In each version of Android, starting with Android 2.3, the developers hid the Easter egg. To turn them on, follow three simple steps: go to your phone's settings. Scroll down and tap the menu item about your phone. Tap the current version of Android several times in a row. With Android version 2.3 alias Gingerbread the first Easter egg of its kind was introduced. If you follow the top three steps, a picture of zombie gingerbread awaits you. This image is the zombie art of Jack Larson. Matching the name Honeycomb you can see on Android 3.0 as an Easter bee egg in a blue neon look. If you click on this blue bee, there will even be an inscription Mzzzzzzz. With great imagination, this word is very similar to the sound of a flying bee. Easter Egg Android: Honeycomb's version 3.0 (Photo: Screenshot) Ice Cream Sandwich is the name 4.0 on Android. After the next three steps above, the android's sandwich look awaits you. New from this version: Animation! When you click Android Ice Cream Sandwich, you'll watch Android sandwiches fly through space. In three versions of Jelly Bean, all of which have the same name, you can see red candies of the same name. You can snap them off the screen with one finger. In a version called Kit Kat, Google goes even further than previous versions of Android. If you've opened the Easter egg, you can briefly touch the

display to rotate the emerging K. In addition, you can touch the display for longer to display the red KitKat screen. Tap the Easter Egg again longer, you will see an animation that you can interact with. Android L also includes an Easter egg. If you repeatedly click on the Android version in the settings, two rectangles will appear. One is red, the other is blue. These rectangles jump on the screen every second and change their shape. It's very similar to Webdriver Torso. This YouTube channel sparked numerous conspiracy theories online until a blogger found out that it was run by Google. This is a test account to measure video and sound quality. Rectangles on Android L (Photo: Screenshot) On Android 6.0 alias You can even play correctly: go to your smartphone's settings and scroll down to the phone info menu item. Click on it and find a subs of Android Version. By clicking on the version several times, you open a clone of the popular game in the style of Android Flappy-Bird. Again you can finish the game through the Back button. With the update for Android 7 there is also a new Easter egg. This time it is a small mini-game with cute cats. As before, you have to activate the Easter Egg in the settings by clicking on the Android version several times. By pushing the Android logo for a long time, you can attract and catch a few cats with different treats. The following hands-on advice contains detailed instructions for cat games on Android 7. Unfortunately, the Easter egg does not work on every smartphone. Compared to the previous Easter eggs, the surprise in Android 8 is quite disappointing. If you hit the version number several times, the white circle will appear in two yellow circles. Click on the white circle several times and then hold it. A small black octopus will appear probably due to Android O. If you place your finger on the head of an octopus, you can drag it back and forth across the screen. No more, no less. Google didn't put much effort into the Easter egg on Android 9 either. As usual, click the version number several times, the large P will appear surrounded by colored circles. These circles change their pretty bright colors pretty quickly. For too long, however, you should not consider an Easter egg. After a few seconds, the vision becomes very stressful for the eyes. Easter Egg in Android 9 Pie (Photo: CHIP) Is much more creative in Android 10. Here Google has finally tried again for a little game. If you open the Easter egg using the version number, the letter Android 10 will appear. If you hold your finger on an android or two numbers, you can rotate and move them as you like. But that is not all. Hold 1 and rotate the number by about 45 degrees. If you then place 1 above zero, the zero becomes q. Now click android a few times, you get in the actual game. This is a small puzzle game. Also on Android 11 Beta 3 you will find a small waiting game for the Easter egg, which is about a small cat - similar to Android 7.0 To activate the Easter egg, call Settings and there about the phone. We see there Android 11 as a version, click on it. A circle appears on the screen how to control the volume. Turn the volume control until 11 appears. It takes three tries. At this point, an image of a small cat appears at the bottom of the screen. This cat emoji indicates that you will find a new game in the power menu - but you will need to add it first. You can do this by clicking the switch to enter the menu. Click on the three dots near the house and select Add controls - show other apps - cat controls. Choose jets of water, a bowl of food and toys. In the Power menu you can use this utensil to attract a virtual cat. Now you have to wait until you get a notification that the cat has arrived. (Tip, originally written by Alexander Kuhnau) The developers of the Android mobile operating system are known to hide Easter eggs in various versions of the OS. Android Nougat also has an Easter egg. Easter eggs are repeatedly hidden by developers in apps and games and can usually only be found by accident. With Android 7, cat lovers in particular get their money's worth. How to get to a secret mini-game on Android 7; Opens the Settings app. Scroll through the device information and open the menu. Controls the Info Software area. Here you can find the Android version option. Presses the button with the version number several times. The Big N appears to refer to the Nougag version. You're not done yet. Click N. Waits several times for the cat to appear at the bottom of the screen. Here you can click on the cat. Drag your finger down from above to open up quick access on Android. Chooses a function to edit quick settings. Drags a new cat tile into quick settings. Pushes a new icon. Android: App Cache Empty (illustrated instructions) Android N: Easter Egg with Cat Now you have a little Tamagochi-like game on your smartphone. You can attract the cat by clicking the food icon. You can give the little animal a name. You can also share your new virtual pet with your friends. After a while, however, the cat disappears again and you have to provoke the Easter egg as described above again through the Android settings. Google developers are always available for little jokes. The Flappy Bird clone is hidden in Android 5.0. If you don't have an Internet connection in the mobile version of Google Chrome, you can also bring entertaining dinosaur games to the screen. A new Easter egg can already be found in Android 8. Hidden games can also be distant past, always on screen in a similar way. However, the final Easter egg may still change for the final release. Flagship quiz: iPhone X vs. Note 8 vs. Pixel 2 vs. LG V30 I have Huawei Honor 6x and would like to open the Easter Egg Android Nougag. I get to the nougast sign where I would have to click it a few times and then keep it down... But if I do, it's not going to work. Many of my family also have Huawei devices and they don't work... Is it because of Huawei? Can someone help me?? Thank you :3 ... Viewing the full Android issue is open source and can therefore be configured anywhere. It is possible that Huawei has removed this Easter egg. Usually, after holding the press, a small symbol with a cat in the bottom half should appear in the middle. If there is a sign of prohibition (circle, crossed out), the Easter egg is deactivated. After its activation, an icon of the Easter egg was to appear when setting up status bar icons. No, it's ok if you tip on it a few times, a small icon comes down in the middle of the screen (don't know what it should represent xD). xD).
