This book provides the necessary reading material for students, graduate students, researchers, scientists and scientists taking modules in biotechnology through environmental sciences, environmental management and environmental biology programs. It is also suitable for water, waste management and pollution control specialists. This book provides the information needed for students taking biotechnology courses in environmental sciences, environmental management or environmental biology programs. It is also suitable for those who study water, waste management and pollution control. Topics include biodiversity, renewable energy, biorecovery technologies, recombinant DNA technology, genetic engineering, solid waste management, composting, vermicompostation, bio-ute, chemical pesticides, biological pest control and genetically modified organisms. The book also discusses bioethics and risk assessment, intellectual property rights, environmental clean-up technologies and environmental nanotechnology. Stock image of this item: Alpha Science. Condition: How new. Used as a new one. The book is new and unread, but can have minor shelf wear. Your purchase helps support the Sri Lankan Children's Charity Rainbow Center. Our donations to the Rainbow Center have helped provide education and shelter for the hundreds of children who live in appalling conditions. Seller Inventory No. 1-R-028-01930 For more information about this seller Contact this seller 2. Stock image of this item: Taylor and Francis Inc, USA, 2010. Paperback. Condition: New. Language: English. A brand new book. This book provides the information needed for students taking biotechnology courses in environmental sciences, environmental management or environmental biology programs. It is also suitable for those who study water, waste management and pollution control. Topics include biodiversity, renewable energy, biorecovery technologies, recombinant DNA technology, genetic engineering, solid waste management, composting, vermicompostation, bio-ute, chemical pesticides, biological pest control and genetically modified organisms. The book also discusses bioethics and risk assessment, intellectual property rights, environmental clean-up technologies and environmental nanotechnology.
