Essential PDF supports the conversion of HTML to PDF with the webKit advanced rendering engine. This converter can be easily integrated into any application on .NET platforms such as Windows Forms, WPF, ASP.NET, ASP.NET MVC, and ASP.NET Core to convert URLs, HTML strings, SVG and MHTML into PDF, as well as to convert other formats such as HTML to MHTML, HTML to SVG and HTML to image. WebKit rendering is accurate, and the result saves all the graphics, images, text, fonts, and layout of the original HTML document/web page. It does not require external dependencies such as browsers, printer drivers or viewers. The prerequisites for the Windows Latest WebKit HTML converter can be downloaded from the link below. Supports Conversion from .NET Framework 2.0 and .NET Core 2.0. To convert HTML to PDF in an application, you should add the following builds or NuGet packages as a reference to the project using the WebKit rendering engine. Build .NET Framework syncfusion.Compression.Base.dll Syncfusion.HtmlConverter.Base.dll .NET Core Syncfusion.Compression.Portable.dll Syncfusion.HtmlConverter.Portable.dll Platforms .NET Framework Binaries is available at the established location of the WebKit HTML converter ($SystemDriveFiles Program (x86)Syncfusion-WebKitHTMLConverter-xx.xx.x\htBinaries). The physical path of this folder should be installed on WebKitPath property WebKitConverterSettings. This is a must-setting of WebKitPath property with a tBinaries folder. If WebKitPath isn't mentioned, put the tBinaries folder in the project bin folder, otherwise the converter will drop that WebKit builds are the missing exception. .NET Core tBinariesDotNetCore is available at the installation site WebKit HTML converter ($SystemDriveProgram Files (x86)Syncfusion-WebKitHTMLConverter-xx.xx.x\htBinariesDotNetCore). The physical path of this folder should be installed on WebKitPath property WebKitConverterSettings. It is a must to customize WebKitPath property with a folder tBinariesDotNetCore, otherwise the converter will throw WebKit builds with no exceptions. NuGet's aforementioned NuGet packages are available in the nuget.org .NET Framework Platforms in the package is available in the tBinaries folder. Set the way for the tBinari folder from package location to WebKitPath ownership of WebKitConverterSettings. It is a must to customize WebKitPath property with a folder of tBinaries, otherwise the converter will throw WebKit build no exceptions. .NET Core tBinariesWindows is available in a set package location. Set the way of the tBari folder from the location of packages to WebKitPath property It's This. install the WebKitPath property with the tBinaries folder, otherwise the converter will drop the WebKit build, there is not enough exception. The redistributed HTML WebKit version also requires the redistribution of VC-2010, and must be installed in the machine where the conversion takes place. Please use the below download link to get the installer. x86 - Instead, the necessary builds can be placed in the Windows system folder (for a 64-bit machine, it should be a place in the $SystemDrive-Windows-SysOW64 and for a 32-bit machine, it should be a place in the $SystemDrive\Windows-System32), MSVCP100.dll MSVCR100.dll OPENSLL for conversion sites, HTML converter requires THE OPENSLL library to be installed in the machine where the conversion is taking place. OPENSLL libraries can be installed by downloading its settings from the below links, instead, the build below can be placed in the Windows system folder (for a 64-bit machine, it should be placed in $SystemDrive-Windows-SysOW64 and for a 32-bit machine, it should be a place in the $SystemDrive\Windows-System32), libxay32.dll libssl32.dll sslay32.dll Prerequisites to convert Linux support from .NET Core 2.0. The latest WebKit HTML converter for Linux can be downloaded as a file on the following link: To convert HTML to PDF in the ASP.NET Core app using WebKit rendering, add the following builds or NuGet packages as a link to the project. Meetings 1. Syncfusion.Compression.Portable.dll 2. Syncfusion.Pdf.Portable.dll 3. Syncfusion.HtmlConverter.Portable.dll 4. The WebKit HTML converter is available at the installation site. The physical path of this folder should be installed on WebKitPath property WebKitConverterSettings. This is a must to customize the WebKitPath property with the tBinariesLinux folder, otherwise the converter will throw WebKit build no exceptions. To convert HTML to PDF to Linux with the WebKit rendering engine, the following packages must be installed in the Linux machine where the conversion takes place. libxdr apt-get update $sudo apt-get-set xvfb $sudo apt-get-set libssl1.0-dev $sudo apt-get-set libx11-dev libx11-xcb-dev libxcb-icccm4 libxcb-image-dev libxcb-keysyms1-dev libxcb-randr0-dev libxcb-render-utl0-dev libxcb-render0-dev libxcb-shm0-dev libxcb-util0-lib-dvexcb-xfixes0-dev libxcb-xkb-dev libxfixes-glibc libxrandr-giant libxrandr-dev The prerequisites for Mac conversion support from .NET Core 2.0. The latest WebKit HTML converter for Mac can be downloaded to the PKG file at the following link: To convert HTML to PDF in the ASP.NET Core app with the WebKit rendering engine, add the following builds or NuGet packages as a link to the project. Meetings 1. Syncfusion.Compression.Portable.dll 2. Syncfusion.Pdf.Portable.dll 3. Syncfusion.HtmlConverter.Portable.dll 4. The WebKit HTML converter is available at the installation site. The physical path of this folder should be installed on WebKitPath property WebKitConverterSettings. NuGet Syncfusion.HtmlToPdfConverter.tWebKit.Net.Core qBinariesMac folder is available in HTML for the PDF Converter NuGet package set to place. The physical path of this folder should be installed on WebKitPath property WebKitConverterSettings. It is a must to customize webkitPath property with a qBinariesMac folder, otherwise the converter will throw WebKit build missing exceptions. URL in PDF To convert the URL of a website or local HTML into a PDF using the WebKit rendering engine, please refer to the code below. Make sure the OPENSLL builds are configured properly to transform https sites. For more information, please refer to the preconditions section. Initiate HTML HTMLToPdfConverter htmlConverter - the new HTMLToPdfConverter (htmlRenderingEngine.WebKit); WebKitConverterSettings Settings - New WebKitConverterSettings Set WebKit path settings. WebKitPath - Wz/Binari; Assign WebKit html HtmlConverter.ConverterSettings settings and settings; Convert the URL into PDF PdfDocument - htmlConverter.Convert (); Save and close the PDF document. Save (Exit.pdf); Document. Close (true); 'Initiate HTML for Pdf converter Dim HTMLConverter as the new HTMLToPdfConverter (HtmlRenderingEngine.WebKit) Dim settings as the new WebKitConverterSettings () 'Set WebKit Path WebKitSettings. WebKitPath - /tBinaries/ Assign WebKit settings to HTML converter htmlConverter.ConverterSettings - Settings Convert URL to Dim PdfDocument as PdfDocument and htmlConverter.Convert () Save and close the PDF document. Save (exit.pdf) document. File return (stream, contentType, fileName); There are no builds in WebKit exception builds when there are no WebKitPath sites in the location. Solve Set the Way of the BINARY folder to WebKitPath WebKitConverterSettings property. No, no, no. Place the zBinari folder in the project bin folder. (This option is only applicable to .NET Framework projects. WebKitPath property must be explicitly installed for .NET Core projects.) Web programs will be available at a designated location WebKitHTMLConverter (\$SystemDrive-Software Files (x86)\Synfusion-WebKitHTMLConverter.x.x\ntBinaries) Displaying web applications c//To designate websites from project location settings. WebKitPath - Server.MapPath (TBinaries); or / Refer to web files from the project settings bin folder. WebKitPath - Server.MapPath (Ben/zBinari); Exception Can't download DLL 'Synfusion.WebKitWrapper.dll'. This module could not be found. The reason why the redistribution of the 2010 HCSS is not present in the machine where the transformation takes place. The decision to install VC and OpenSSL packages from the download links mentioned below, X86 - X64 - Instead, the necessary builds can be added to the Windows folder. (for a 64-bit machine, it should be a place in the \$SystemDrive\Windows-SysWOW64 and for a 32-bit machine, it should be a place in the \$SystemDrive \Windows-System32), MSVCP100.dll MSVCR100.dll Synfusion provides a troubleshooting utility tool to clear out the missing premise. The tool is available in hml converter set location: (\$SystemDrive Program Files (x86)\Synfusion\HTMLConverter\x.x.x\WebKitUtility) If the HTML converter installer is not installed in your machine, you can get a utility troubleshooting tool from the following link, Troubleshooting Tools Step to run the troubleshooting tool. Start an app to fix a problem from your HTMLConverter location or from your download folder. Download and extract Walker dependency files in this root directory. If you need to find a problem of lack of dependency. Click Check requires to begin the analysis needed to convert HTML to PDF using the WebKit rendering engine. By checking all the requirements you need, you can find success and failure categories from the troubleshooting result window. Finally, troubleshooting logs will be stored in the text file at the app's folder location. You can check logs with problems and solutions. If the solutions provided don't solve the problem, please contact Synfusion support with log troubleshooting and a screenshot. Please follow the manual troubleshooting instructions below. WebKit Converter can create a PDF with blank pages in the following cases Reason when a web page (html) is not available/available solution Please check your Internet connection and if the HTML page is available at the mentioned location. The reason why the OpenSSL package is not installed in the car. The HTTPS conversion solution requires the installation of OpenSSL libraries in the machine. The OpenSSL library can be installed by downloading its installation from the below link, OpenSSL Instead, the necessary builds can be added to the Windows system folder (for a 64-bit machine, it should be a place in the \$SystemDrive\Windows-SysWOW64 and for a 32-bit machine, it should be a place in the \$SystemDrive\Windows-System32), libeay32.dll libssl32.dll sslseay32.dll Reason When OpenSSL (libssl) common objects are not added to Linux pre-3.0 or higher. To convert https sites to Linux docker 3.0 or higher, the HTML converter requires that shared OPENSLL (libssl) objects be placed in the \Binaries\Linux folder. OPENSLL shared object files can be downloaded from the following link, LibSSL Instead, the above attached common object files can be copied into this Linux system folder /usr/lib/x86_64-linux-gnu using the team below in the docker file. COPY /libssl/ No images or other content in HTML are released as a result of PDF The cause of the problem may be due to a slow internet connection or because of behavior that the conversion is completed before the page is fully loaded. To overcome this problem, add a suitable delay to convert using the AdditionalDelay HTMLConverter property. The reason when converting html line to PDF is the invalid resource path (Basic URL). The solution to this problem can be overcome by passing a valid base URL (resource path) along with the HTML line. HTML conversions can't be released on Azure's website, but it works in a development machine. HTML conversion for reasons may fail on the Azure website due to lack of admin privileges and several other restrictions on azure's free or general hosting plan. To overcome this failure, use a basic hosting plan or above. If a website is already hosted as part of a Free or Shared hosting plan, you can scale it to Basic or above on Azure. Support for converting HTML to Azure Azure App Service Yes (except for the free/general plan) Azure Functions Yes (except for the consumption plan) Azure Cloud Service Yes Issue could not convert the exclusion of the web page into a server cause If the Synfusion.HtmlConverter.Base.dll is locked in the machine, the converter may make this exception. The solution is to unlock the assembly if it is blocked, referring to the following screenshot of Synfusion.HtmlConverter.Base.dll. This exception can occur if builds and web sites are used from different versions of WebKit installers. The solution is to use Synfusion and qBinaries builds from the same WebKit setup, as there will be some changes to the builds and qBinaries for each release. Builds and websites for a particular version can be obtained by installing a WebKit HTML converter. WebKit HTML Transformer: reason for converting HTML to PDF, WebKit HTML internally creates temporary files in the temp folder for conversion. If the time folder doesn't have an enhanced resolution for the user concerned, the WebKit HTML converter can make this an exception. The default WebKit HTML converter gets a system timeline to create temporary files for conversion. Please refer to the following examples of the default time folder. C: Users User_Name AppData.Local-Temp C: WindowsTemp Make sure that previous paths have increased resolution for the appropriate user. No, no, no. WebKit HTML has the support to set up a time path. Using the TempPath property, you can install any folder path that reads/writes/executes permission. The converter then uses this path to create temporary files. Check out below code to set the temp folder. C. WebKitConverterSettings Settings - New WebKitConverterSettings Options. TempPath - D://MyProject/bin; Cause Sometimes an exception occurs even if the user has an increased resolution resolution Try placing the app in another server user account and check the conversion. WebKit HTML can make this an exception if the web application is published in the overall location of the network. To avoid this exception, post the app on the local server drive where it will be hosted. Please do not publish a website for the overall location of the network. The reason WebKit engine rendering internally creates a surrogate process in a time folder (temporarily performed with a different name for each conversion) and launches it to convert HTML into a PDF. In this way, the converter requires permission to read/write/run a time folder to perform a temporary executable code. The server can block temporary runs due to a third party group policy/software. The time path may not have the necessary permission (read/write/perform). The 1.Temporary execution solution may be on the white list on the server as follows: Set the folder path on the server as a temporary run path by installing the TempPath WebKitConverterSettings property and adding the folder's path to the third-party group/third-party exclusion list. c//Set a temporary pathway to create temporary webkitConverterSettings.TempPath - C:/HmlConversion/Temp/; Set a name for what you're listed on the server by installing the TempFileName WebkitConverterSettings property and add that name to the list of third-party group policy/software exceptions. c/Install a temporary file name to create temporary webkitConverterSettings.TempFileName - Synfusion; 2. Include permission to read/write/run a time path for the relevant group. Reason Sometimes this exception only happens for a specific URL solution Please contact Synfusion support with HTML input, code snippet, and data environments (OS, culture settings, bit version, etc.). etc.).
