June 18, 2019 When you have someone in your life who likes to do home projects or a professional Kreg KMA2700 Accu-Cut Circular Saw Track is the perfect gift. I chose this product for my husband, who is both a professional and a home project enthusiast. When he unwrapped his gift, he noticed that it was one of the best gifts I received him. Which is very important. The Kreg KMA2700 Accu-Cut Circular Saw Track is made of high-quality aluminum with dimensions of 27.5 x 8.8 x 2.5 inches. It is also equipped with guided tracks that are anti-slip and anti-chipping that can accommodate both the left and right blade of the saw. With the index to stop the built-in you can make almost perfect incisions and cross segments on the tree that are up to 48" inches long. Because of these features, why do you effectively eliminate cleavage, which can often be problematic when using a circular saw for a project. In addition, it is designed to be portable, making any project where you use a circular saw, just do and do it right for the first time. The creation of the Kreg KMA2700 Accu-Cut Circular is necessary for every do-it-yourself or professional/reenator. The price makes it perfect for gifts. Helpful? February 8, 2019Buy-Cut is nothing short of awesome! I am a self-proclaimed DIY-er, and will try anything that can make my job easier, less time and look better. It comes out about 48 inches, which was short for my pergola board, but my support I use made I have to move my board anyway, so I just adjusted the other end of the board and it lined up perfectly. I've never tried anything to put out a Kreg, but this machine is life-changing for someone like me. When I got it, I was in the process of creating pergola and not very good at math I spent a lot of time measuring over and over again to make sure I was doing it right. I drew lines all over my boards and literally made a mess out of them. The thing eliminated so much that nonsense. You just level the saw in the guide, clip it track line on track with tiny marks (as you would with the ruler) and it directs your seen all the way without moving or shifting. It's that simple! The guide eliminates cleavage on some forests as well. Being a DIY-er I don't tend to buy expensive stuff, so that was a real bonus for me. I wasn't sure about any part of the clip, but it never budged when I used it. Since then I started the bookshelf and the parts I need to make the table. I'm no longer afraid of some parts of the process because this product takes a lot of hassle. I will definitely invest in other Kreg products. Helpful? January 28, 2019This a very useful tool for making accurate cuts with a circular saw. It's done. it's heavy aluminum, not flimsy. My father has one of them and he loves it, he said you'll never do cutting again, and it's very easy to use. You'll have a straight, accurate and spinter-free cut. This can be used for rip cuts, cross cuts and angular cuts or any angle. I like that you can use this with a left or right saw blade. This track is up to 48 inches cut. It has a versatile sled, the precision saw track directs the saw easily along the cut line. I like that it has anti-chip and anti-slip bands that create shard-free cuts and keep the track without clamps. There are 2 tracks and each one is 26.5 inches long. It also has a starter unit that aligns and supports your saw. It is not recommended for saws with a plastic top blade guide. This product is made in the United States. I recommend it because it makes your designs a lot easier with accurate abbreviations. Helpful? January 27, 2019Creg Accu-Cut is a very convenient accessory to easily cut plywood in a straight line. The assembly was simply attaching two parts to create a cutting rail. The circular saw is attached, screwing it on a sleigh. Using is very simple as it is designed to set up by aligning the track with the cut line. There are guide strips that keep the track in place and the anti-slip coating. It can also be used to make incisions on a material that does not have a flat edge. There is an anti-chip feature that prevents the split as well. It breaks easily enough to be pretty portable. Kreg Accu-Cut will work for beginners. This would be heavily influenced by those who do not work in trade but have household projects that they want to solve on their own. Professionals will benefit too by being able to rip right through their stuff without worrying about following the cut lines on their own. Overall I would recommend this product to anyone who finds themselves in need of a quick and easy way to cut down on most types of materials. I used it with panels, board floor, plywood and composite material with great results. Helpful? February 14, 2019This system was put to work. It was very easy to assemble. It seems to work with most circular saws. I have three different ones and they all fit the piece that holds them. The track is only four feet away, so you may need to buy chunks to extend it if necessary. The track does not come with clamps or any way to keep it up to the tree. If you push too hard or fast on a saw, you can go offline quite easily. Take it slow and steady to provide perfect results. Unfortunately, you can't use any quick clips to keep track because they will put in the way of the saws. What I end up doing another straight piece of wood and put it next to the track and clamping it. It worked well, but if you don't have a lot of excess space on the piece you're cutting, this can be a problem. Overall, it is a very good product and when you consider the price, great value for money. Other similar products sell for \$600-\$1000. It's worth it for A woodworker will definitely recommend for someone looking for a reasonably priced track. Helpful? March 30, 2019If you like to do personal projects involving wood, it will come in handy, aku-cut will help you make straight cuts. As long as you already have a circular saw, you can take a saw and turn it into a rail system that will accurately make straight cuts, it comes in 2 pieces that are rail, and sleigh. Sledge, as a base, this part is fastened directly to the circular saw using two screws. The rail system is made of aluminum and at the bottom of the track, there are pads to help keep the rail in place until you make the cuts so it doesn't move it looks like the length of the rail is about 50 inches. It was very easy to use because there is a starter unit to help align all the bases included in the rail system and the pad at the bottom of the rail did a great job keeping it in place when using it. I think it will be very convenient for a person who likes to work with wood from time to time. So, yes, I would recommend this product as I find it very easy to use. Helpful? March 27, 2019Kreg KMA2700 Accu-Cut was selected through the Wal Mart Spark program in exchange for my honest opinion. This is great for some crafting projects I wanted to do. The first was to get a welcome wooden sign to place behind my front door. Cutting plywood has just become the easiest thing to do ever with this handy little tool. When I got it I was like what I suppose to do with this and now I have to buy a saw to go with that. It seems compatible with most saws, so if you have one, I would recommend you trying to plug that one before buying a new one. It's super easy to use. Look home Depot, you don't need for simple, small projects anymore. Not with this handy tool that is. There are guide slips and anti-slip coverage so there's no need to worry about any of those things happening. It seems portable so moving it from place to place shouldn't be a problem and shouldn't store it either. Definitely, I recommend. Helpful? March 15, 2019After the review is on Kreg KMA2700 Accu-Cut love DIY projects for my home, and recently we have taken on the huge task of replacing all the bedrooms, corridors and closet floors. I am confident in 99% of the skills needed to succeed. However, my lack of straight lines. I tell you, I was so relieved to learn that there is an accessory combined with our skill saw will deliver not only straight lines but angels as well! I'm not a carpenter, A very ambitious man who likes to knock out projects... so the following is based solely on my experience. Experience. Charm. I experience a bit of slip, however, that can be easily solved with a couple of clips at both ends. Absolutely love the guide. Again, straight lines aren't my strong point, but helping tracks help reduce my anxiety and stress, and my lines have proven great. Just the heads we work with the vinyl boards - the lines are good, clean and most important straight. When laying the floors we had to cut the strips, which were about 2 to 3 3/4 inches wide and along the entire length of the board- No problems with the Kreg KMA2700. Corners - I have a fireplace that requires angle cuts to get around - Easily knocked out. I'm sure there are still a lot of things that I miss, but it basically comes down too... I am very pleased my Kreg KMA2700 has been very helpful during this project and I definitely plan to use it for my future projects. Helpful? February 2, 2019It works well to make a straight line, but there are a few things you should know before buying this that I didn't know and I wanted to know before I did. allows you to start assembling. direction pretty straight forward, about seven or so steps to get started. It can mount the left or right hand of the saw and it doesn't matter which side your saw engine is on either. It also doesn't matter if your saw has a curved edge on a metal plate around the blade or not. The track is easy to assemble and made to be able to be spaced for storage. It can also be used with a kreg rip-cut so if you have that you can use it, it's not included. Rubber tracks keep it in place, so that the movement is impossible, the saw slides smoothly on the track as well. You will have to trim the track before use, and then the saw the blade should be installed at 1/8 inch. well that's what they don't say, the very first thing in the directions is that your saw should have a metal top guard not plastic, because the blade can move a little bit and you might not get a straight cut. well I used plastic that seemed to cut pretty straight. The other thing they leave to complete to assemble is that it works best with 40 tooth saws. What the heck?? Why was it the last time you told me that? I have 18 tooth saw. I do not buy one just for this thing. I couldn't cut through a small piece 2 by 4 with my saw. well this is something I pick up, I thought it would be great to use the site areas, but perhaps my miter saw still the best use. Helpful? February 7, 2019Kreg KMA2700 Accu-Cut is a great addition to our home garage workshop. It serves as a more cost-effective option for those individuals who may not want to invest in a full saw track. We felt as if Kreg Accu-Cut was meeting all our needs. My First uses it to cut plywood, and the cuts go straight and accurate. He recently used a used Kreg Accu-Cut cut a piece of plywood in order to make a new top of the bench and commented on how clean the cut was and it didn't split. Accu-Cut is easy to manage and doesn't require clamps to help us with a circular saw. Double slip strips have an anti-slip coating as well as a function to make breakaways without incisions. We like that the Kreg Accu-Cut is super portable so we can move it easily if the size of the tree requires it. My husband noted that he particularly likes the saw base and dwell on it as most saw tracks don't have this function. This is a great tool for a beginner or professional to add to your collection. Helpful? Collection. Helpful? accu-cut circular saw guide track system - kreg kma2700
