Wed., Oct 11, 2016 at 12:20pm This is an absolutely outstanding product. We have used ours on 3 different trips now through different weather conditions and we absolutely love it. Most of the things about Vango Kela are very positive, but there are a few niggly things I would change about it if I could. Read on to find out more. We actually bought our second hand from the Facebook group for camper owners. We paid 240 pounds overall, including the inner carpet. The retail price would otherwise have been around 570 pounds for the same thing, which to be honest, I think is absolutely worth it. With everyone going campervan crazy during the summer, especially during the Covid crisis, there may be deals that will be available in markets such as and Facebook groups. Make sure you keep an eye on them! How does it look like to be back on the menu - How long to build Vango Kela? Thanks to the AirBeam structure created it's actually very easy to erect. Wango claim that it takes 8 minutes to erect. Here's a timelapse of us putting it up: Erecting a Vango Kela I've never had much camper before buying a camper and this tent, so putting up Kela was a very new thing for me. My first port of call tends to hit the internet and search for some instructions to see how to put the tent up. However, on my first attempt we were camping on Dartmouth in Devon and I didn't have the internet available to help me with the instructions. It's not too much of a problem. It took much, much longer than I expected, and certainly longer than Wango claimed it should take. It took me almost an hour to deliver it on the first attempt. The second attempt took 30 minutes. Then I had aha moment and realized that I still haven't watched the instruction video on how to erect it. I decided to follow the instructions on the third attempt, which took only 20 minutes from start to finish. To clarify, The erection of Vango Kela involved the following: Getting Kela bags out of bootTaking all the awnings and goodies from his bags (it's actually quite hard work because it packs so tightly into the bag) Pegging down the ground to 2x AirBeamsConnecting to the van through the driveway of the awning kitPegging down all the pegs of the hammer, etc. However, I think you should be absolutely flying to do it in under 10 minutes. Box Content By the time I'm erecting the awning, I tend to have music in the background and beer in hand, so I'm happy enough with 20 minutes@ back on the menu - Is it easy to pack away? Vango Kela is easy enough to pack. It doesn't eliminate the fear that haunts you until it's up though! Or is it just me that hates the thought of putting the tent away?! It will take us about 30 minutes on a good day to pack everything back in the right bags and into our transporter. If it rains and everything is soaking, add on an extra half hour for the extra annoying bits that follow. For example, making sure that the sheet is not touching our fabric back of the bed RIBA so that it doesn't dirty it. Things like that. The dual-action pump that is enabled has a very handy deflate setting. It's incredibly handy when you want to squeeze every drop of air out of the AirBeam system to make it easier to pack away. Here's a timelapse of us taking Vango Kela down - it takes about 30 minutes. Back to the menu - Stacking from Vango Kela in your camper when stacked away, Vango Kela takes up the same amount of space as a large holdall. Vango Kela in the back of our 60 plate Transporter You can see Kela stacked on the bottom shelf at the back of our Above. It weighs 18.40 kg, so it's not too heavy, but not exactly trivial either. back to the menu - How many people can sleep in Vango Kela? This was a hot topic during a recent visit to West Wales with some of our friends (couple) who stayed at Kela for 2 nights. Official documentation for Vango Kela says it's two berths. I would freely agree with that, but caution him and say it's a very generous 2 berth. We had a double blast bed there and there was enough room for extra luggage and things next to this in the living compartment. I think on a push you could jam 5 or 6 boozey people out there for the night! Back to the menu - What you get with your purchase Included in the purchase of Vango Kela you get: Vango Kela driveway awning and carry bagCamping pegsDouble action pump and carry bagVango sheet Be warned that it does not come with a driveway awning kit. To do this, you're going to need something like this. Keep in mind though - these kits come in different sizes (3mm-6mm) - so make sure you buy the right one. He also does not come with poles to erect an external porch. Back to the menu - Conclusion to conclude this low review of Vango Kela from the prospect of campervan owner, I would say this is the perfect driveway awning. It's big enough without being too big. It's easy to erect. It fits to take up relatively little space. It looks great. It's a great quality from a reputable brand. The only downside, and it is a personal preference, is that the front entrance (with a porch covering) is 90 degrees to the front of the van. There is an entrance that stands just like the van we use all the time, but it doesn't have porch cover unfortunately. 9 Overall score We recommend this for couples and families alike. A wonderful product that is quickly put up and outstanding quality. PROS Price quality Easy to erect a quick erect of The Stous away easily Add your review changed to: St. 23 January, 2019 at 3:08 PM PLEASE find an attached PDF pitching instruction for Air Away Kela Tall /Standard (2014) Did you find it useful?
