The Gatwick Airport Guide provides detailed information on the characteristics, policies and procedures of the airport. It complies with all applicable requirements and conditions of the EASA airfield certificate. The guide describes a systematic approach to the operation of the airfield, demonstrating our commitment to the safe and efficient management of the airfield. While accountability is at the top of any organization, it is important that everyone understands their responsibilities and accountability, as defined in leadership. The airfield guide is divided into five parts: Part A - General Part B - Airfield Management System, qualification and training requirements Part C - Features of the airfield part D - Airfield features must be reported to the Aviation Information Service Part E - Features of the airfield operating procedures, its equipment and security measures View or load the airfield guidance Please pay attention to this very large file. The Gatwick Airport Guide provides detailed information on the characteristics, policies and procedures of the airport. It complies with all applicable requirements and conditions of the EASA airfield certificate. The guide describes a systematic approach to the operation of the airfield, demonstrating our commitment to the safe and efficient management of the airfield. While accountability is at the top of any organization, it is important that everyone understands their responsibilities and accountability, as defined in leadership. The airfield guide is divided into five parts: Part A - General Part B - Airfield Management System, qualification and training requirements Part C - Features of the airfield part D - Airfield features must be reported to the Aviation Information Service Part E - Features of the airfield operating procedures, its equipment and security measures View or load the airfield guidance Please pay attention to this very large file. Since 2010, the Agency has prepared implementation rules, acceptable implementation standards (AMC) and relevant guidelines (GM) for the airfield area. At the same time, the EASA Airfield Group has prepared certification specifications (CS) for the design of airfields based on ICAO 14. With regard to The Commission (EU) Regulation 139/2014, we cover and develop the following areas: airfield design and safety equipment; airfield operations, including apron management and ground control services; Airfield operators; airfield of supervisory bodies. For a more detailed overview of all EASA airfield-related rule-making tasks, you can refer to the current European Aviation Safety Plan (EPAS). From 2018 on, the section is also visiting EASA member countries and, ultimately, those who have working relationships with Europe. This work is based on The Implementation Commission (EU) Regulation 628/2013, as in all other areas where EASA conducts standardization visits. To identify airfields within the scope of EASA, please refer to Article 2 (e) (e) of the Regulation (EU) 2018/1139 Contact If you wish to contact the Airfield Standards and Implementation Section (FS.2.4) team, please use the forms Contact us. Form.
