Seth Godin, whose conversation is as smooth as his head, speaking on 99 Percent ConferencePhoto: Jared Goralnick When You're Preparing a Speech, says marketer Seth Godin, Don't Remember Your Conversation. Remember your stories. Ten stories make the conversation. This is actually how most stand-up comedians build their routines. They don't write jokes as much as they re-tell them over and over again. Each time they concentrate on communication with the audience, and they do not allow words to put in the way of the performance. You don't have the luxury of practicing your speech in front of a live audience night after night. But you already have, in your everyday life. When Godin asks for your 10 stories, he doesn't ask you to invent 10 new ones, but to pull out of the stories you're already talking about, or write about, or otherwise share with people. Stories of any mini-speech that you find yourself giving often, to a few people because you care about them. This applies to workplace conversations or stories you tell your friends. So choose from these stories, and practice telling them again. You don't have to memorize words, just ideas. Choose which parts are interesting enough for a large group and which you should skip in that particular delivery. Then when you're on stage, you won't need to keep the whole script in your head. All you have to remember is what familiar stories you choose to tell. You'll be present more. You will be able to connect with the audience and adapt to their reactions as you would in a smaller conversation. And you'll sound like a professional speaker. The clumsy memorization of the Seth Blog by Google Keep Notes is one of the simplest and best free notes taking apps on a mobile phone. It's available on Android, iOS and through your web browser. The app has recently changed from just Google Store to Google Keep Notes. The app is otherwise the same, however. This is just a small renaming from Google. It seems like a simple note taking app to the surface. However, it has a ton of fun with few features and lots of extras for your convenience. Let's see how to use Google Keep Notes. You can download the app to your Android device with the button just below. Download Google Keep Notes from Google Play! What is Google Store Notes? Google Keep Notes is a note-taking app. This is directly related to the Google Drive experience. However, unlike most Google Drive, Google Keep Notes is its own experience. So you can't access notes from the Google Drive app as you can Google Docs, sheets or slides. Notes consume your Google Drive space. However, since they are so small, you will probably never notice. The app was launched on March 20, 2013. It has since undergone Evolutions. This includes the aforementioned name change, various user interface updates and changes, as well as various improvements to function features Supplement. It currently has over 100 million downloads on the Google Play Store. There is also a web version, an extension of Google Chrome, as well as mobile apps for Android and iOS. The app has a simple user interface, lots of simple customization features, and support for Google Wear OS. This easy behavior makes it snappier, the heavier the note-making. It also has some of the best cross-platform support for any note-taking app on a mobile phone. Finally, the app is completely free without in-app purchases, subscriptions or premium versions. Let's see how to use it! How to use Google Keep Notes: Basics Give a start with some basics. This should get your foot in the door and you're rolling with Google Keep Notes. How to create new notes: You can create five main types of notes in Google Keep Notes. These include a regular text note, a note to the list, a handwritten note, a voice note and a note with a camera. The lower bar of the main screen provides quick shortcuts to make all five types of notes. You can start typing in the location in the bottom line to create a normal text note. Each icon on the right creates a different kind of note. They go in order to list notes, handwriting notes, voice notes, and picture notes. Just click on one of these icons to start creating a note. If you create a new handwritten note, the app will automatically space at the bottom of the screen if you need it. You can access Google Keep, keep.google.com and take notes on the website version just like the app. The web version includes notes to images, lists, regular text notes, and hand-drawn notes with your mouse. Your stylus or finger can also be used if your computer supports it. You can also install a Google Chrome extension for Google Keep Notes. It's a bit fussy, but it's, in fact, take note. Finally, Google Keep Notes has native support from Google Assistant. You can ask a Google assistant to take note, and this note should appear in Google Keep. A neat feature for this is to create a note shopping list in Google Keep Notes. You can then ask the Google Assistant to add items to the shopping list, and he'll populate the note with those items. You can share most things on Google Keep to keep them as notes. This includes links to Google Chrome, images from your gallery app of choice, etc. Just select Google Keep from the menu of shared data of this app and it will create a note! The main organization of notes: You can organize notes in a variety of ways with Google Keep Notes. However, the main method is to list on the homepage. Here you are interact with most of your notes. You can arrange notes on the homepage by clicking and holding on to a note. It pops up and you can drag it up or down the list at your leisure. You can also attach notes to the top of the list if necessary. You can achieve this long clicking on the note you want to pin. Once it is selected, a number of icons appear at the top of the screen. Choose one that looks like a push code and Google Keep will pin that note at the top of the list. It's easy! Google Keep Notes also uses tags to organize notes: the retractable menu has a tagging system. It is available by sliding to the left side of the screen or by clicking the Keep icon in the top left. You can create, customize and organize your labels there. Adding notes to labels is easy. Open any note you want to add to the label. In the bottom right corner of the note there is a three-point button. Click on it, select the label option, and then select the label you want the note to be on. Once you've tagged the notes, you can only quickly access these notes by opening the Google Keep Notes menu and selecting the label. Then it shows you all the notes under this label. How to make copies, delete, share, or archive notes in Google Keep Notes: Yes click any note to select it. From there, you're looking at the three-point menu button in the top right corner of the screen. This menu allows you to make a copy, delete a note, or archive a note. You can also share notes with other apps. Enter the note, click the three-point button in the bottom right corner. From there, select the Send option and then send through other apps. The information contained in the note is then sent to any app you choose. Change the colors of the notes, collaborate with your friends, and change the layout: you can change the color of any note in two ways. First, short-pressed any note to get into editing mode. Hit the three-point button in the bottom right corner and the color palette will appear at the bottom of the screen. The second method is to press the note for a long time until it is selected. The palette icon appears on the top bar. Click it to change the color this way as well. Google Keep Notes contains collaborative notes. You can add friends or family members to any note, and anyone can edit them in real time. To do this, open the note and put in a menu button of three points in the bottom right corner. The option of a collaborator will appear on the menu. Just add them with their email address and they can use that account to access the note with you. Users can customize the basic layout of Google Keep Notes with a box icon in the top right corner. You have only two options. First, it's a more minimal method that shows one note at a time in the list. The second shows two notes side by side in list format. Choose the one that suits you best. The advanced features of Google Keep can actually do a little more than just take notes, and has a bunch of extra features for other uses as well. How to use Google Keep Notes: You can add reminders to your notes. Reminders make notes pop up whenever you need it. This feature can be used in two two First, by long-pressed the note and then by clicking on the bell icon (plus sign). You can also log in to an individual note and find a finger icon there. Reminders can be set by time and date. You can also have a note reminder repeated at regular intervals if you want. This allows Google Keep Notes to function as a very easy to-do list application. You can also set reminders with the location as a GPS reminder. This pops up a reminder when you reach a certain destination. You can access it just as you can regular reminders. Just click on the seat at the top of the reminder box when it pops up. Google Keep Notes needs location permission to use location reminders. Denying your app location permission prevents location reminders from working, even if you do so once they've been created. Transcribe notes into text with OCR: In Google Keep, take a picture of the item with the words on it. Open the picture note and click on the image. In the top right corner, click the three-volume menu and select Grab Image Text. Google Keep Notes adds text from the image to the note itself for future links. Export Notes from Google Keep Notes on Google Drive: There are two main ways to do this. One of them is in the app and the other is on the web version of Google Drive. The version of the app is easier. Long click the note from the homepage and click on the three menu points at the top. There is a way to copy to Google Docs. Click on it and wait for the process to be completed. The other way is a little tricky, but it allows you to type information from a note into Google Doc. Open Google Doc in your computer's web browser. There should be a Google Hold icon in the right box. Click on it. From there, you can click and drag notes into Google Doc. Google Drive copies text and formatting (if it's on a list format) in Google Doc. You should be able to do basically everything in Google Keep Notes now. We will update the list as Google continues to add new features. Of course we want to hear from you as well! What features do you use the most and, as always, let us know if we missed anything! No problem! figures of speech pdf notes download
