Here's a link to the google Pixel 3 camera (slomo working): copyrights are designed to harm 3 Buggy Android 10 for GCam lovers, but hopefully after reading this you'll love it. Is GCam stuck on HDR processing? Or Shutter doesn't work? Or the picture does not save? Or Save just a green photo? Will have to restart after taking some
pictures?. Who needs an Android 10 GCam sleek and fast experience like a pie on Nokia devices? Obviously every one that just updated the OS is 9 to 10 including me. Here's what you need to do for a smoother GCam experience. Let's dig ... ... 1. Uninstall all GCams first (recommended)2. Install PX V4.1 camera or 4.2 choice is yours.
Download the links below, don't need to download again if you have any version of the these //f.celsoazevedo.com/file/cfiles/gcm1/PXv4.2 GoogleCamera 7.2.014.apk3. After Installing No Snap Photo, just turn off the movie and go to setting up the camera4. The settings will have the PX Mod Setting5 option. On top of the 4th issue you
will find the option of the Non-SL frame count to set it as little as possible, I suggest you put it 56. In the same menu at number 7 you will find the option of the Method of merging the power of the sabers Turn off it8. Close the
camera and goto its properties by clicking and holding the camera icon a little I will appear just click on Advanced. Click on Battery Optimization 11. On the top side in the center will be the option NOT OPTIMIZED 12. Tap it and click on the All Apps button it will take some time to download all the
apps13. Find the PX camera there and click on it, a flash toast will appear14. Click On Optimize and Made15. Reboot your device Now check the camera and share your experience, battery optimization is the main factor that worries the application. Turn off this feature for all apps that don't work normally. Even for other GCam they will
work for sure Camera was not able to capture the picture because the amount of SL needs a heavy processor, the SD665 lacks power. Its just thinking or....? ? For me, video recording is more important than Picturel used to use back.rider in Android 9, but now it's a problem (Photos are not recorded and processed for hours) 0 Original
stream of first messages and discussions here. Hello! With a lot of GCam ports out there (thanks to the developers), my goal is to make all the messages and discussions here. Hello! With a lot of GCam ports out there (thanks to the developers), my goal is to make all the messages and discussions here. Hello! With a lot of GCam ports out there (thanks to the developers), my goal is to make all the while making things as simple and clean as possible. Unlike existing ports, which have many tweaks to tinker, I aspire to a non-config port that just
works well. Please note that I am not a developer per se; These include them. you see, it was just a hobby that I do in my spare time and it came to me to know one day that I want to share my efforts with everyone else. The quote: This port is designed and works well on my Nokia 7 Plus (TA-1046) running Android 9.0 pie. For the most
part, it doesn't need extra configs after installation. I did, however, provided a few extra tweaks that you can play around to your wish. If it works on your device, not the Nokia 7 Plus, it's great! If not, please don't request fixes and/or features, but instead head over to this site and look for one that works well on yours. Also, if you're into a lot
of fashion settings, this may not be the port for you. Again, check out the link for other ports. WHAT WORKING QUOTE: All photos (HDR, Portrait Mode, Panorama, Photo Sphere) and video stuff Night Sight Tracking Autofocus Motion Photobooth Lens Blur Slow Motion Face Strain for Front Camera (may be disabled in later
versions) Playground (AR stickers): download here Running with lockscreen DOWNLOAD quote: GCam 6.2. 030-N7P-test1.3 (final) (original post) Changelog: - Switch directly save Portrait Shots /DCIM/Camera (thanks san1ty): A lot of people like this feature, so here it is. But keep in mind: I haven't done any extensive tests to check if a
portrait bug from previous versions still occur here; So far so good. Use at your own risk. - Switch to using custom lib (from @cstark27): from the custom libs I've tried, Sav V3 is still the best in my opinion. This significantly reduces overall
contrast and/or saturation. It's your choice. - Included DCI-P3 color space: I honestly don't know what it does, but I hope that allows it to bring some improvement. - Corrected blurry RAW photos (thanks for tips @Urnyx05): RAW (.dng) photos will no longer be washed out of the camera. Again, if the app lags or acts strangely, just clear
application data and follow the installation instructions described in previous versions. Download: GCam 6.2.030-N7P-test1.3 Previous versions: F.A.S. Citation: What are GCam settings used for? These are additional features on top of the original Google Camera app for Pixel devices that give more room for the user to play around.
Later versions have a Gcam settings info page called O, which summarizes each additional settings for additional settings in page called O, which summarizes each additional settings for additional settings in
case someone wants to make some additional changes. Why, when I fully zoom in, the display stops halfway, but the final photo is actually enlarged? Why, when I double-click on the zoom, the final photo is actually enlarged? Why, when I double-click on the zoom, the final photo is actually enlarged? Why, when I double-click on the zoom, the final photo is actually enlarged? Why, when I double-click on the zoom, the final photo is actually enlarged? Why, when I double-click on the zoom, the final photo is actually enlarged? Why, when I double-click on the zoom, the final photo is actually enlarged? Why, when I double-click on the zoom in the zoom i
only 4MP while the spare camera can go up to 16MP? I honestly don't know why, but I'm sure only a nokia camera can use the full potential of the sensor. Even third-party hardware analysis applications will always declare 4MP. But it produces some seriously good photos for 4MP size, right? Why isn't it installed in my device? This may
be for several reasons: (1) it was designed for Android 9.0 Pie, so there is no certainty that it will work on lower versions; (2) may be in conflict with an existing GCam application so in this case, delete that first before installing this. If it wasn't, the reboot might have helped. Or at worst, a hard reset can be done. I LIKE THANK YOU
awesome developers for great GCam ports. Of course, special thanks to @Arnova8G2 @cstark27, @S4turno, @Tolyan009, B-S-G, and everyone on the Nokia 7 plus Google Camera HDR XDA thread and other social media platforms. Best! Sztaniel(2nd March 2019), wapvikas(8th March 2019), wapvikas(8th March 2019), 3rd March 2019, 05:19 PM |#23 Senior Member More Some of you who were playing around with RAW (DNG) files on the OP6/T probably noticed that these are somehow wrong in terms of whitebalance, exposure, and are also heavily desaturated. This makes it quite difficult to even
make these DNGs look like their JPEG counterparts. Some time ago Savitar was very helpful and gave me a quick tutorial on how to patch these DNG files created by GCam. So all the credit to Savitar! This patch is looking
for DNG files stored in pictures/raw (default GCam raw folder). It won't create new files, but will keep existing ones. What you need: - - files with lightning must be extracted in your device's local storage catalog. When all is setup, start exiftool, tap on the advanced settings button at the top right, select Execute command and insert this
code: Quote: -overwrite original -m -ProfileName=Adobe Standard -BaselineExposure= -ProfileHueSatMapDims=90 30 1 -ProfileHueSatMapData1<=/storage/emulated/0/satData1.bin -ProfileHueSatMapData2&lt;=/storage/emulated/0/satData2.bin -ProfileHueSatMapDims=36 8 16 -
ProfileLookTableData<=/storage/emulated/0/lookdata.bin -ColorMatrix2=1.2341 -0.666 0.0994 -0.2806 1.0683 0.2451 0.0127 0.0727 0.5789 -ColorMatrix1=1.0612 -0.4169 -0.1001 -0.3982 1.2675 0.1412 -0.0558 0.162 0.5206 -ForwardMatrix2=0.4187 0.4351 0.1105 0.1772 0.7902 0.0326 0.047 0.001 0.7772 0.4079 0.1337 0.1871
0.7745 0.0384 0.0618 0.0047 0.7586 /storage/emulated/0/Pictures/Raw -ext dng (add it to favorites for future use) Depending on how many DNG files you have stored on your device, the fix may take some time. When the process is complete, you will receive a composite log. Keep in mind that this patch
does not detect already-corrected DNG files. There is no harm in re-fixing the patch again, except as it takes longer depending on the number of files. The results speak for themselves: before and after the DNG files have been corrected. All screenshots show raw materials after downloading DNG in Photoshop Express. Attached by

I appreciate that you share this information, but I have several queries: the quoted post above has to do with another topic. As in your previous and
perhaps later posts, try to make it as relevant to this port as possible. Thanks for the head, though. Please include a link to the original post/s where you received the information you share. will appreciate the recognition. March 8, 2019, 04:25 pm -#30 quote: Originally published by AthulSubash I keep getting crashes on Google photos
whenever I take a couple of photos with traffic on. I tried to turn off the hdr I was working properly. Everything else works great just that. This seems to be the problem between GCam ports and Google Photos. I also have no
idea why this is happening, nor how to control and fix it. It plays perfectly in the desktop or elsewhere though. March 8, 2019, 04:28 #31 quote: Originally published by NahuelMS Yes, this happens with other versions from other developers too. It gets stuck when taking multiple photos and changing between modes, such as for selfies or
nightsigth. Oh, sorry for your situation. The fact that it's constantly happening at different GCam ports, the best I could think of is a hard reset, but it's up to you are the true MVP of this community! Night SIght works
well. I found the error though. If you turn on the classic photo viewer and you take a picture, then delete it in the app, it only removes the photo in the app photo gallery, but it will not be removed in the Google Photos app This is because the classic photo viewer is only capable of local action on the phone only. When a photo has already
been uploaded via automatic backup in the full Google Photos app, deleting that photo with the help of a classic viewer will only remove a copy of the phone and leave the downloaded copy intact; so when you open Google Photos, there's still a photo cloud only a copy. March 1, 2019, 10:31am No. #12 Junior Member Read More quote:

this works the night sight.. March 1, 2019, 4:35 p.m. #14 Senior Member of More Hello. Thank you for your work. Flash in night mode works with 2.3? March 1, 2019, 5:09 p.m. #16 Senior Member Read More: Originally published back.rider5555 Original thread of first posts and discussions here. Hello!
With a lot of GCam ports out there (thanks to the developers), my goal is to make all the necessary functions work on our phone, all the while making things as simple and clean as possible. Unlike existing ports, which have a lot of tweaks to tinker with, I aim for a non-config port that just works well. Please note that I am not a developer
per se. You see, it was just a hobby that I do in my spare time and it came to me to know one day that I want to share my efforts for everyone else. WHAT WORK All photo photos Portrait Mode, Panorama, Photo Sphere) and Video Stuff Night Look Tracking Autofocus Motion Photography Photobooth Lens Blur Slow Motion Auto Lens
Distortion Correction on Faces (for Front Camera) Playground (AR Stickers): download here Running from download here Running from
switches to. - Added switch for Enable Lens Blur: to fix an error where the app falls when trying to run a video label from the launcher, turn it off. - The app now automatically restarts for every change in GCam settings - the Pixel 3 AWB is now set for default outages: you can switch it back to the GCam settings whenever you like. - Re-
painted GCam settings icons as an app theme: information about the version at the bottom has also been added. NOTE: Fresh installation or clear storage after installation about the version at the bottom has also been added. NOTE: Fresh installation or clear storage after installation or clear storage after installation or clear storage after installation about the version at the bottom has also been added.
switches to other modes and back again. - The manual balance of white in camera mode does not work, but it works in other modes; In portrait mode and on the front camera, it works with a crane to focus. - 60 FPS video does not work and only produces 30 FPS. I'm also not sure that our phone is even capable of recording 60 FPS in the
first place. - Some reports mention the lag of Google Photos. In my case, the Cleaning Photos cache app did the trick and so far it works fine. The whole purpose of this update is for the Night Sight fix, but I figured I'd do some redesign along the way. I hope you enjoyed it! By the way, I've seen comments, particularly from the original
Stream and Nokia 7 Plus (Global) Facebook Group, that the photos with the Pixel 3 AWB coming out are very different from what their eyes perceive, while others like natural colors without light shades (Pixel 3 AWB does an impressive job of
fixing WB). And as for the red dyes. I don't know why, but I think it's the effect of heavy handling with confit, Again, it all comes down to personal preference; if you can turn it off, I'll be taking a break from this project for a while again as I get off track from work and
study because of this lol. We need to focus. Again, thanks for the great help to everyone! Download: Previous versions: I WOULD LIKE TO THANK awesome devs for great GCam ports. Of course, special thanks to @Arnova8G2, @cstark27, @S4turno, @Tolyan009, B-S-G, and all on the Nokia 7 Plus Google HDR HDR camera thread
and other social media platforms. Best! @Your effort on this project is really appreciated, Please take a look, I do not work on quality and sharpness as the photos are produced in most cases dark and too much noise etc. March 1, 2019, 08:20 pm #17 senior member Of More just wanted to let you know that your port is running almost
petfectly for the Nexus 6P on Pie custom rom, only the viewfinder in the front of the night camera sight up, but the white is functionally and the libs or at least the last 2 libs of this version of GCam (MGC_6.1.021-BSG-Arnova-
based v.1.4a-TlnNeun.apk) because its good for our N7P.. March 2, 2019, 09:02 #19 Junior member More I continue to get crashes on Google Photos with traffic on. I tried with the 2.3 backrider version and a few others and all of them crashed while turning on the traffic on Google Photos. When I tried to
turn off the hdr I was working properly. Everything else works great just that. March 2, 2019, 09:43 #20 Senior member of Buenos Aires Read more guote: Originally published back.rider555 Have you tried cleaning the data/re-installing the application? Or tried to reboot the phone? The most serious case I've experienced so far was when
the app started crashing at the start that I can't use it at all; this happened after re-switching between slow motion. One phone reboot fixed it, however. Yes, this happens with other versions from other developers too. It gets stuck when taking multiple photos and changing between modes, such as for selfies or nightsigth. March 2, 2019,

Pablo More Mistake, taking a few portrait photos I noticed that when you take a lot of portrait photos one by one, the camera will lose some of them while saving/processing. Browsing them in Google Files/Photos shows some damaged files and it also doesn't appear in the viewer's classic photo. I tried to turn off the Save
directly/DCIM/Camera and I think this has reduced this error happening. I just want to let you guys know and also hope to get this fix. March 9, 2019, 04:15 #35 Can you share some comparative images showing that this port produces, say, the best guality? March 9, 2019, 04:29 #36 guote: Originally published Gerald Lanz I noticed that
