Bos taurusThe Bos calf includes those domesticated beef common in temperate areas, and in turn appears to be from a mixture of descendants of Uro (Bos primigenius) and Celtic Shorthorn (Bos longifrons). Most cattle are believed to mostly come from a reliable uro (also called yours or ure). It was a mighty wild bull that our ancestors hunted for. In addition to the uros, there is another parent of some of our modern races, and the first known domestic breed: Celtic Shorthorn or Celtic Bull; which was smaller than uro and had a concave profile. These breeds come from Europe, recognized all over the world for the high meat yields and precocity of their young. Among the representative breeds of the Bos Taurus species are: Holstein, Aberdeen Angus, Limousin, Hereford, Charroise, Romagnala, Jersey and Swiss Brown. Bos indicusThe Bos indicus includes a hump of cattle common in tropical countries and belonging to the Cebu (or Brahman) group. They are entirely pets and no ancestors have been found in the wild since historical times. Cebu is characterized by the bend of fleshy tissues on the cross (sometimes weighing up to 20 or 22 kg), a large joule, large porridge and a voice that growls more than groans. These animals of such peculiar appearance have more resistance to heat and some diseases and parasites than descendants of Taurus Bos. Also known as the cattle cebu, it is the most popular among the tropics countries in which bos indicus animals have been crossed with Creole animals or Bos Taurus. Some of the most representative breeds are: Brahman, Nelor, Guzerat, Gyr and Indubrasil. Size: Origin of cattle. Race. Go on. Vet. LinkedIn's Horacio R. After offering his offspring gaur (Bos gaurus) and banteng (Bos javanicus), it was shown today that the cebu is actually a descendant of the subspecies of uro, which once inhabited India, Bos primigenius namadicus, and that it was domesticated around 8,000 BC. , lowering the ears, joroba pronounced on the shoulders and wide jawl. Fur is short and light in color, often white and homogeneous, although in some individuals it can be dotted with small dark spots. The relationship with people His usefulness as a pet is undeniable, for one can say serve almost everything. It is used as a cargo animal and strip carriage and plough equally; it also uses its milk, skin and meat, although it is consumed only by Hindu practitioners when the animal has previously died of old age. The great usefulness of this animal has long turned it into a Brahman tradition in the reincarnation of the fertility of the earth. His death, or the mere fact of bothering him for anything, is considered sacrilege. As a result, India is now the country with the largest bull hut in the world, and cebues stroll peacefully even through busy streets. Cebu is also present in southern China, Indochina, Malaysia, Indonesia and the Philippines, as well as the Middle East and the Arabian Peninsula. Its resistance to heat and tropical diseases led to the new empire being introduced to Egypt and then throughout East Africa and Madagascar. During the nineteenth and twentieth centuries, copies were brought to Australia, the United States and Latin America, especially to Brazil, Colombia and Central America, where they mingled with local breeds. In 2011, Brazil deciphered the Bos primigenius indicus genome to improve the quality of its meat, which accounts for most of the species' exports. References to Wilson, Don; Reader, DiAnn, Reds.
