Written by a leading expert in this field, this report focuses on bringing together two major trends in information management - big data management and information management - by adopting a strategic approach focused on business cases and industry imperatives. With the advent of new technologies, enterprises are expanding and processing very large amounts of data; the book, which is non-technical in nature and is business-oriented, encourages the practice of establishing good management of big data initiatives and examines big data management and management, emphasizing relevant processes, procedures and policies. It teaches readers to understand how big data fits into a shared information management program; Quantification of big data business value Apply to big data concepts such as management, metadata and organization structures; Assess broad business benefits for different industries and employment functions; Selling the cost of managing big data to businesses and creating step-by-step processes to implement big data management. Comprehensively covers the evaluation criteria and capabilities of the software available for data management programs, which are often used by programs such as Microsoft Excel and Microsoft SharePoint to document and share data management artifacts. But these tools often don't have critical functionality. At the same time, providers are ripe for their data management proposals to the point where today's organizations need to see tools as a critical component of their data management programs. In this book, data management expert Sunil Soares examines the architecture of corporate data management (EDM) and discusses key data management tasks that can be automated with tools for business glossaries, metadata management, data profiling, data quality management, data management, reference management, and information policy management. Subsequent sections describe the integration points between EDM tools and data management and explore how management tools interact with big data technologies, including Hadoop, NoSQL, streaming computing, and text analytics. The final section of the book examines the criteria for evaluating data management tools and provides an overview of key vendor platforms including ASG, Collibra, Global IDs, IBM, Informatica, Orchestra Networks, SAP and Talend. Founder and Managing Partner, Information Asset, LLC Sunil Soares is the founder and managing partner of the consulting firm Information Asset, LLC, which specializes in providing organizations in the development of their information management programs. Prior to this role, Sunil was Director of Information Management at IBM and worked with clients on six continents and in various industries. Sunil has published a book called IBM Data Management Single Process Process in detail fourteen steps and almost a hundred tools for the implementation of the information management program. The book is currently in second print and translated into Chinese. Sunil's second book Selling Information Management for Business: Best Practices on Industry and Feature Job Reviews is the best way to approach information management by industry and function. Sunil's third book, Big Data Management, will address the importance of managing information for different types of big data, such as social media, machine-to-machine, big transaction data, biometrics, and human-generated data. Sunil's Twitter handle is @sunilsoares1 Sunil has also worked in financial services strategy consulting practice for Booz Allen and Hamilton in New York. Sunil lives in New Jersey and holds an MBA in Finance and Marketing from the University of Chicago Booth School of Business.
