Image: Pathum Danthanarayana (Unsplash) Not all of us are lucky enough to have unlimited data plans that can cause a lot of anxiety around rationing monthly allocations for web browsing, streaming video, and other mobile activities. Going to the data limit costs a fortune and it can be difficult to keep track of where all this data went. Recently, some Android users have been hit with overage charges thanks to their Google News app using a ton of data in the background, The Verge reports. In some cases, this bug has cost users hundreds of dollars in their accounts, and the only way to solve this problem is to disable background data or delete the app. Whether or not you use Google News, you probably have apps on your phone that eat up data, even if you're not actively engaged in it, and it might cost you. To check the use of the data, go to the Device Settings app and tap the web and internet data. Here you can see how much data you used over a period of time. If you have a pen to use, you have several options for controlling the selection. Some features may only be available on Android 8.0 and above, according to Google.Set up alerts and restrictionsIf you're worried about apps sucking up all your data without your knowledge and then get hit with a big score- you can turn on notifications that will alert you when you've reached a certain level of usage or adjust restrictions that automatically disable mobile data. To set up alerts, go to the Network Settings and the Internet's mobile data zgt; set-up. Hit data alert, enter a megabyte or gigabyte threshold at which you would like to receive a notification and click Set.The data restriction feature is also located under the mobile data zgt; Settings. Turn on the Set data limit, tap the OK data limit and enter the megabyte or gigabyte limit where you want your data to be automatically disabled. Click Set.Restrict background data for a specific appsAnother option is to limit data for individual applications. This means that apps may not work as expected, you won't receive push notifications, for example, but it can prevent them from eating up all your selection data when you're not using them. In some cases, you can limit the use of data in the app. Otherwise, open the settings and go to the Network and the Internet to use the data to use mobile data. Scroll down until you find the app you want to limit, tap the app's name and turn off the background. Mobile data is completely This may be a last resort if you are out and about, but if you are able to connect to a Wi-Fi network you can disable mobile data. To do this, go to the Network Settings and internet data and tap mobile data. Finally, if you want to make sure that the app doesn't use data in the background, as is the case with Google News, you can delete it completely. Whether it's your Android Android has an amazing camera or mediocre, there are many apps in Google Play that will help you take the best photos with it. We believe that the FX HOOM camera is the best of these options, not only because it packs powerful features, but it will help you learn how to make better photos as well. The FX camera is still our favorite camera app for Android, but it's been a while since we reviewed its features, tested the competition, and explained why it's still our choice for the best you can get. The SUOM FX camera has grown a lot over time, and while the competition is strong, we still feel it deserves a nod. Here's a fresh look. Camera zUM FX Platform: Android Price: \$2.99 Download PageFeaturesAuto-Focus and click on focus modesHardware customization options, Including white balance, night mode shooting, ISO, focus accounting, exposure, contrast, saturation, and more (as long as your equipment supports it) gesture and multitouch support, including a pinch to zoom in, click to focus, and click to shootBurst shooting mode, which supports up to 20 shots per secondCustomizable mesh attachment (so you can use the rule of the third Horizon level indicator (never to be photographed again)Stable shot meter and shooting mode (with crosshairs, That flash red when the camera moves)Setting all the hardware buttons on your phone and assigning them to camera functions, such as zooming in on volume-controlled time spans for shots and long exposures ofSelf TimerVoice and sound-influenced triggers: Clap or speak to take a photorear and control shutter ControlOver 40 different photo filters and effects such as sloping shifts, vignettes, LOMO, retro, toy cameras, and PolaroidDozens photo presets for one-touch personalizationReal-time digital zoomGeotagging photos using your phone's GPSPreserves EXIF and other metadata with your photosAutosave images when you take theirLive previews of photo effects and filters before applying themSt any editing tools, including so you can build an instant collage of photos that you just take , Twitter, Flickr, and moreDownloadable leather packs, borders, frames, props, shutter animation, and other additionsTho it excels camera zUM FX is even more packed with features and photo tools now than it ever was. The app does a great job giving you end-to-end photo shooting, editing and sharing experiences where you can use the app to take great photos, edit and touch them the way you like, add effects and others and then share it online or with friends on Twitter, Facebook, or any other app that you want to click on the photo. Even if you don't use editing or customization features, it's still a fantastic camera app, packed with composition, composition, Audio-controlled and customized modes to help you take the best photos with your Android device. These are the composition tools that really send the FX camera over the top though. Many camera apps have stickers and frames and filters, and that's fine if you like to use them, but it will actually help you build the best photography habits by teaching you the rule of thirds, looking for a golden ratio in your shots, or by helping you make sure you level with the horizon. A stable shooting mode will make sure that none of your photos are blurred or poorly focused, and click on focus ensures that you always highlight the object you want to be in the spotlight. Best of all, each of these features is so easy to use it's refreshing. A lot has changed in the world of android camera applications since we originally crowned Camera S'5 FX as our favorite, but what hasn't changed is the developer's commitment to adding new features, improving existing features and updating the interface and layout of the already great camera application without dropping support for old devices and various hardware. The FX OM camera is still the winner, and is usually a bargain (it's often on sale at least 40% off), and a huge improvement over almost any stock camera app. We keep trying other apps and we still think it's one of the most powerful. Where it falls the short camera of the zUM FX is great, but it's not perfect. It's long been missing HDR mode, as some other camera apps have stepped up to turn on, and it can't take panoramic shots even if your hardware supports panorama photography. It's a bit of a bummer, but given the widespread support for OS apps (Android 1.6) that may have something to do with it. However, given other camera apps definitely have these features, it's a bit of a thorn in the side to find them missing. It's important to remember that the FX CAMERA is at best a replacement camera app, even if it's trying to do a little bit of everything. What it does, it does well, but if you're looking for all the filters and tons of photo effects for what's available here, you'll have to look at some of the apps below. Similarly, if you want more detailed editing and post-processing features, you should look elsewhere. Both of these things are OK though, since we're talking about the camera app here, not the personalization app or photo editor. The FV-5 camera contest (\$4, Free Lite version) has been around for a while, but only recently it's gotten good enough to really pay attention to and the boy did it get it good. It packs in tons of features, and developers have moved on to adding useful camera features over filters and effects. You can hardware settings such as white balance, exposure time, diaphragm, light meters, and so on, and the viewfinder even has an RGB histogram right there, updating in real time. You will be All the other useful features from the other apps here too-tilt-shift shooting, auto-focus and click on focus, long exposure support, work. Its only drawback is that the interface can be a bit overwhelming as a result of all the features. The vignette (\$3) is still around and kicking, and it's a great option if you're looking for an elegant shooting interface and more filters and post-processing effects than you can shake the stick on. It looks great, it's a joy to use, and can do a lot of other apps here can do, including tilt shift photos, cross-process, duotone, LOMO, toy camera, and more. The only downside to vignettes is that, being elegant and useful, it's also a little easier on features and shooting modes. Still, if other camera apps are overkill but you still want to step up from the stock, try it out. Cameras360 Ultimate (Free) grew out of the old Camera360 app, which was most notable for its HDR shooting mode. The latest version so far has it there, along with some other useful features such as photo effects, fast sharing, support for Sony's phone-mounted lenses, and a very easy-to-use interface. The interface is great at guiding you straight to the type of shooting mode you may want, but the problem with the app is that it's gotten progressively bloated and bogged down with features that aren't too useful and have little to do with taking good photos-just gimmicky ones. It also got to be the biggest of storage pigs, weighing in at 21mb. The focus camera (free) we mentioned earlier is better known as the camera that used to be complete with CyanogenMod. It's available now as a standalone download, and packs features such as HDR shooting, panorama shooting, photosphere, explosion shooting modes, self and auto timers, and more. This little buggy on some devices is definitely still a beta, and doesn't support anything running less than Jelly Bean 4.2, but if you need HDR or panorama, it's more than worth a look. Android (4.1): Focus, the camera app from CyanogenMod, is a pretty powerful photo and video with More Your Camera default app slightly different on each phone (Motorola will be different from HTC, which is different from Samsung and so on), but overall they don't offer a ton in the way of power. Some are better than others, and include a tap-to-shoot or tap-in focus, and some even give you these delicious equipment settings like white balance control and exposure times, but they're often buried in menus if they're there at all. They will do as a last resort, and while they are definitely a competition, their only advantage is their simplicity (which is nice, sometimes). It's obviously not just the camera apps out there, but they, are the best. If you use one we didn't mention, please share it with us in the comments. Also, be sure to check out our list of the best photo apps for Android for more Application. The camera in your Android device can range from exceptional to scary, depending on the model... Lifehacker's App Directory is a new and growing catalog of recommendations for the best apps and tools in a number of these categories.
