or click B. You can change the size of the brush using the left bracket, the right bracket. To erase, click on this eraser tool at the top, or press E, and your current brush will become an eraser. To choose the brush, press the right button on the canvas to lift the brush collector. Use the menu button in the bottom right corner to select a different group of brushes. You can use the middle of the fast picker to choose the color! To get rid of the fast picker, just press the right button again. Form Tools No Drawing Pills? No problem! Line, Square, Circle, and Polygon help you create accurate lines for animation. The form tool will use the properties of any chosen tool. Adjust the filling and contour in the tool settings window. Choose and transform To choose a certain part of your work of art, use the tools of choice that look like dotted lines. Each of them functions differently. Transform, use the conversion tool, or click Ctrl and T Position moves by dragging the tool. Turn the artwork, dragging only around the corners. Scale by dragging corners (hold Shift to keep proportions). Obliquely, dragging the middle of the edge. And when you're done, click Enter to confirm your transformation! Save the file Go to the file to save, and choose to choose You'd like to save the file. Save it as a Krita document to save all the level and animation information. To save for the Internet, go to the file of the export. Save as .png for use online or other programs! As a revitalization in Crete first, tune in before we can start animation, we need to grab the right panels. If you ever need to reset your workspace by default, go to the default workspace. Grab the following windows from the setting of the dockers zgt: : Timeline of Bow Skin Animation These new windows will allow us to start the animation! To move the window, drag the window name to where you want it you can drag the windows on top of each other to create tabs! If you've got a layout the way you want, you can save it by taking it off in a working space of the new workspace... I prefer to have my timeline at the bottom of the screen, since I need a horizontal space: Right-Click, Create a new frame One important thing to note before you do anything, you need the right click the first frame on the timeline and choose a new frame to start the animation/drawing. If you already have a piece of art on this layer, it will erase your artwork and you will have to copy/paste/combine it back in. always start with Right-Click, New Frame. You'll notice a new Light Bulb symbol next to the layer's name, as well as a lock and visibility switch for that layer. Draw your first shot in animation! Start with something simple. Practice the basics until you have to think about them anymore! Bouncing the ball is a great place to start. The second frame on the second frame of the timeline, Right-Click and select a new frame. If you have this button on (Automatic Frame Mode located in the animation window), you can go to any blank frame, start drawing, and this will create a new frame for you! You can also click remove to create a new blank frame so... Onion Skinning In order to live up, we need to be able to see the frame earlier so that we can see where our character or object is going to go. We also have to see the footage before and after, so that we can draw the proper between the two poses. This is what onion skin is for! You will find bow skin in almost every animation program. To turn on the onion skin, click on the light bulb in the Chronicle window. To customize how many frames before and after you see, as well as color toning, you can customize them in the skin bow box. Turn on and off the onion skin frames by selecting the numbers on top. Adjust the opacity of onion skins by dragging vertical columns. Start animatas with! Use the onion skin and start animatas with a moving little-named pattern with each new frame. Animation is a tedious process, and it Plenty of time. ... But there is nothing more satisfying than seeing what you have done about life right in front of you! Here are some tips on how to revitalize Crete: the frame will keep up the drawing takes its place. To make the animation disappear, click Right and select a new frame in this frame. You can copy the footage from Ctrl and Drag. Move the frames by selecting the frame and then dragging it. You can move and copy either one or a group of frames. Choose a few separate frames with the ctrl and click. Or select the first from the group, then Shift and select the last one. Alt and Drag moves the entire timeline. You can import files using files from imported animated frames. In this way, you can import either a sequence of images or one image. Import audio by clicking on the speaker icon in the top left top left of the Timeline and select Open Audio. Export Animation Select File render Animation Check Render. Choose a GIF. Want to export as a video? Watch the tutorial here. Select Delete Sequence after rendering we really don't need an additional sequence of images. Browse where you want it saved and give it the name of the file. Click OK! grats! You made your first animation! :D Keep animating! Animation is a lifelong learning process in which there is always much to learn. This is what makes animation so frustrating from time to time, and so rewarding others with everything you get to learn. Animator - actor, set designer, choreographer, cinematographer, historian, director, etc... Etc... Because of this, we all learn, there will always be those who are better than us, and those who are worse than us. We should not be jealous, but learn and learn from those who are better than us, and encourage those who have not yet learned what you know. Ask questions! Give feedback! What I like most about the animation community is that we all support each other! We want each other to succeed! So keep trying!! ... and draw every day! If you want to download the original files that we created for free, check out the Gumroad link below! It's pay what you want, so just enter \$0 and you'll get it for free! :D If you have any questions at all, feel free to leave them in the comments section below, or email me on jessejajones@gmail.com! I believe Crete is a great beginner tool for learning how to live up as well as a fairly reliable program for any industry-level animator! And best of all... IT'S FREE!! Free!! krita animation manual pdf
