This video shows the HP Pavilion g6-1000 series disassembling and cleaning the fan. If the laptop overheats while working and abruptly shuts down, it is most likely an overheating cooling system. The reason for this is the accumulation of dust on the radiator. If you don't clean the cooling system in a timely manner, it can damage your laptop. You can fix this problem by repeating the procedures shown in the video below. Disclaimer: This information is provided only for informational purposes. We do not accept responsibility for the damage caused to your device by following the video instructions. Also note that if your laptop or any other device is still under warranty, the warranty can be lifted during the dismantling process, as the tracks remain after the disassembly and this violates the terms of the warranty period. Make sure the warranty on your laptop is over before disassembling. If you're doing a laptop showdown for the first time in your life, look out for this tutorial - First time repair.
