Earlier today, The Wall Street Journal reported that Apple Music has overtaken Spotify in the number of paid subscriptions in the United States. However, Spotify still leads the charge across global subscriptions. According to people familiar with the matter, Apple Music has 28 million paid U.S. subscribers at the end of February. With 26 million, Spotify reportedly isn't too far behind Apple's music streaming service. This is impressive when you consider that Apple launched in the US within a year of Spotify being launched there. Apple also leads Spotify when it comes to growth rates. While Apple's monthly growth rate is reported to be between 2.6 and 3 percent, Spotify is between 1.5 and 2 percent. This means that, at best, Apple Music is growing almost twice as fast as Spotify. The good news for Spotify is that it still leads Apple by a wide margin when it comes to global subscribers - just over 95 million for Spotify compared to about 50 million for Apple, according to the figures. Spotify also reportedly leads Apple in the number of unpaid accounts, but we don't know how much revenue these accounts generate. This tit-for-eye between Spotify and Apple is not limited to their music streaming services. In March 2019, Spotify filed a complaint with the European Commission against Apple. Spotify argues that Apple's App Store restricts choice and curbs innovation in part because of Apple's 30 percent reduction. Apple issued a response the day after Spotify's complaint and said it was spreading misleading rhetoric. Expect to hear more from the two companies as time passes. NEXT: Spotify is reportedly working on several new features, including sleep timer Tagged: SpotifyApple Music Earlier this month on the Internet, desktop and iOS version of Spotify saw a redesign that featured a darker theme and a simpler interface. At the time, Android users were left in the dark (see what I did there?), but no more. To date, Spotify's new experience is the rollout for Android users. However, this is a step-by-step deployment and can take weeks to reach everyone. For those who don't want to wait longer than they should, Spotify offers APK directly from its site. So what's new here besides the redesigned look? Probably the biggest change outside of the new design language is the addition of your music, which replaces the Collections. This is more than just a name change, since the new music section allows you to directly keep albums on your music list, something you previously couldn't do. There's also an improvement in the Review feature, offering better, more relevant content according to Spotify. This change includes a new section of Genres and Mood, which has things like mood, party, pop, workout and a number of other categories. Overall, Spotify feels less cluttered and easier to use than before. Of course it's this a little adjustment for regular Spotify users. To check the app update for yourself, you can grab it through the Spotify website or via Google Play. What do you think of the new look? Like it, or do you prefer the original user interface? Spotify is great for social listeners who don't buy music and trust Spotify to serve what's popular or what algorithms say they like. Spotify Connect's ability to hand out a queue between almost any device is also invaluable. The \$10/mo on Spotify Great Choice Better Sound Quality than Apple Music's Best-in-Class playback handoff between devices The Best Streaming Package for Students 10,000 Song Library limit is easy to hit No Cloud Integration for the Acquired or Loaded Music Lower Support Experience, especially on Android Apple Music may have been a relatively late streaming scene, but the service has made some significant progress, especially on Android in the last few months. Even if your phone doesn't have an apple on your back, Apple Music can work very well on it. \$10/mo on Apple Wider Music Choice with Apple Music Exclusives Better UI with Light/Dark Options theme Easier Library management and acquired music integration features still late Android Algorithms is not as good as Spotify's Viewing is a little more difficult Music makes my world go by, and if it makes your get around, too, then you know exactly how important it is to have a streaming service you can trust. The sound quality and limitation device Spotify Premium offers audio streaming quality of up to 320kbps on Extreme quality and up to 256 kbps while playing on Chromecast, while Apple Music streams at 256 kbps. Both services sound great when played through phone speakers, Bluetooth headphones, and streaming to connected speakers. Spotify Apple Music Wear OS app ✓ ✗ Android TV app ✓ ✗ Android Auto app ✓ ✓ Web Client ✓ In beta Chromecast Compatibility ✓ In beta Google Assistant compatibility ✓ ✗ Max sound quality 320 kbps 256 kbps Device limits only for standalone (5 devices) 10 devices Offline limits 5 devices 10,000 songs 10 devices Talking about connected, Apple Music has finally added support To Chromecast in the beta version of the Apple Music Android app, that eliminates one of the biggest service problems for Android users. It also launched a web player in beta - bringing Apple Music to Chromebooks and work computers you couldn't install iTunes on - and added Auto app for us to enjoy our tunes safely and easily while driving. Apple Music is still unavailable through The music service is tie-in, and as long as it is, Spotify still has the advantage of both limit device and cross-device playback. Spotify Connect connects to a wider range of speakers and devices than any other music service on the planet, and remains the only service that integrates with Google, Amazon, Apple and Sonos smart speakers. Spotify's five-device limit may sound less than Apple's limit of 10 devices, but since Apple Music's device limit applies to all device authorizations, and Spotify only applies to devices you download music to, it's much easier to get within apple's limit than Spotify. Apple Music has a slight advantage in that if you have a phone with a lot of memory, you can download more than 10,000 songs, which is a limit to the size of Spotify for both downloads and the library. Libraries and features like Apple Music and Spotify have more than 50 million songs available to their users for streaming, but Apple Music has the best selection of artists and songs, especially when it comes to more niche genres such as musicals and J-Pop. Spotify has more indie content, but Apple has used the power iTunes has amassed as the first and most used digital music store of the 2000s, and it shows. The Apple Music song limit is 100,000 songs, which is ten times more than 10,000 Spotify songs. Apple Music also doesn't consider any purchased songs added to your library via iTunes Match to this 100,000 song limit, which is a big advantage for listeners who still buy music that doesn't end up in streaming directories (like me). Spotify Apple Music Songs available 50 million 50 million Library limit 100,000 songs 100,000 songs Playlist size limits 10,000 songs 100,000 songs Genius Lyrics (display on device and Chromecast) ✓ qqt;5 qqt; Gapless Playback Crossfade Only (not when casting) Album and platform depends App theming Dark themeBottom tab White and Dark TopicsBott Tabs Support quality New featuresVery slow to fix bugs on Android Slower To add new features ToGetting better on Android bug fixes Spotify automatic stations and suggested the songs seem to be a little more accurate in their predictions than Apple Music, although both are still unable to nail down my tastes half as well as YouTube Music does. Opening and browsing is generally better on Spotify, but if you tend to listen to music you already love more than new content, Apple Music makes it easier to search and manage music in your library than Spotify does. When it comes to interfaces and UI, beauty is really in the eye of the beholder, but I Admit that apple Music's user interface has grown on me significantly since adding a dark version of the theme and adopting the bottom navigation tab, something Spotify has had for years. I understand that the bottom tab on Apple Music put the library on the left, not the right, since I usually have one hand my phone in my left hand, holding drinks or bags, but The tab from Spotify is something that just doesn't replace you well. Apple Music is currently playing the layout is also much cleaner than Spotify, and the extra space between playing controls and looking for a bar to help avoid random passes and tends to when trying to pause or rewind. Apple Music's sing-along style lyrical display tops Spotify-based style maps, with Apple also having lyrics for a much wider selection of songs. However, Spotify's ability to select a few songs in the Now Playing queue to add to the playlist or remove is nice compared to the one at a time, the control system on Apple Music, although Apple Music animation and user interface to move between the queue and now playback is much smoother. Plans and prices of Spotify Premium for family and Apple Music family plans as much as \$15 a month and give up six users of their own premium subscription account. Everyone in Spotify's family plan has to live at the same address, and you can't change addresses once it starts; if you move, you have to either go to individual plans or delete your accounts and start over. Apple Music's plan lacks these restrictions, and Apple Music also has an annual billing option for individual plans, saving \$20 a year. Spotify Apple Music Free Level ✓ ✗ Trial period 3 months (individual and student) 1 month (Duo and family) 3 months Monthly price \$10/month \$10/month Annual Price Monthly only \$99 Student discount \$99 Hulu's995/monthIncludes and SHOWTIME \$5/month Family Plan \$15/month \$15/month Personal Integration Library Local Integration mp3 iTunes Match Available Country 79 115 If you're in college though, Spotify Student is something what you want, hands down. It bundles Spotify Premium, Hulu (ad support), and Showtime for \$5 a month, which is much better than just getting Apple Music for \$5 a month. The only student package that even comes close to competing with Spotify Student is the Student Discount YouTube Premium, but for most users right now YouTube Music is just too unpolished for everyday use. Spotify has a free, ad-supported level of service, while Apple Music requires a paid subscription for all users, but Spotify's free level is very annoying to use, since you're stuck on shuffling all the time. Spotify recently stumbled upon a trial period for students and individual premium accounts to match Apple Music's three-month trial, but if you're on a family plan, your trial is still only 30 days away. It is also worth noting that for many countries, Apple Music is your only option if haven't made it there yet, but both are much more widely available than the rest of the streaming services on the market. Come for the student bundle, stay on the masterful mix. Spotify's student bundle is unbeatable, and it's hard to break away from Spotify's siren song shuffling and Discover Weekly mix once that discount ends. If you like new songs and new new songs Spotify and its unrivalled Spotify Connect feature is for you. Apple is finally starting to make sense for Android users. Until six months ago, Apple Music did not make much sense for users who at least partially did not use Apple hardware. With beta add-ons supporting Chromecast and web players, Apple Music is finally becoming an actual competitor for Android users. We can earn commissions for purchases using our links. Learn more.
