Photo: the_ml through Visual HuntSome people love the challenge, a meditative world without words of instruction and fifty tiny bags of tiny screws. But some of us scream at the sight of the hexagonal key. Depending on which group you get into, it's either a challenge or a warning to stay far, far away. Apartment Therapy combed through the responses to a post in the Ikea subreddit that asked: What is the most difficult Ikea furniture put together that they have? And no, I don't mean the one without guidance... The three answers were: Any of the bunk beds in the Blimnes bed-storage frameAs I'm afraid means that the dresser I assembled in 2004, that only ever had two functioning boxes, may have already been my fault. Moving parts like dresser boxes always add additional complications, which is what you get with Brimnes. Trysil is apparently deceptively complex, and bunk beds require exceptional stability. Even Ikea assembly masochists should take care of it. After all, there is no place to invent a corner when you plan to loft your own offspring five feet in the air. Save your sanity: Top 3 most challenging to assemble IKEA pieces to keep up with the latest daily buzz with BuzzFeed Daily Newsletter! IKEA IKEA is almost as famous for using illustrated instructions as low prices. And now the company is taking his signature educational style and applying it to the kitchen. A Canadian branch of the Swedish furniture store has partnered with a Toronto-based marketing company, Leo Burnett, to create Cook This Page, which is basically a paint-by-room cooking. Each recipe is printed on a sheet of parchment paper using food-friendly ink and has a sketch of the amount of each ingredient needed for in the dish. All the chef has to do is fill the lines for each item (think fish, salt and lemon). Then, once the food is measured, the page can be rolled up and placed in the oven for cooking. We know it's too good to be true. To date, the company has come up with several recipes, including ravioli with Swedish meatballs (um, yam), salmon with lemon and herbs and shrimp with tomatoes and olives. IKEA IKEA Although this concept is not yet on the shelves of IKEA, we can't wait to check it out when it is there. Let's talk about the ingenious concept of a cookbook. You can find more information about this and similar at piano.io We have a small house, sprung IKEA solutions. Our family room is a multipurpose space where children do their homework, play with all sorts of legos, color, paint, etc. It is now equipped with a lot of handmade me down furniture that is too big for space, and it does not help to meet storage and functional needs. IKEA can make this space much more functional with useful storage for children's things, furniture more suited to space, and some good design. Hello! I'm Anthony and this is my entry into share my cosmic challenge. Well, as you can see, my space is pretty much anything but space! I just moved into this 2 bedroom duplex a couple of days ago and with the exception of a table, bed and bookcase, I have no furniture... 1000 bucks from Ikea would definitely have come a long way to get this place furnished!! First of all, as you can see in the photos, there is no separation between the living room and the butt of the ugly kitchen. I would like to have something to separate these two areas. I plan to get a 5x5 Expedid bookcase to share space and give me an area to put these books, CDs and DVDs so I can junk that crappy bookcase. There's not much room for a sofa and loveseat in the living room, so I would put a small modular and nice chair there to give myself and guests somewhere to sit, and the carpet area would be great for covering those ugly floor tiles. It's a cheap little entertainment center you see won't even support my 42-inch LCD TV, so it has to go!! The Tobo TV panel with media storage will look great in this area. If you look at the pictures of the master bedroom you will notice that there are no closet doors!! I think some panel curtains will cover this area nicely! Some time ago I had a Malm bed that I had to sell on Craigslist to go through some tough times and I wanted to get another one! The second bedroom/office is just like the bedroom, no closet doors!! Need more curtain panels!! I also like to put a futon there in case I have any nightly guests and some artwork on the walls to spice up the room. Well, that's it! Thank you to everyone who votes for me!! My site can be improved with some rugs, more BILLYs and FIRAs and some doors for my actual BILLYs. We buy at IKEA because we like the look of these items and enjoy the price as well. So let's see how I managed to get myself a simple home office. IKEA has its own 3D planning software, but I prefer to use others that I'm more used to. However, any CAD software will do. So I start by measuring the place I want to fill. It is important to draw power sources, TV/cable spot ... All. It's a good practice to draw representing the person and moving it all around just to check if it is possible to move in the place you are creating. I use a circle with a diameter of 60 cm. All labels here are in Portuguese though. Excuse me. But the office is basically a bunch of shelves and two tables. Sure, I didn't end up there, but I prefer to buy things slowly to try them out before buying a bunch more. Here here be able to truly know what you need. It is important to say that in your drawings, even when working with real sizes, the whole space seems to be bigger and the furniture is smaller. Don't forget that you need a place to move. Imagine yourself with a big big crowd out there. Draw more circles. I'll talk more about my home office, but here's some simple research for the bedroom as well. The IKEA website is well organized and they have furniture measures there. Sweet...! Try different pieces of furniture and different arrangements. Since my colored pallet was just black, gray and white it was easier to choose. So I just made a 2D plan. Okay, then you chose what you need and what you want (different things out there) and you've collected all the codes to make it easier to find them in the store. But don't forget to double-check all the Expo there. Sometimes things look different. When leaving the store be sure to check the products they have at a lower price for the second section of the items of opportunity. Sometimes they just don't have the original package. Another way to look at them is that you're not going to have any assembly problems just need a wagon to take it home). I live in an apartment without an elevator, so yes, I want to pay them to bring it home. If you cry a little they even transport these objects to the second possibility. Things you should have: BILLY (never enough) FIRA (never enough) glass on top of your desks to have fun! Alan Hochberg - Flickr CC Flat furniture package, like almost anything bought at IKEA, can be the perfect solution for many homes: It's cheap, easy, and usually easy to assemble. But even experienced DIYers can have a hard time navigating the rare instructions and confusing parts of the list they encounter. Here are some tips to help make collecting your new furniture as painless a process as possible. Advertising - Continue reading below 1 Make space you want a lot of open space to assemble furniture, and it's often much more than you think it will be. By giving yourself enough space, it's less likely you'll kick the pieces around and lose them. If you need more space, consider building furniture in another room than where it will be used, but make sure it can fit through the door when finished. 2 Take an inventory Take an inventory of all the pieces and items of your new furniture before you start building it. Keep all the small details in your plastic bags and don't open them until you need them. Use a small plastic box to keep the pieces organized to prevent them from falling off the table or getting lost. 3 Collect your tools Most instructions will indicate the tools you need, and even include Allen wrenches and small screwdrivers. It is usually best to use your own as you will have a better handle and the tips will be sharper. (Pro-tip: drill/driver with Allen wrench bit can make Ikea Ikea build ton easier-just keep these RPMs low.) 4 Layout Everything as you take inventory of all parts and parts, lay out everything in separate areas and keep similar pieces together in the same heap. 5 Follow the instructions Carefully Give instructions a quick look to help organize the parts and then follow them exactly step by step. If something doesn't make sense to you, read ahead as there is always a reason why the piece should be built in the first place. 6 Double check to reread all the instructions and double check your work. This will save you the pain of reworking something before it's too late. 7 Review online resources Many furniture companies have videos and frequently asked questions on their sites that are useful. Check there as well as DIY message boards before you call in for help. Or, if you need inspiration, check out Ikea Speed Builds and YouTube and wonder how quickly someone can assemble a Borgsj desk.
