The WiFi Hacker Simulator App is a joke app that gives the impression that you can hack the Wi-Fi network. This joke app creates the illusion that it can hack secure wireless networks protected by WEP, AES or WPA2. It doesn't really hurt or break into wireless networks. But it is an amazing tool to impress your friends and with whom you can have fun. This makes you look like a competent pirate and a technical genius. It is a very charming farce to play on your friends. How to use it: This tool has a wireless network scanner (wireless scanner) that can detect all Wi-Fi hotspots in range, with good or bad signal. The wireless networks you discovered appear on the Wi-Fi identifi list. Choose the ID of one of the wireless networks on this list. Once the simulation of the hacking generated the fake password will appear as if the target network had been robbed. See how your friends are surprised by your hacker talent and enjoy! DISCLAIMER: Once again, as above, please remember that this app is not a real pirated tool. The passwords displayed are randomly generated. To truly hack the network is illegal and immoral. If you like this app, we rate and maybe write us a few lines. Your comments will be appreciated.
