It is a system that automatically controls fuel injection. There is usually no need to depress the accelerator pedal when starting the engine. The starter should not work more than 15 seconds at a time. To prevent the battery from leaking, wait a few seconds between attempts to restart the engine. 1. Make sure that all passengers are properly wearing seat belts. 2. While the brake pedal is depressing, press the accelerator pedal halfway and hold it there and then crank the engine. Release the accelerator pedal immediately after the start of the engine. 3. If the engine still does not start, the engine may be flooded with too much gasoline. While the brake pedal is depressing, press the accelerator pedal all the way down and hold it there and then crank the engine for 5 to 6 seconds. Return the ignition switch to off or LOCK position and release the accelerator pedal. Wait a few seconds and then crank the engine again for 5 to 6 seconds, bending the brake pedal but not pressing the accelerator pedal. Release the ignition switch if the engine starts. If the engine does not start, repeat these procedures. Mitsubishi Outlander is a crossover by Japanese automaker Mitsubishi Motors. It was originally known as the Mitsubishi Airtrek when it was introduced in Japan in 2001, and was based on the Mitsubishi ASX concept car, exhibited in 2001 at the North American International Auto Show. It was sold at the Mitsubishi Japan dealer network under the name Car Plaza. The ASX (Active Sports Crossover) represented Mitsubishi's approach to a broad industry crossover trend to maintain the all-season and off-road abilities offered by high land clearance and all-wheel drive, while at the same time offering car-like emissions levels, economy and size. Original name was chosen to describe the vehicle's ability to transport its passengers in an adventurous packed journey in a free way, in a way was invented out of the air and Trek to express the idea of footloose, adventure-filled automotive pleasure. Replacing his sign Outlander evoked the feeling of traveling to distant, uncharted lands in search of adventure. The second generation of the car was introduced in 2006, and all markets, including Japan, adopted the name Outlander, although production of the old version continued in parallel. It was built on the company's GS platform, and used various engines developed by Mitsubishi, Volkswagen and PSA Peugeot Citroen. The Citroen C-Crosser PSA and Peugeot 4007, which were manufactured by Mitsubishi in Japan, are icon-engineered versions of the second generation Outlander. Global sales reached the milestone of 1.5 million units in October 2016, 15 years after it was launched on the market. As part of the third-generation Mitsubishi lineup, Mitsubishi launched the Outlander PHEV hybrid model in January 2013. Total global sales passed the milestone of 200,000 units in April 2019, and according to JATO Dynamics, Mitsubishi Outlander PHEV is the best-selling hybrid in the world since December 2018. As of 2019, Europe is the leading market with 126,617 units sold until January 2019. The Outlander PHEV was the best-selling plug-in electric car in Europe in 2014 and again in 2015, and ranks first in Europe as the best-selling hybrid car in Europe for four consecutive years, from 2015 to 2018. Both in 2014 and 2015, it also ranks first in the world selling plug-in hybrid, and as the third best-selling plug-in car after all electrics Tesla Model S and Nissan Leaf. 2008 Mitsubishi Outlander II 2.2 (133 cui) 3 photos 13 service books 7.64 l/100 km Performance 115 kW (156 hp) at 4000 rpm.
