PULSE TO DEPLOY HUMAN OCCUPATION MODEL: THEORY AND APPLICATIONThis another great resource to know the basics of occupational therapy, this publication is based on the most commonly used conceptual model, MOLD (Model of Human Occupation), where it develops it on a theoretical, practical level and presents the latest lines of research. It includes images, diagrams, photographs and a very good table of therapeutic reasoning where the MOHO model is developed by scientific data. It has 566 pages. Written by Kilhofner. Editorial: Pan American Medical.My as a therapist: During his career there are many references that they have done so and other books about MOHO, but in my humble opinion it is one that presents and details it in more detail, and more rigorously, since the book is written by the creator of the Mojo concept, Kielhofner, with a number of clarifying comments. Content index. PULSE TO DEPLOYSECTION I. INTRODUCTION IN HUMAN OCCUPATION MODELPART I. Explanation of HUMAN OCCUPATION PART II. Application of MOLD: therapy process and therapeutic reasoning. TABLEPART III: Assessment Tools: Structured Methods of Receiving Information from PART IV Customers. Part V. Examples of Resources for the Application and Development of MoldDownloads TEST CHAPTER. PULSE TO DEPLOYIn pediatric occupational therapy we have several options from which to draw the necessary knowledge to combat children and affection that they can present or what are the best stimulation methods and scope that the therapist should know. In childhood, the plasticity of the brain is unique throughout a person's life and allows you to apply a variety of techniques for the correct development of abilities and skills, with the help of these books you will have the opportunity to learn them thoroughly and through playful activities and incentives to support and improve the development of the child with the affection of the profession that he has. If you're thinking about studying child-therapy or just your work in the field, take a look at this list. These are books that have a great bibliographic interest for a professional therapist. And besides, most books allow you to take a look at its contents thanks to the free PDF that we've added. OCCUPATIONAL THERAPY IN CHILDHOOD: THEORY AND PRACTICE The baby develops due to its neurological plasticity. This book describes the evolution in how the baby's world is perceived, how it affects his motor, psychological and social development, and how occupation stimulates its autonomy in all areas and in his daily life. In case you have any motor, sensory, developmental or intellectual affection or disorder, the ways of solving them are shown and the intervention of the occupation to facilitate them as much as possible. And in what area can these methods be developed by a professional (neonatology, early assistance, primary care, school...) It has 412 pages. Authors: Bego'a Polonio, Ma Cruz Castellanos, Ina Viana. Editorial: Pan American Medical.My opinion as a therapist: I had the opportunity to have this book for a few weeks for some articles that I had to develop and its clearly defined breakdown of areas of affection and above all the introduction of stimulation techniques in the most common areas of the therapist's work has been very helpful. I don't quite like the wording of some chapters because of their density of concepts that may have escaped this chapter, but it's very personal and that meets each author's criteria. Content index. CLICK TO UNWRAP SECTION IA: CHILDHOOD AND DEVELOPMENT 1. Contextual considerations in childhood. Introduction to child development. 2. Sensorium-motor development in early childhood. 3. Psychological development: affective, cognitive and perceptual development. 4. Social development and children's play. 5. Language development. SECTION 2A: OCCUPATIONAL THERAPEUTIC METHODOLOGY IN CHILDREN 6. Therapeutic process in pediatrics. 7. Some interventions in occupational therapy in childhood. Personal autonomy and the activities of everyday life. 9. Educational and therapeutic psychomotivism. Body diagram, laterality, space and time. Expansion and alternative communication. 11. Schooling: Pre-writing and Writing skills. Graph and drawing. SECTION 3A: PROFESSIONAL INTERVENTION IN CHILDREN AS YOUNG AS 12. The main components of occupational therapy are applied to children. 13. Professional intervention for sensory-motor disorders of predominance. Professional intervention in developmental disorders. Professional intervention in intellectual disability. Professional intervention in social issues. SECTION 4A: AREAS OF ACTION17. Neonatological units. Early care units. Primary care. 20. School zone. Reception centres, housing and community resources. Associations and leisure clubs. APPS-1. Summary of terms and methods. The Convention on the Rights of the Child. 3. Professional assessment tools for children 4. Orthosis, technical means and adaptation of the home, school and social environment. 5. Occupational Therapy Research 6. Associations and links of interest. Download THE TEST. PULSA TO DEPLOYMethodological works on pediatric professional intervention at a theoretical level in its first chapters. They are very focused on the theoretical basis of occupational therapy in pediatrics along with theoretical models such as human-environment-occupation or Canadian performance. He then moves on to practical methodology with explanatory examples on mental health, parenting and underage and how to evaluate various professional areas, agility, development ... All this is documented and supported by case studies of mental health, rehabilitation, education, both in the children's and at the youth stage. It has 318 pages. Authors: Maria Angeles Domingo. Editorial: Synthesis.My opinion as a therapist: I see it The book is more focused on training professionals and therapists practicing their work in the pediatric field on technical details, especially in the first half of the book, but it can also give a practical and close vision to the student who needs to see with examples of the theoretical application he receives. Download the full INDEX. PULSE TO DEPLOYThe development of a child in their daily life as occupational therapy can assess their good health in this area. Dr. Mulligan's book instructs us on the tools that a therapist can use to verify multiple sources of information that come from a child to know areas that may have problems. It is student-oriented because it is considered a comprehensive and practical guide to assessing a child based on concepts included in the American Professional Therapy Association (AOTA). His bibliography is very complete. That's 369 pages. Authors: Shelley Mulligan Editorial: Panamericana.My Opinion as a Therapist: This is a very graphic and instructive book. It uses very didactic numbers and boxes, where I myself, when I was a student, had flexible access to practical examples from which to extract references and methods of action in order to evaluate and treat the most appropriate action plan. It uses the framework of American action and the terminology that are the basis at the international level. Content index. PULSE TO DEPLOYCAPTLE 1: PAEDIATRIC EVALUATION OF OCCUPATIONAL THERAPY IN DIFFERENT AREAS AND SYSTEMS OF PRACTICE INTRODUCTION TO EVALUATION. Clinical reasoning. Family participation in the evaluation process. Systemic considerations in children's assessment. Resume. Chapter 2: GUIDE FOR EVALUATION Stages of the Evaluation Process. Useful findings to consider in the evaluation process. Resume. Chapter 3: NORMAL DEVELOPMENT OF THE CHILD Principles and Development Theories. Children's activities. The development of motor skills. PULSE TO DEPLOYThe professional therapist in geriatrics is a very important figure as it works to improve the quality of life of older people and their caregivers. The book presents case studies, placing the reader in a theoretical framework used as a basis for intervention. These include case studies that you can see in the index of content below, such as immobility, loneliness, cognitive impairment, lctus ... Its presentation and description of cases is methodical, with photographs, images, exercises, guidelines and even medical tests such as X-rays illustrating and guiding the reader on the case. It has 372 pages. Authors: Bego'a Polonio, Pilar Durante Molina, Pilar Pedro Tarre. Editorial: Panamericana.My opinion as a therapist: In my personal case this book helped me as I developed my final degree work and especially in my first working stage, in which I spent several years in the geriatric field. I have seen the most common pathologies in the elderly and give it meaning that we sometimes do not give, and most importantly, how occupational therapy treats the disease together with the person who suffers from it. The book will help you choose the best benchmark in each case and model to choose from. This is a book where you clearly see direct attention to the person and prepare you so that you know how to address the case that you find, even if it is not the same as in the book. There seems to be a few printed copies left. Content index. PRESS TO DEPLOYSection 1a: Introduction 1. Clinical effects of aging. Presentation of the disease. 2. More frequent pathologies. 3. Geriatric care. The team and the role of the therapist. 4. T.O. process in geriatrics. Section 2a: Occupational therapy for major geriatric syndromes. 5. Clinical case of immobility. 6. Clinical case of fall. 7. Two cases of cognitive decline. 8. A case of home care modelled on human occupation. Section 3a: Occupational therapy for the pathology of the locomotive system. 9. Clinical case of osteoporosis with a fracture. 10. Clinical case of rheumatism 11. Clinical case of inflammatory rheumatism. Section 4a: Occupational therapy for other pathologies of high prevalence in the elderly. 12. Clinical case OF ICTUS. 13. Clinical case of Parkinson's disease. Clinical case of COPD. 15. Clinical case of cervical myelopathy. Section 5a: Occupational therapy in other cases. Clinical case of technical assistance and environmental adaptation. 17. Case from the model of adaptation by profession. 18. Innovative Gerontological T.O. Program: A municipal occupational therapy programme for people alone. Section 6a: Apps 1. Summary of used terms and methods. Grade Tools. This book is a must for those working in the geriatric industry. It contains all the decalogenous diseases and disorders that we may encounter when working with this age group. In the index below you can see how the route through affectations is completed and touch most areas in which occupational therapy can operate. There is no direct conversation about the methods or frameworks of the actions so, but it allows us to understand how these most common affectations work and then each therapist develop their own individual action plan. It has 420 pages. Authors: Federico E. Micheli, Manuel Fernandez Pardal, Maria Graciela Cersimo Editorial: Medica Panamericana.My opinion as a therapist: This book can be useful if you want to learn about human aging and what pathologies and affectations you will find at this evolutionary stage. In my opinion, if you don't know what dementia is, how and how they affect, or what kinds of disorders we can find about the nervous system, it will be harder for you to develop a treatment plan that is really effective in a person, so this book can be great called for you. Content index. CLICK TO DEPLOY PART I: NORMAL AGING AND COMMON CAUSES QUERY 1. Neurological manifestations of aging 2. Frequent advice of the elderly 3. Sleep Disorders 4. Headaches 5. Transfer problems 6. Dysphagia 7. Balance disorders, dizziness and tinnitus 8. PainPART II: COGNITIVE IMPAIRMENT AND DEMENCIA 9. Mild cognitive impairment (risk of dementia) 10. Cortic dementia 11. PULSE TO DEPLOYThis publication is one of the first to be written for professional therapists. Recommended for both students and therapists who need a reference system or guidance to work with this group of people. It also includes changes to the Social And Poor's Health Care Act and recommends how we can use the resources available to management to care for geriatric users. Contains a very thorough bibliography. It has 448 pages. Authors: Pilar Durante Editorial: Elsevier-Masson My opinion as a therapist: I only had the opportunity to use it for a case of a patient with severe dementia, but I realized that it covers a number of situations in which we can usually find ourselves as a professional profession, in which case it works the problem through occupational therapy techniques. Take a look at the index because this is a book that is quite possibly if I get the chance I will buy for my personal library. Content index. CLICK TO DEPLOY PART I. 1. The history of occupational therapy: its development in geriatrics. 2. Models for practice. The methodological aspects of intervention in occupational therapy. TNS method. Appendix 3-1. Guidelines to be followed during the evaluation process. PART II. 5. The psychological aspects of aging. Mental illness in old age. Health resources. The contribution of occupational therapy to geriatric evaluation. App 7-1. Standardized assessment tools used in gerontological occupational therapy. PART III. 8. Brain stroke. Appendix 8-1. Clinical case of stroke. 9. Osteoarticular Pathology. Appendix 9-1. A clinical case of osteoarthritis. 10. Violations of gears, falls and accidents. 11. Occupational therapy for Parkinson's disease. Appendix 11-1. Clinical case of Parkinson's disease. 12. Chronic obstructive pulmonary disease. 13. Peripheral vessels. Appendix 13-1. Clinical case of bilateral amputation of limbs. 14. Appendix 14-4. Schema possibly that can be used in day care services in psychogeriatrics. App 14-5. Rehabilitation of leisure: artistic activity. Appendix 14-6. Clinical case of frontotemporal dementia. Appendix 14-7. Inventory of routine occupational therapy tasks. Adaptation of RTI Allen (1985). Appendix 14-8. Functional plan of neuropsychology and occupational therapy. 15. Depressive disorder and anxiety disorder in an older person. Intervention in occupational therapy. 16. Immobility Syndrome. 17. Geriatric decline syndrome. App 17-1. A clinical case of decline syndrome. PART IV. 18. Occupational therapy in health and partner resources. Appendix 18-1. An example of fall prevention: the approximation of outpatient groups of integrated care and day hospital. 19. Homework at home. 20. Occupational therapy in residential centres and activation programmes. Appendix 20-1. An example of a form. Appendix 20-2. An example of a form to track a plan. Appendix 20-3. An example of an activity evaluation sheet. 21. Encouraging personal self-reliance and caring for people who are dependent: the role of occupational therapy. Appendix 21-1. In the example, use the Dependency Assessment Scale (BVD). PART V. 22. Mobility and headquarters. Extended and alternative communication systems. 24. Functional adaptation at home. App 24-1. An example of functional adaptation at home. Appendix 24-2. A guide to gathering information for functional adaptation at home. Appendix 24-3. Describing problems and solutions while in sensory-visual dysfunction. 25. Physical activity in the elderly. Alphabet Index. This book is divided into three parts. The first and second parts are devoted to talking to us about Parkinson's disease, its evolution, demographic aspects, how it affects the disease and its treatment. In the third part, he delves into Parkinson's, but with a professional therapy approach. This explains the various standardized scores, rating the batteries that are there to assess every aspect of the disease, and explains the different treatments that can be applied such as sensory stimulation, psychomotivism, body expression, virtual reality among others. It has 208 pages. Authors: Francisco Javier Cadeiro Ma'guire. Editorial: Elsevier.My opinion as a therapist: If they are your endeavors as a professional therapist and in your practice you have patients with Parkinson's disease, this book will help you better know the disease and its affection and know how to approach it as a therapist. It will also give you the tools to know how to implement good rehab treatment from occupational therapy. Is it easy to read a book, not very extensive, about 200 pages, very explanatory and easy to understand. One thing I also like is that each thematic chapter recommended a bibliography of the subject. There seems to be a few printed copies left. Content index. PULSE TO DEPLOYPART I: Introduction chapter 1 Introduction to Parkinson's disease. Historical Evolution Chapter 2 Demographic and Epidemiological Aspects of Parkinson's Disease 2. Occupational Therapy in Major Geriatric Syndromes. Chapter 3 Physiopathology of Parkinson's Disease Chapter 4 Consolidated and Experimental Pharmacological Treatments for Parkinson's Disease Chapter 5 Surgical Treatment of Parkinson's Disease Chapter 6 Cell Therapy for Parkinson's Disease: Present and FuturePart 3a: Occupational Therapy in Locomotive Pathology. Chapter 7 Sensory Stimulation as a Therapy for Parkinson's Disease Chapter 8 Virtual Reality: New Technology for Assessing and Treating Parkinson's Disease Chapter 9 Non-Invasive Transcranial Stimulation: Magnetic Stimulation and Direct Current Stimulation Chapter 10 Utility Physiotherapy in Parkinson's Disease Chapter 11 Changes in Communication and Swallowing in Parkinson's Disease. Speech Specific Intervention Chapter 12 Occupational Therapy in Parkinson's Disease Chapter 13 Cognitive Changes in Parkinson's Disease Chapter 14 Therapeutic Pool and its use in Parkinson's Disease Chapter 15 Parkinson's Association as a therapeutic resourceIn this therapeutic work we can find from conceptual aspects to tools for intervention in mental health from the perspective of a professional therapist. The advice book is as decalogue to different mental disorders, but also a clinical analysis tool by a collection of professional subjective studies collected. The contents of the book are supplemented by access to the website with various evaluation tools, links of interest, as well as various programs and resources for the care of a person with a mental disorder. It has 394 pages. Authors: Oscar Sanchez, Bego'a Polonio Editorial: Panamericana.My Opinion as a Therapist: Closely Related to Books on Geriatrics We Find Books on Mental Health. I used this book to learn about mental disorders during the development phase of my work, where I was in a sub-acute unit in St. Boy. This book helped me learn how to act from occupational therapy in cases of personality disorder and various cases of mental illness in adolescents. Adolescence is not an easy stage, let alone related to mental illness; Thanks to the book I had the tools as a therapist and I knew how to manage various cases that I found myself applying his clinical vision. It also helped me understand how mental illness affects a person, what affectations it causes and something very important, so I included this book in the first of this section, and it's therapeutic relationships in professional intervention. I leave you a video of Bego'a Polonio, the author of this and other books of my choice, where she explains in detail the contents of the book ... Content index. Negotiations on individual programs as a group: a practical example of 13.5. Applying theoretical approaches to occupational therapy in practiceIn this case we find ourselves before the guidance with which to delve into the latest research on occupational therapy studies in acquired brain damage. This is an area of activity that requires good specialization to be able to determine, depending on each case, the level of affection and how to operate the occupation in each case. This is a book of a wide range of action and a guide to occupational therapy in the field of acquired brain damage. It goes from conceptual framework, basics, comprehensive human evaluation, methods of intervention and therapist's tools to restore self-reliance and occupation of the person. It has 527 pages. Authors: Begonia Polonio Lopez Y Dulce Ma Romero Ayuso. Editorial: Pan American Medical.My opinion as a therapist: During my time in the ICTUS general hospital I had this book as a reference to assess cases that presented themselves as cognitive, sensory-motORIZED and psychosocial, and what might be the intervention methods that can best be applied in each case. This is a very specific book for acquired brain involvement, and if you are going to be in that area you will be a great partner in day after day as a therapist. Highlight self-assessment questions in the book, which forces you to develop critical analysis in the face of the case studies presented. Content index. CLICK TO REALLYSection 1. Psychosocial intervention in acquired brain damage: 28 psychosocial effects of brain damage. 29 Family and community intervention in individuals with acquired brain damage. 30 Working integration of a person with brain damage. 31 Leisure programs for people with brain damage. This is a book with an innovative format, spreading the content between physical books on paper and web content, with theoretical and practical material to expand and consolidate all the knowledge that the author, Bego'a Polonio, has for the occasion. He knows how to combine in the same work theory with clinical practice with various cases where you can observe theoretical models of application, methods and procedures, along with new used in occupational therapy in recent years from abroad. There are 22 clinical cases, eleven of which are allowed. That's 500 pages. Authors: Bego'a Polonio. Editorial: Pan American Physician.My opinion as a therapist: In my opinion, this is the best book about the physical effects that Bego'a has written, and while his clinical cases deal with the most common physical dysfunctions, in my humble opinion should have opened the fan more, since the area is considered somewhat biased, but it is also true that 22 cases can not say that they are small! I needed to consult with this book during my period in the gerontology field in the residence, and what I liked most was the importance given to the activities and occupation of the person. I recommend it for being a very updated edition, 2.015 and for ease, that the author has to convey his passion for occupational therapy and that we have the accompanying material at hand, both for students as well as for professionals. Content index. PULSE TO DEPLOYSection I. Basics of professional intervention in people with functional diversity of physical origin Chapter 1. The scope of action and the role of a professional therapist within the focus of a person with functional diversity of physical origin Chapter 2. Models and background frames are often used in physical dysfunctions of Chapter 3. Occupational therapy process in people with physical disabilities and chapter 4 service documentation. Use of activities and

activities in the treatment of people with physical disabilities Chapter 5. The impact of trauma and illness on a person. Factors influencing the result. The Process of Adaptation to DysfunctionSecse II. Principles of Evaluation and Treatment of Physical Origin Problems Chapter 6. Principles of evaluation and treatment of joint and muscle dysfunctions Chapter 7. Principles of Evaluation and Treatment of Engine Control Problems Chapter 8. Principles of Evaluation and Treatment of Perceptual-Sensory Problems Chapter 9. Principles of Evaluation and Treatment of Cognitive Problems Related to Brain Damage Chapter 10. Emotional overcoming and solving psychosocial problems Chapter 11. Approach to assessing and interfering with communication problems Chapter 12. Orthopedic treatment in occupational therapy Chapter 13. The use of neuromuscular bandages on the upper limbSeccia III. Principles of Productivity Assessment and Treatment Chapter 14. Everyday Life Activity Chapter 15. Functional Mobility and Translations Chapter 16. Support for Product and Auxiliary Technology Chapter 17. Innovation Occupational Therapy in Physical Dysfunction Chapter 18. Smart method for evaluating and treating people with severe physical and sensory dysfunction Chapter 19. Evaluation and Intervention Procedures: Reintegration Against Reorientation Chapter 20. Leisure programs for people with severe dysfunctionSeccia IV. Organization, marketing and bioethics in occupational therapy in physical dysfunction Chapter 21. New organizational models and strategic planning Chapter 22. Marketing and financial planning: resources, always meagre good chapters 23. Communication and Leadership Chapter 24. Bioethics and Professional Processes in Physical DysfunctionSecse V. Case Studies Solved Chapter 25. High spinal injury (tetraplegia) Chapter 26. Amputation of Chapter 27 of the Supreme Member. Multiple Sclerosis Chapter 28. Colls Break Chapter 29. Cardiorespiratorial Disorder Chapter 30. Robotic therapy with Amadeo® for Manual RehabilitationSection VI. Proposal to conduct case studies to address Chapter 31. Cranioccephalic Injury Chapter 32. Carpal Tunnel Syndrome Chapter 33. Side amyotrophic sclerosis Chapter 34. Parkinson's Disease Chapter 35. Section of the arm flexor tendons Chapter 36. Proximal fracture of the humerus is a test. PULSE TO DEPLOY is a book that examines advances in early and late neurorehabilitator treatment. It collects the most important therapeutic interventions to improve daily life after stroke and how to improve a person's skills. It has practical procedures to improve the autonomy of the patient, selective methods of movement flows. And a chapter to prevent side effects through the interdisciplinary work of therapists, nurses and families to avoid pain or loss of the amplitude of the joints. It has 544 pages. Authors: Patricia M. Davis. Editorial: Pan American Medical.My opinion as a therapist: I recommend your reading if in your therapeutic environment you are dealing with patients with hemiplegia, since the book has developed a very convenient way to act in these clinical cases. You will see the affectations caused by hemiplegia in a person and how to treat them from occupational therapy, because unfortunately we are currently seeing an increase in cases that represent this disease. It is a very illustrative book, with over 700 images that guide and easier shows the concepts described by Pat along the way. I also like that it will be a cross-publishing, as it integrates into the treatment, both physiotherapy and occupational therapy. Content index. CLICK TO UNWRAP1. which cannot be detected directly. Normal sequences of movements and balance reactions.3. Abnormal patterns of movement in hemiplegia.4. Practical evaluation, continuous process5. Acute phase-positioning and movement in bed and chair.6. Normalization of muscle tone and training of the patient in selective movement without unnecessary effort7. Re-transfer of equilibrium reactions in the seats and the sound signal8. The incentive to return activity in the upper limb and arm and reduce the associated reactions.9 Overwork of functional gait.10. Some activities of daily life11. Mattress activity.12. Shoulder problems associated with hemiplegia13. The lowered part of the face14. Excessive craving syndrome15. Mobilization of the nervous system as part of treatment. Download THE TEST. PULSE TO DEPLOYThis publication is divided into 5 chapters that try to promote what hand osteoarthritis is and how to treat it in patients. Explains the types of osteoarthritis there, how to act, and what effects it has on patients. It also refers to occupational therapy in arthrosis, as this discipline should decide it and what type of treatment to carry out. The third part of this book is based on a study conducted in the Geriatric Center on residents with arthrotic hands. The study explains the assessments they made, the goals of the treatment plan, and the treatment they conducted with the residents and the results. That's 92 pages. Authors: Ana Cristina Martin Perez. Editorial: Alcalá.My opinion as a therapist: My opinion if you have patients with hand osteoarthritis or are curious about the subject of hand osteoarthritis this book will definitely help you. In it you can find exercises for arthrosis hands and with real illustrations or very useful color photos. With this book we learn more about hand osteoarthritis, how to detect it and how to evaluate and solve it from occupational therapy. Also, its extension is not only long 90 pages, making it easy to read. Content index. PULSE FOR PROSTATIONModule I. Introduction: IntroductionModul II.
