App Screenshots Diner Dash 5: BOOM! App Reviews This app was not compatible with my macbook software at all actually it increased the screen, and wouldn't even work when I was trying to play. It made my screen go all wobbly and it was a waste of money. It was a horrible nongameplay experience and I wanted to get my money back in full and I would happily delete this app I bought this app so excited to play on my Mac since I played this game growing up all the time. The intro video played then the screen was blank and did not move further into the game. Very disappointed about it and trying to see how to get a refund. The apple/App maker doesn't make it easy to do so. The developer is not putting out updates for this game, so it won't work with the latest Apple OS Mojave... they are concerned only about phone and tablet buyers.... Recently downloaded this game because it was a lot of fun and my older kids love to play it. However, since it is so outdated that it will only play the opening of the credit video and nothing past that. I can't even play on the same level. I paid \$5 for a game I can't play. I can't even play a dang game! he poked me out of the video! Downloaded this on my new Air Macbook and it won't let me go through the intro video and then freezes completely! What a waste of money!!! The game is funny. If you've ever played a Game Dinner Dash you're sure you enjoyed it. The game has the plot of a diner having to remake yourself. It may be expanded, but I know it's not a point game. The game is basically clicking on the items in the right order, while keeping customers happy. I liked it for what it was - 4 games. I only have one serious problem. There seems to be a mistake in the game. There are small video clips in this game, but getting them is tricky. It seems that it should just go straight into the game after the clip, but it is not. It just plays the clip, and if you click on the screen, it plays After some finagling, I found a way around this. I had to press the full screen button (although I was already in full twice, usually. Then as soon as the name popped out in the corner I had to click on it and ores to quit smoking. He asked if I was sure, and I'd say no. Then I'd finally be in the game. I would then go to the options to get the game back to full screen. This really needs to be fixed. I think the game is priced about right, as long as you manage to actually get to play the game. I got to level 10 and the game would play video and freeze my entire computer. Very annoying. I like the game, but definitely is a waste of money. He only downloads pre-game video and then won't play the game. I can't find a way to get a refund. It won't even work. I get the Missing Plug In screen that others get, with the only option being to quit the game by restarting my computer. If he told me there was no plugin, I could fix it, but I don't get any useful information at all. I really want my money back.
