Managed access limits your device to one app and lets you control what features are available. You can enable controlled access when you allow your child to use the device, or when random gestures can distract you. Go to the availability settings and then turn on the managed access. Click passcode Settings and then click Set a managed access password. Enter the password and then re-enter it. From here, you can also turn on Face ID or Touch ID to end a managed access session. Open the app you want. On the iPhone X or later, triple-click the side button. On the iPhone 8 or earlier, click home three times. If you want parts of the screen to stop responding to touch, use one finger to get around those areas. You can move or want to use a circle, or click X to remove it. Click Managed Access and then click Start. Or to start a manageable access session with Siri, open the app you want and then tell Siri to turn on the controlled access. Siri features can vary by country or region. To disable features or set a time limit, click the Side or Home button and then tap the options. If you don't see the settings, press the Side or Home button again three times and enter the password. Turn on the options you want and then click Finish. Sleep/wake button To disable the Sleep/Wake button on your device, turn off this button. The volume buttons to turn off the volume buttons on the device, turn it off. For example, the screen doesn't react when shaking, and the screen won't rotate no matter how you hold the device. Keyboards To turn off the keyboard so that it doesn't appear, turn it off. Touch If you want your device to ignore the touch of the screen, turn it off. Lookup Dictionary To use Look Up function when choosing text, include this. Time limit to select time limit for Managed Access session, include this. Press the Side or Home button three times, enter the Guided Access password, and then press End. Or if you've turned on Touch ID or Face ID for managed access, double-click Side or Home. Thank you for your feedback. Today's children usually like to play mobile phone games and spend a lot of time on the phone. Unfortunately, they can find their way to other sensitive content and personal data stored on your iPhone. Some parents believe that disabling Wi-Fi or cellular data will prevent them from spending time online. However, this doesn't stop them from accessing other apps and parts of your iPhone. If you experience such problems, iPhone Managed Access is here to offer you a solution to this problem. Than Access on iPhone? The iPhone's controlled access feature is an accessibility feature that disables all gestures, clicks, buttons and any other action on your iPhone beyond those required for your current app. In other words, it allows you to access one app. If your child is trying to allowed app and try to open other apps or going to another part of the iPhone, he or she will be stopped. If they try to press the Home button, they will have to enter a four-digit code to disable the managed access feature. How do I use controlled access on my iPhone? Managed access can also be used to customize the guest mode on your iPhone. This means that with this feature you can easily transfer the device to someone else to use it without worrying about them being snooped through your personal information and files. How do I enable controlled access on my iPhone? Step 1: Open the Settings app on your iPhone. Step 2: Click on the overall availability of zgt; availability. Step 3: Click on the controlled access found in the Training section on your iPhone. Click on the switch switch to enable controlled access. Step 4: Click on your password settings. Step 5: Tap the access option, managed by access, and then set the password. Step 6: Turn on the availability label by switching the switch to On. This allows you to press the Home button three times and then enter controlled access whenever you want. How do I turn on Touch ID for managed access? iPhone's Touch ID lets you access your device without having to enter a password. All you have to do is place your authenticated finger and the iPhone opens itself up. If you use this feature to unlock your device, you can also use it for managed access. It's perfect for parents with smart kids who can remember your password. Step 1: Open the settings of the 'gt;General's Availability of The Managed Access of the Step 2 Password Settings' Settings: Click on the Switch, which is next to Touch ID, to activate it. How do I start managed access on my iPhone? To start using Guided Access, you need to run it. Once you've turned on this feature, you can start using it. Here are steps on how to use this iPhone feature: Step 1: Run an app that you would like your child or any other user to have access to. Step 2: Press the Home button on your device three times to run the managed access feature. Step 3: Circle any areas or apps on the screen that you would deny access to. Step 4: Tap the options in the bottom left corner of the screen to see if you want to share other features, such as the Sleep/Wake button, touchscreen function, motion sensor, and volume button. Once you've made a choice, click on Ready to Save. Step 5: Tap the Start button at the top of the screen to start controlling access. How do I turn off controlled access to my iPhone? You can decide to terminate managed access at any time. However, in order for you to do so, you'll have to follow the following steps: Step 1: Triple Click Home or Side Step 2: Enter password with managed access Step 3: Click on the end of the option to stop managed access. Options Options Manage to sleep/wake access button: Turn off the Sleep/Awakening button so your kids don't accidentally press the button to block the screen. Volume button: When you set up the Managed Access feature, you can switch the volume button, and this will prevent other users from increasing the volume of the device. Motion: Turn off the device's motion function, and the screen will not respond to the iPhone gyroscope sensor function. However, if your kids are playing motion games don't switch this feature. Keyboards: Switch keyboards and prevent access to the keyboard when using a locked app. Touch: When you disable Touch, it will prevent the touchscreen from responding to any activity on the screen. Lookup Dictionary: Once the Lookup dictionary function switches, no one will be able to use this feature to find the dictionary meanings of certain words. Time limit: You can also decide to turn off the Time Limit feature, which is set for managed access. No one can change this limit no matter what if they don't have a password to your device. Bonus. How to avoid privacy leaks on my iPhone? Instead of going through all the problems of turning on and off managed access, you can just use iMyFone Umate Pro. This is the best way to protect your privacy. With this software, you will be able to constantly erase these sensitive materials from your device, and no one will be able to access them. 1,000,000 Download Key Features: Protect Your Privacy by deleting some sensitive data and making it completely unrecoverable. You can view and delete data files that have already been deleted and make them 100% unrecoverable. This helps protect your personal information including contact photos, messages, chats, call history, videos, data viewing and any other sensitive content on your iPhone. This allows you to erase all your messages and all third-party app attachments including WhatsApp, Kik, WeChat, Facebook Messenger, Viber and more. A large number of professional software review sites recommend iMyFone Umate Pro for privacy protection, including MacWorld, iPhoneinCanada, APPKED, etc. Step 1: Download, install and open iMyFone Umate Pro on your computer. Then connect your iPhone to your computer. Step 2: Choose a personal data erasure mode and then click on Scan for the software to start scanning the device. Step 3: Preview and select the data you want to permanently delete. After the scanning process, the software will display all your personal data and you can choose files that you don't want to have on your device. Step 4: Once you've selected the files for Click on the Erase Now button to start erasing your personal data all the time. Opened a YouTube video for your kid and found them by mistake surfing Amazon a few minutes later? Or unlock your device for some work and and time looking at the pictures? We've all been there, so setting up and using managed access to iPhone and iPad running iOS 13 is a wise move. Managed access is an accessibility feature that restricts users to one specific application. They can't switch to another program or return to the home screen during the Guided Access session. You can also control which features are on or off. You can use settings for any app, whether it's streaming video, games, music, writing or reading. How to use managed access on iPhone and iPad Once enabled, Managed Access has endless uses, some of which may include: Preventing children from jumping apps or accessing other content without permission To keep themselves from being distracted by other apps or notifications Pro users can avoid removing accidental or such incidents caused by inadvertently touching the screen Providing employees in restaurants, libraries, etc. do not abuse their devices. So let me see you through the whole process. Fast access: Set up managed access on iPhone and iPad Step #1. Start the Settings app on your iOS device and click Accessibility. Step #2. Scroll down and select Control Access Turn the switch next to it. Step #3. Turn on the switch next to the controlled access. Once enabled, you are familiar with several options, choose settings that meet your requirements. Let's check them briefly: Set a password: Click on your password settings, and either choose a set of managed access codes or switch to Face ID or Touch ID. Set deadlines: This feature allows you to set a sound/alarm to notify before the end of the set time. Click Time Limits → sound and then choose your preferred sound. You can also force the device to speak the remaining time of managed access. To do this, click Time Limits → switch next to Speak. Include Shortcut availability - If enabled, you'll be able to access the feature with a simple triple tap to the side button or home button. Simply switch to a switch next to Shortcut's availability for seamless use. For automatic locking, you can also change the iPhone lock time during the Guided Access session. By default, it adapts to settings that are active on Auto-Lock in Display and Brightness. You can adjust the time to suit your convenience. Special tips: Make sure your biometric authentication is enabled and prevent locking yourself, in the case of a forgotten password In my experience, allowing Shortcut access makes using the function pretty simple How to use managed access, Pro on iPhone or iPad Step #1. Open any app on your iOS device (in this case, the YouTube app). Step #2. Now use the House/Side button if you've turned on the accessibility shortcut during Siri's call to the Enableable Access button. Step #3. On this screen, click on the options from the bottom left corner and switch off to the feature function Your Preferences: Sleep/Awakening or Volume Buttons: Choose whether you want these buttons active or disabled during a controlled traffic session: Turn/disable the switch between portrait and landscape or from responding to other keyboard movements: To stop/allow The entry of Touch: Ignore or take all screens touches the time limit: Set the time after which the app will stop working the Lookup dictionary: (only available for the relevant apps) to include #4/ Step #5. To disable the app's controls and specific areas of the app's screen, roughly draw the outline of the section. Step #6. Click Start to start a managed access session. And so, your session began. Now, anyone who tries to leave the app will have to enter a password to do so. Note: Your device will remember the settings and settings chosen for each app. So you don't have to install controlled access every time, you can just start a session and block your iPhone in this app. How to edit a managed access session to edit or end the current session, press the home side button three times or ask Siri. Enter your password and click Summary or End accordingly. If biometric authentication is enabled, you can use Face ID or Touch ID for the same thing. Isn't the function just great? Steve Jobs once said: Our job is to figure out what they want before they do. These features in my iOS device are a great example of mood. I couldn't have thought about blocking the feature. Although, after using controlled access on my iPhone and iPad, I really need this feature a lot. Feel free to block yourself in our iOS app or website as we have fantastic content for you: you:
