MyKODA App is a mobile app that will help you in a variety of everyday situations, connected not only with your car. You can have a digital version of the car guide, a lot of instruction videos, you can match the app with your favorite dealer and use different services. Body style: Wagon (wagon, wagon, combi, touring) Segment: Medium Czech automaker Skoda has just turned its sports model towards the avenue of electricity with the fourth generation of its performance model, Octavia vRS. They even called it an IV, instead of a simple 4th or IV. And it's not just a hybrid, it's a plug-in hybrid. It is the kind of vehicle that can steer petrolheads towards electric mobility. The first three generations of Octavia vRS were mostly gasoline turbocharged engines, and it was a cheaper alternative for hot hatches, but packed into a more practical body. Now it's not that cheap anymore, but it's more practical. Under the hood, the Skoda installed a 1.4-liter TSI engine with a capacity of 150 hp. In addition to this, the 85 kW electric motor helps things up to produce a total combined power of 245 hp and 400 nm (295 lb-ft) of torque. Transmission on the front wheels only through the 6-speed transmission DSG (double clutch). But performance is not so impressive. In fact, since it's a plug-in hybrid, and it's heavier than the previous generation, it's much slower. The 0-100 km/h (0-62 mph) sprint is now in 7.3 seconds, compared to 6.8 seconds for the previous generation. The top speed is currently 225 km/h (140 mph), which is 25 km/h (15.5 mph) slower than the Octavia vRS of the 3rd generation. But it's more economical. If it counts on a gas tank. 18 Photo Power (kW) 180 kW horsepower 245 hp Horsepower 242 hp Rev. at Max Power 5000 - 6700 Torque 370 Torque (pound-foot) 273 Rev.
